**EazyCool™**

### **Note:**

The components listed in this catalogue are not released for use with caustic, poisonous or flammable substances. Emerson Climate Technologies cannot be held responsible for any damage caused by using these substances.

### **General Information**

Technical data provided herein is collected with scrutiny. However, errors and misprinting remain reserved. The technical data is presented for informational purposes only and they are not to be construed as warranties or guarantees, express or implied, regarding the products or services described or their use or applicability.

Technical data may be updated; should you require confirmation with respect to a specific value, please contact Emerson Climate Technologies GmbH and clearly state the information you require.

Emerson Climate Technologies GmbH and/or its affiliates (collectively "Emerson") shall not be liable for errors in the stated capacities, dimensions, etc., as well as typographic errors. Products, specifications, designs and technical data contained in this document are subject to modification by us without prior notice. Illustrations are not binding.

Emerson does not assume responsibility for the selection, use or maintenance of any product. Responsibility for proper selection, use and maintenance of any product remains solely with the purchaser and end-user.

The information given herein is based on data and tests which Emerson Climate Technologies GmbH believes to be reliable. Such information is intended for use by individuals having the appropriate technical knowledge and skills, at their own discretion and risk. Our products are designed and adapted for stationary application. When using our products in mobile applications, our products might fail. The suitability for such mobile applications has to be assured by the plant manufacturer; for this purpose appropriate tests might be necessary.

## **Scroll Compressors**

- Comfort	
• ZR Copeland Scroll™ Compressor Range for R407C and R134a	10
• ZP Copeland Scroll™ Compressor Range for R410A	14
• ZPD & ZRD Copeland Digital Scroll™ Compressor Range	18
• ZH Copeland Scroll™ Compressor Range	22
• ZPV & ZHW Copeland Scroll™ Variable Speed Compressor Range	26
• ZRH & ZBH Copeland Scroll™ Horizontal Compressor Range	28
- Refrigeration	
• ZB Copeland Scroll™ Compressor Range for Medium Temperature Refrigeration	32
• ZF Copeland Scroll™ Compressor Range for Low Temperature Refrigeration	36
• ZFD & ZBD Copeland Digital Scroll™ Compressor Range for Low and Medium Temperature Refrigeration	40
• ZO & ZOD Copeland Scroll™ Compressor Range for CO <sub>2</sub> -Subcritical Refrigeration	44
• Sound Shell for Copeland Scroll™ Compressors	46
• Booster Compressors - S-Series & Scroll	48

## **Semi-Hermetic Reciprocating Compressors**

- K and L Reciprocating Compressor Range	52
- Discus™ Reciprocating Compressor Range	56
- Copeland™ Stream With CoreSense™ Diagnostics, Semi-Hermetic Reciprocating Compressors For HFC	62
- Copeland™ Stream Digital with CoreSense™ Diagnostics for Continuous Capacity Modulation	66
- Copeland™ Stream Compressors with CoreSense™ Diagnostics for R744-Transcritical Applications	70
- S-Series Reciprocating Compressor Range	72

## **Condensing Units**

- Copeland EazyCool™ Outdoor Condensing Units with Scroll Compressors	80
- Copeland EazyCool™ Outdoor Condensing Units for Refrigeration Networks	86
- Copeland EazyCool™ ZX Outdoor Condensing Units with Scroll Compressors	90
- Copeland Scroll™ Indoor Condensing Units for Refrigeration	94
- Copeland Scroll™ Digital Receiver Unit HLR	102
- Semi-Hermetic Condensing Units DK/DL	106
- Standard Semi-Hermetic Condensing Units	110
- Condensing Units with Semi-Hermetic Discus™ Compressors	114

## **Compressor Motor Codes Table**

119

## **Controls**

- Alco Keyword Register	124
- Electrical Control Valves	127
- Electronic Controllers and Sensors	155
- Thermo™ Expansion Valves	187
- Solenoid Valves	219
- Mechanical Pressure Regulators	229
- Pressure Controls and Thermostats	237
- System Protectors and Moisture Indicators	253
- Oil Management Components	273
- Suction Accumulators, Ball Valves and Oil Test Kit	281
- Accessories & Spare Parts	285

# Pioneering Technologies For Best-In-Class Products

Emerson Climate Technologies is the world's leading provider of heating, ventilation, air conditioning and refrigeration solutions for residential, industrial and commercial applications, supporting the industry with advanced technology, technical support and training services.

For more than 80 years we have been introducing innovative technology to the market, from the first semi-hermetic and hermetic compressors in the 1940s and 1950s, plus the high efficiency Discus, air conditioning and heating scroll compressors in the 1980s and 1990s, to the new Stream semi-hermetics, the digital scroll compressor and the variable speed scroll with drive technology of today.

Based on this, we have developed an unequalled range of solutions for the refrigeration and air conditioning markets. In recent years, we have become a major solutions provider to the heat pump industry. Our range of Copeland™ brand products and Alco Controls addresses the very diverse needs of all of these markets. With scrolls and semi-hermetic compressors available for all main refrigerants, equipped with smart electronics and capable of Digital and Variable Speed Modulation, Emerson Climate Technologies has taken compression technology to new heights.

1,300 employees develop and deliver Emerson's high class technology and manufacture our products in four European plants: Belgium, Northern Ireland and the Czech Republic (2 plants). R&D centres in Welkenraedt (Belgium), Mikulov (Czech Republic) and Waiblingen (Germany) enable new developments not only to meet our customers' requirements but also to redefine the limits of technology.

With sales points in Germany, France, Spain, Italy, the United Kingdom, Scandinavia, Benelux, Poland, as well as in Eastern Europe and Russia, Emerson Climate Technologies supports its European customers in a lean and efficient manner.

Our new 2013 product catalogue gives a comprehensive overview of Copeland brand and Alco Controls products. Have a look and discover more about our broad and innovative product ranges:

- the Variable Speed technology for residential scroll compressors, with improved efficiency and optimized operating envelope,
- and the new commercial scroll compressor models (ZP236K and ZP296K) now equipped with the CoreSense™ Communications module.

To harmonize our semi-hermetic compressor ranges in terms of color and branding, we are changing the product brand and the nomenclature of the semi-hermetic compressors for the K & L-Series and the Discus-range. We will start using the well-known 'Copeland brand products' label replacing "DWM Copeland" and change the compressor color from grey to black.

More in-depth technical data is available through our user-friendly Copeland selection software tool and Alco Controls selection tool accessible via our web pages [www.emersonclimate.eu](http://www.emersonclimate.eu); For individual consultancy and service please contact your European sales office.

## Copeland Scroll™ Compressors

With the launch of scroll technology in the mid 1980s Emerson revolutionized the market setting new standards in the air conditioning industry. Since then, Copeland Scroll has become the reference not only in air conditioning but in refrigeration and heating applications too. Thousands of customers trust our proprietary technology: today, over 80 million Copeland Scrolls are installed worldwide, more than any other scroll compressor brand. Copeland Scroll compressors range from 1.5 to 40 hp and are designed to work with all the main refrigerants, including CO<sub>2</sub>. With compressors built in both vertical and horizontal versions, and capable of digital modulation, Emerson Climate Technologies has expanded the capability of scroll technology to new heights.

Additional innovations such as Enhanced Vapor Injection, the new Variable Speed scroll with drive technology for heat pump compressors or the design of the Emerson Climate Technologies sound shell give manufacturers, installers and end users the right tools to reduce the carbon footprint of their installations, optimize system design, efficiency, sound and reliability, while ensuring long equipment life time and minimizing capital and operating costs.

Applications for scroll compressors continue to grow thanks to innovation and adaptation. Industry as a whole has embraced its responsibility to put the environment first in its list of priorities, and this has led to strategic imperatives such as the need to introduce larger capacity scrolls with improved seasonal performance, modulated systems and products designed for use with “green” refrigerants such as CO<sub>2</sub>. Emerson Climate Technologies is staying abreast of these challenges by successfully further developing its technologies in each of these areas.

*Today we offer the broadest scroll product line-up in the market*

## Comfort Applications

For decades, Emerson Climate Technologies has driven advancement in the air conditioning and heat pump industry, leading the field with engineering products and systems that maximize the comfort of office and living spaces – while minimizing costs and inefficiencies.

Copeland Scroll™ compressors are designed to deliver the highest performance in residential and commercial applications. Thanks to the widest selection of air conditioning and heating optimized scroll compressors with a range from 1.5 up to 40 hp and the option to combine single compressors in even and uneven tandem and trio versions increasing overall capacity up to 120 hp per circuit, it has never been easier to match all desired applications with the highest efficiency and reliability. Whether your need is a cooling optimized, heating optimized or reversible unit, you will find the most advanced technology within our range.

One of the most important recent introductions for comfort applications has been the launch of the Variable Speed technology for scroll compressors. The combination of brushless permanent magnet motor and inverter drive, that continuously adapts the compressor speed, improves the efficiency and optimizes it throughout the operating envelope. This technology was first introduced as a solution for heat pump applications (ZHW) and will be extended in 2013 to reversible and low temperature applications, with the introduction of the ZPV R410A Variable Speed Scroll.

A further innovation has been the introduction of ZH compressors with Enhanced Vapor Injection technology. This technology, when applied in space heating and tap water production, permits the replacement of traditional boilers without changing the radiators. Additional benefits are the reduction of the discharge temperature and the extension of the operating envelope for the production of high temperature water. ZH compressors are available for R407C and also for R410A - the latter option for both residential and commercial applications - allowing OEMs to design more efficient and compact equipment.

New commercial scroll compressor models such as ZP236K and ZP296K are now equipped with the CoreSense™ Communications module. This added feature unlocks advanced diagnostics, protection and communication in Copeland compressors and sends data to the main system controller via modbus RS485.

# ZR Copeland Scroll™ Compressor Range for R407C and R134a

ZR Copeland Scroll compressors, for R407C and R134a, for comfort and process/precision cooling applications.

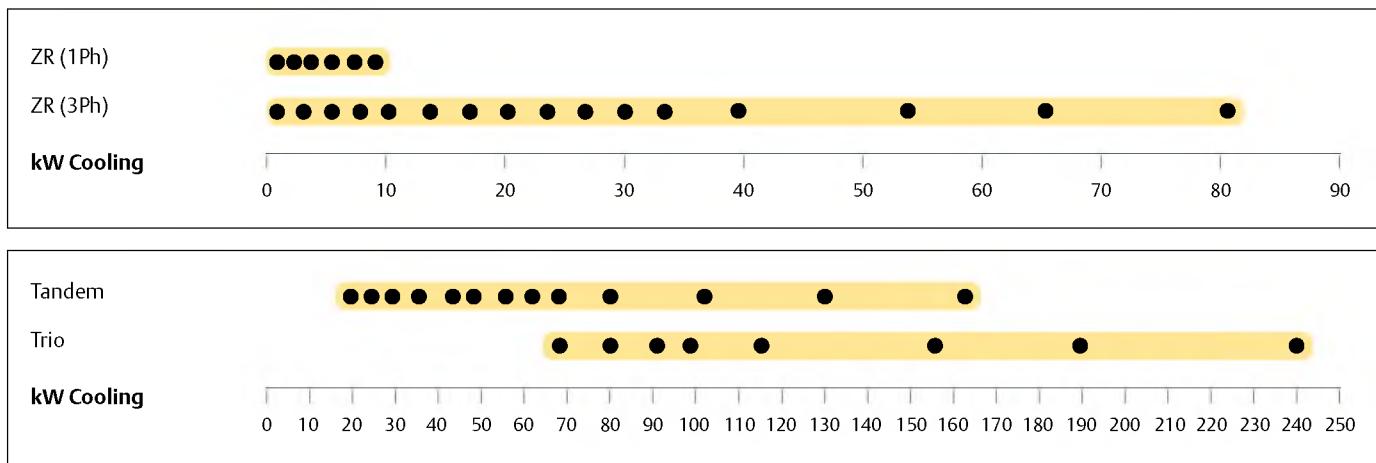

Applied in the air conditioning and comfort industry for water chillers, rooftops and close control unit applications, scroll compressors are now the most used compression technology replacing reciprocating and screw compressors due to its undeniable superiority. Several, fully Copeland™ qualified, multiple compressor assemblies (tandem and trio) are available to allow the use of Copeland Scroll compressors into large capacity systems (ex. up to 500kW air cooled chillers) able to deliver optimal comfort, low operating cost with higher seasonal efficiency (ESEER).

The range of products goes from the ZR18 (1.5Hp) to the ZR380 (30hp)

ZR Scroll Compressor

## ZR Scroll Compressor Line-up

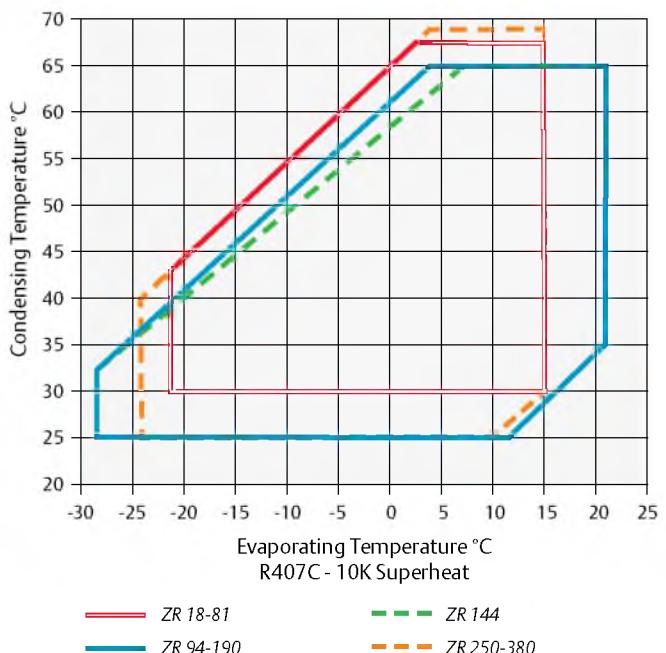

## Features and Benefits

- Copeland Scroll axial and radial compliance for superior reliability and efficiency
- Wide scroll line-up for R407C and R134a
- Low TEWI (Total Equivalent Warming Impact)
- Low sound and vibration level
- Low oil circulation rate
- Copeland qualified tandem and trio configurations for superior seasonal efficiency (ESEER)

## Maximum Allowable Pressure (PS)

- ZR18 to ZR81:  
Low Side PS 20 bar(g) / High Side PS 29.5 bar(g)
- ZR94 to ZR380:  
Low Side PS 20 bar(g) / High Side PS 32 bar(g)

## Operating Envelope R407C

# ZP Copeland Scroll™ Compressor Range for R410A

ZP Copeland Scroll compressors, for R410A, for comfort and process/precision cooling applications.

Emerson Climate Technologies has been the pioneer in launching the first complete line-up of R410A commercial scroll compressors. The combination of Copeland Scroll technology and the advantages of the R410A refrigerant enables system manufacturers (OEMs) to optimize the cost and efficiency of their systems.

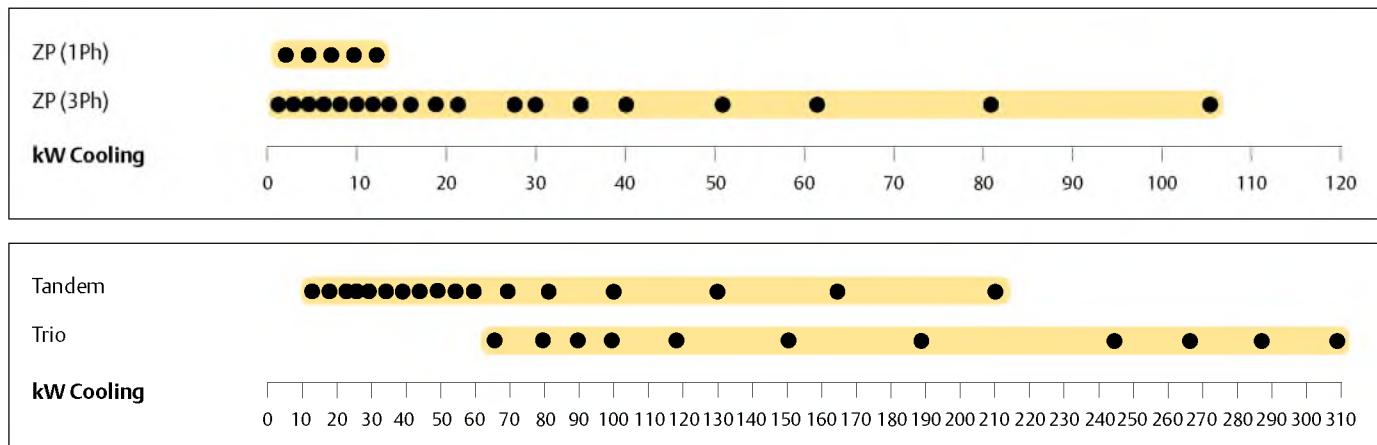

ZP Copeland Scroll compressors are perfectly suitable for air cooled chiller systems up to 600kW (720kW if water cooled) featuring high comfort and superior seasonal efficiency (ESEER). Whether used in stand-alone, tandem or trio configurations, the broad ZP Copeland Scroll line-up meets today's market requirements with unmatched flexibility, efficiency and proven reliability.

The second generation of Copeland™ commercial scrolls for R410A now features the new ZP236K (20hp) & ZP296K (25hp) with CoreSense™ Communications: this added feature unlocks advanced diagnostics, protection and communication in Copeland compressors and sends data to the main system controller via modbus RS485.

ZP Scroll Compressor

## ZP Scroll Compressor Line-up

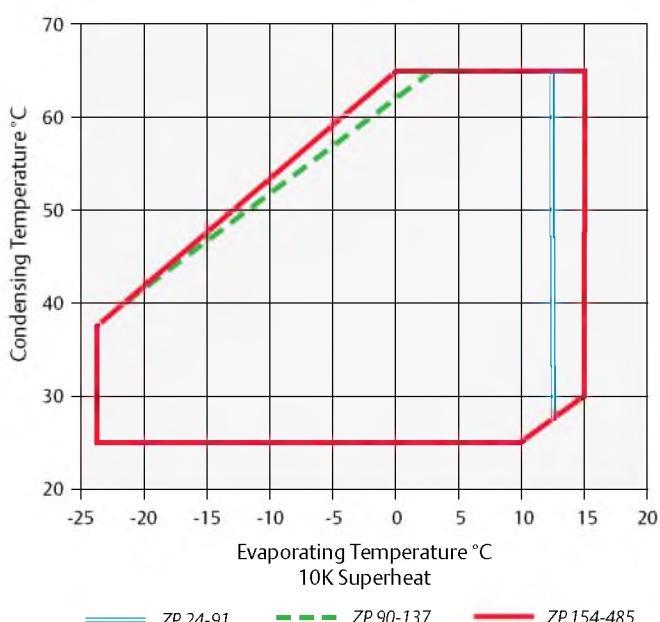

Conditions EN12900: Evaporating 5°C, Condensing 50°C, Superheat 10K, Subcooling 0K

## Features and Benefits

- Copeland qualified tandem and trio (now also uneven) configurations for superior seasonal efficiency (ESEER and SCOP)
- Copeland Scroll axial and radial compliance for superior reliability and efficiency
- Extended 5K operating envelope suitable for HP applications
- Low TEWI (Total Equivalent Warming Impact)
- Wide scroll line-up for R410A
- Low sound and vibration level
- Low oil circulation rate

## Operating Envelope R410A

## Maximum Allowable Pressure (PS)

- ZP24 to ZP91:  
Low Side PS 28 bar(g) / High Side PS 43 bar(g)
- ZP90 to ZP485:  
Low Side PS 29.5 bar(g) / High Side PS 45 bar(g)

ZPD & ZRD Copeland Digital Scroll™ Compressor Range

## Stepless capacity modulation in air conditioning applications: Flexible solution for R407C and R410A.

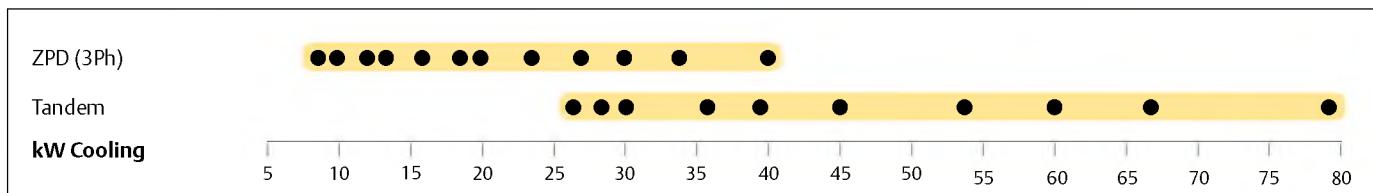

In many cooling and heating systems, the load and the operating conditions vary over a wide range thus requiring the use of capacity modulation. Digital Scroll assures stepless modulation down to 10% of the nominal capacity, enabling precise temperature control, superior comfort and energy saving.

Digital Scroll compressors are the preferred choice for process cooling, refrigeration racks, condensing units, VRF, rooftop and air handling unit systems.

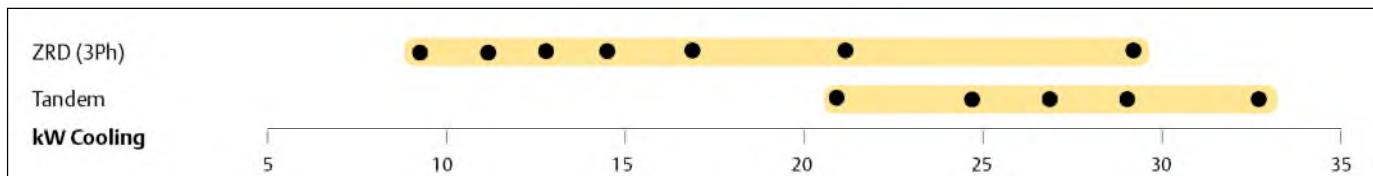

ZPD & ZRD Copeland Digital  
Scroll Compressor

ZPD Digital Scroll Compressor Line-up R410A

ZRD Digital Scroll Compressor Line-up R407C

Conditions EN12900: Evaporating 5°C. Condensing 50°C. Superheat 10K. Subcooling 0K

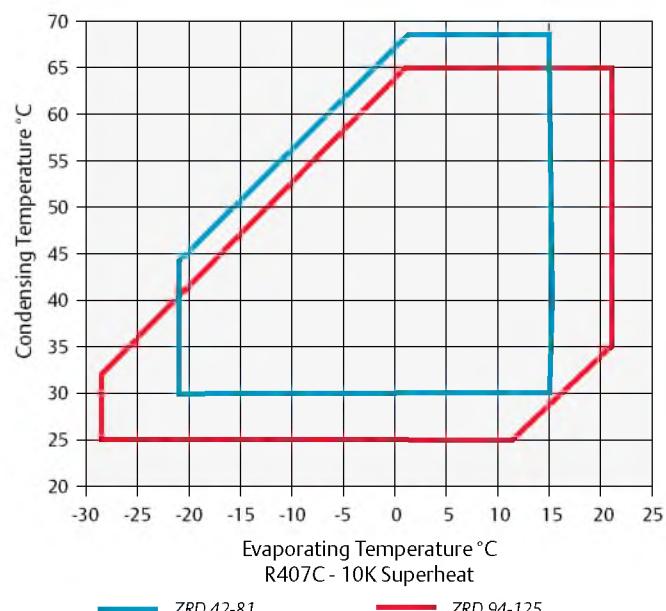

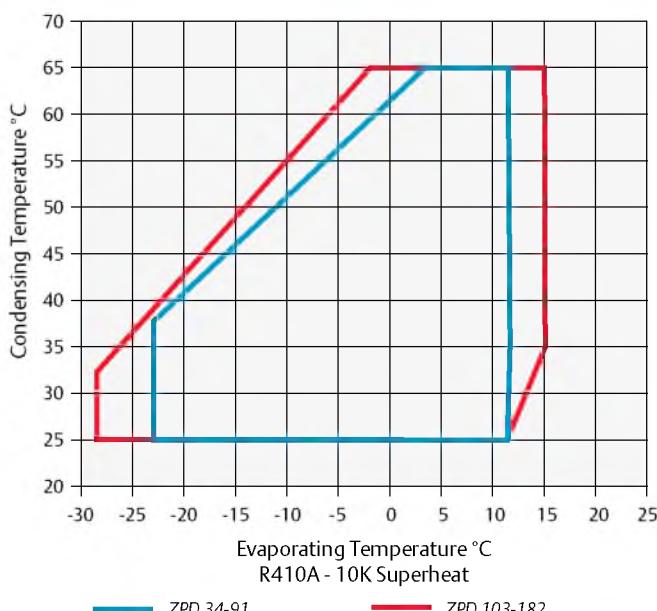

#### **Features and Benefits**

- Wide modulation range from 10% to 100% for immediate load adjustment, close temperature comfort, optimal comfort
  - No complex electronics, a quasi-drop-in solution for fast time to market, no EMI/EMC problems, easy installation and maintenance
  - No impact on system mechanical balance: no vibration and resonance phenomenon, no frame / piping redesign necessary

#### **Maximum Allowable Pressure (PS)**

- Digital ZRD42 to ZRD81:  
Low Side PS 20bar(g) / High Side PS 29.5 bar(g)
  - Digital ZRD94 to ZRD125:  
Low Side PS 20bar(g) / High Side PS 32 bar(g)
  - Digital ZPD34 to ZPD91:  
Low Side PS 28 bar(g) / High Side PS 43 bar(g)
  - Digital ZPD103 to ZPD182:  
Low Side PS 29.5 bar(g) / High Side PS 45 bar(g)

# ZH Copeland Scroll™ Compressor Range

## ZH Copeland Scroll Compressor Range

The ZH compressor range is optimized for reversible and heat pump applications. In addition to the existing R407C range, a complete new range optimized for R410A has been developed. Both ranges are based on three platform sizes and cover a capacity of 4kW to 38kW.

ZH heating compressors have been optimized for reversible heating systems, they deliver higher capacity and efficiency at low evaporating (heat source) temperatures and are therefore better adapted to heating requirements than standard air conditioning compressors. Due to their larger operating map they also require less additional heating (electrical or gas) to cover the full heating demand on the coldest days and therefore further improve the system seasonal efficiency.

### ZH Scroll Compressors with Enhanced Vapor Injection

ZH heating compressors with Enhanced Vapor Injection have been further optimized to ensure best-in-class performances in dedicated heating applications. This technology allows replacement of traditional boilers in new building and retrofit applications, without the need of substituting existing heating elements in the building.

ZH Copeland Scroll heating compressors with Enhanced Vapor Injection have an additional port to inject vapor within the compression process. This improves system performances by increasing the heating capacity for a given compressor displacement. Additional benefits are the reduction of the gas discharge temperature and the extension of the operating envelope which enable the production of high temperature water at all working conditions.

ZHI heating compressors reach the same high standards of durability and reliability as other Copeland Scroll compressors. This includes the ability to handle relatively large amounts of liquid, which is known to damage or cause compressor failures. Fewer moving parts, robust running gear and low vibration due to balanced compression mechanism make the ZH range of Copeland Scroll compressors the most reliable solution available in the heat pump market.

ZH Scroll Compressors

## ZH Nomenclature Guidelines

### ZH\*\*K4E

Qualified for **R407C/R134a**

Without Enhanced Vapor Injection - \*\* capacity in Btu/h

### ZH\*\*KVE

Qualified for **R407C** only

Enhanced Vapor Injection – \*\* capacity in kW

### ZH\*\*K1P

Qualified for **R410A** only

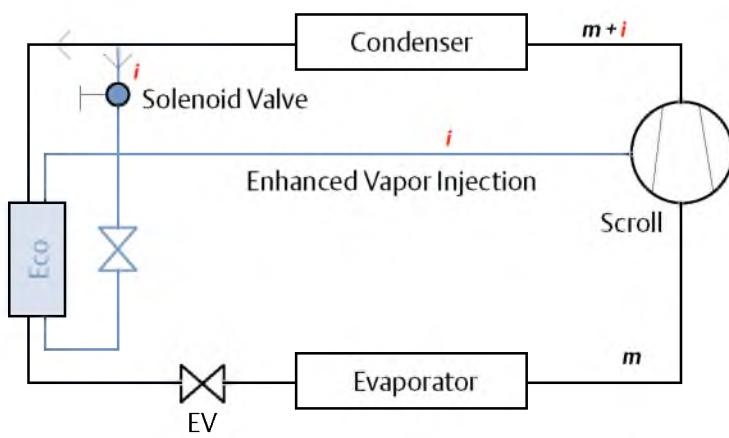

Without Enhanced Vapor Injection – \*\* capacity in kW

### ZHI\*\*K1P

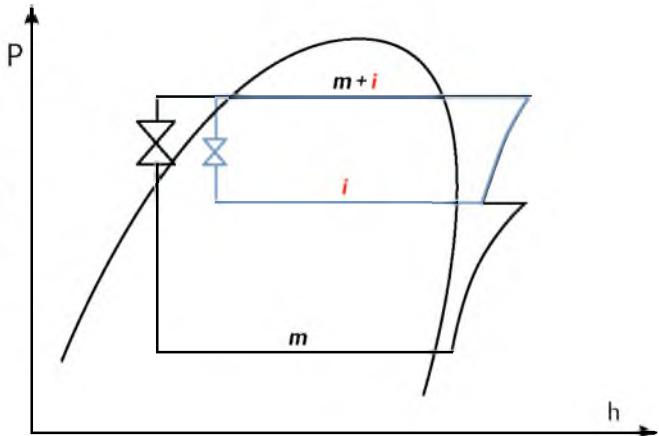

Qualified for **R410A** only

Enhanced Vapor Injection – \*\* capacity in kW

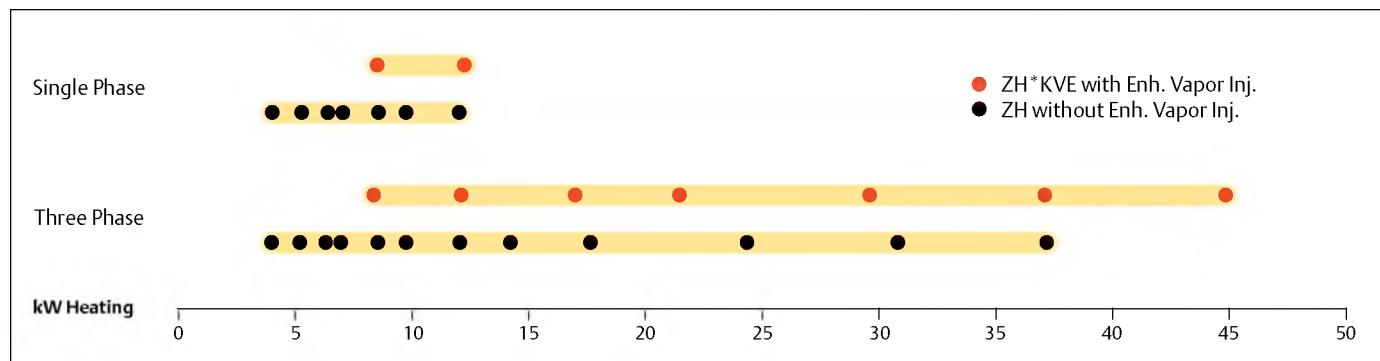

## Enhanced Vapor Injection: System Design

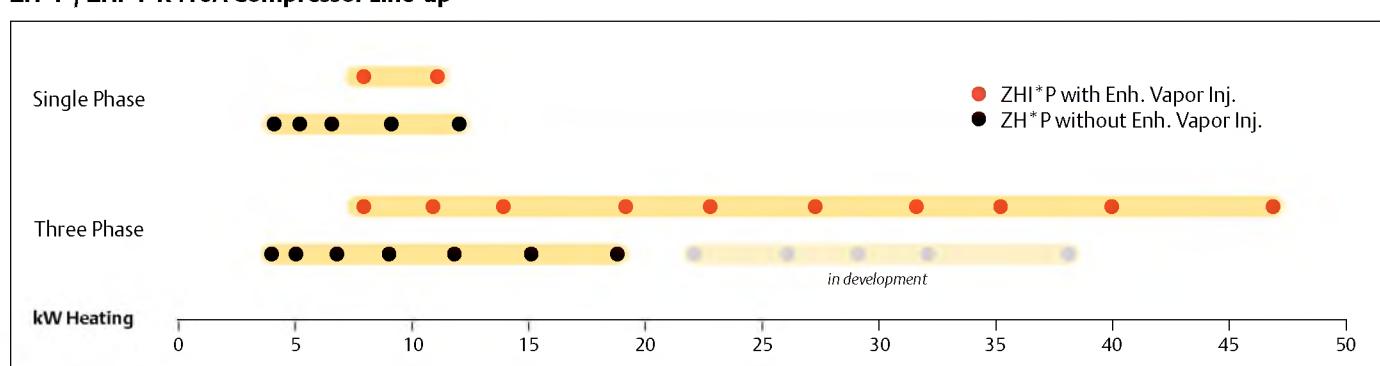

## Enhanced Vapor Injection: Enthalpy Diagram

## ZH / ZH\*KVE R407C Compressor Line-up

## ZH\*P / ZHI\*P R410A Compressor Line-up

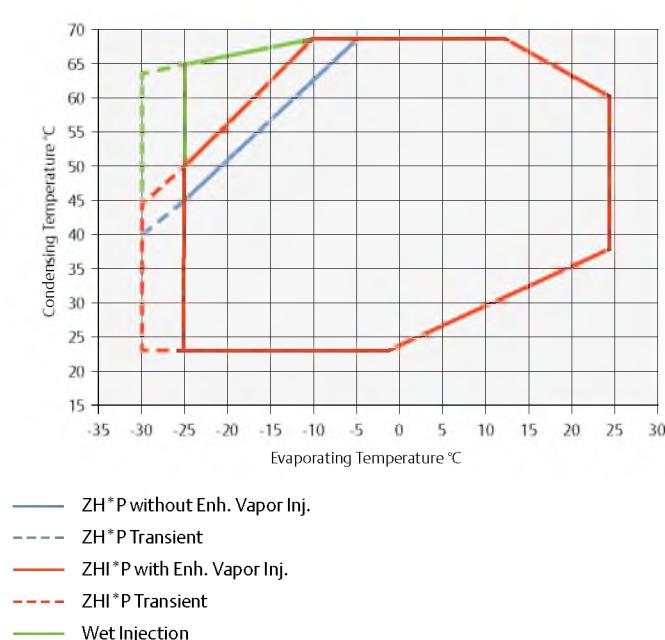

### Features and Benefits

- Copeland Scroll axial and radial compliance for high reliability
- High efficiency and increased heating capacity
- High water temperature for all applications
- Low sound and low vibration level
- Tandem combination for superior seasonal efficiency
- Enhanced Vapor Injection technology for best seasonal efficiency

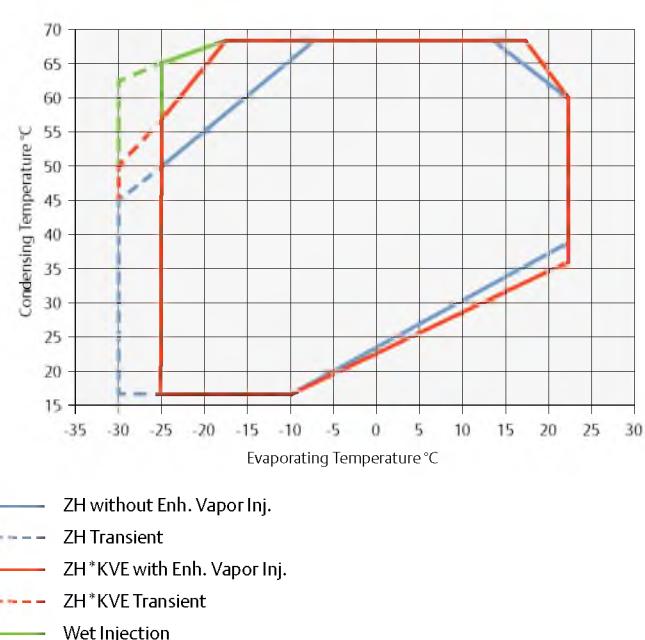

### Maximum Allowable Pressure (PS)

- ZH(I)\*\*K1P:  
Low Side PS 28 bar(g) / High Side PS 45 bar(g)
- ZH12K4E to ZH45K4E:  
Low Side PS 20 bar(g) / High Side PS 32 bar(g)
- ZH56K4E to ZH11M4E:  
Low Side PS 22.6 bar(g) / High Side PS 32 bar(g)
- ZH09KVE to ZH18KVE:  
Low Side PS 20 bar(g) / High Side PS 32 bar(g)
- ZH24KVE to ZH48KVE:  
Low Side PS 22.6 bar(g) / High Side PS 32 bar(g)

### Operating Envelope R410A Heating

### Operating Envelope R407C Heating

Refer to Emerson's Select 7.7 selection software for individual model operating envelopes and other refrigerants.

## ZPV & ZHW Copeland Scroll™ Variable Speed Compressor Range for R410A, with inverter drive

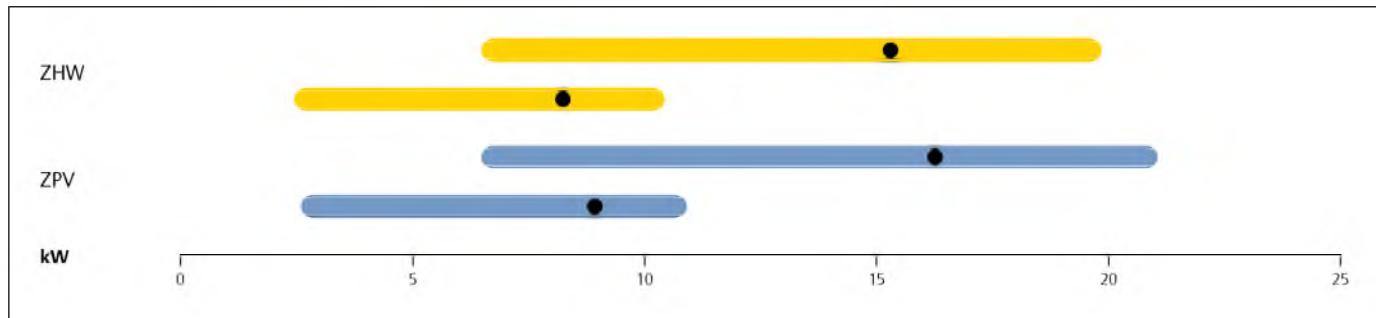

ZPV and ZHW Variable Speed scroll compressors for R410A, for outstanding performance for cooling and heating applications.

The new Emerson Climate Technologies solution for variable speed applications with capacity modulated compressors. ZPV and ZHW compressors deliver outstanding performances, both in new building and retrofit applications. Variable Speed Copeland Scroll compressors feature a state-of-the-art brushless permanent magnet motor matched with a highly efficient drive and vapor injection technology (ZHW only). In addition to Copeland market-proven robustness, ZPV and ZHW compressors with the qualified inverter drive meet and exceed the level of reliability expected for these demanding applications.

ZHW Copeland Scroll Variable Speed Compressor and Inverter Drive

### ZPV & ZHW Variable Speed Scroll Compressor Line-up

Cooling kW @ (5/50) for ZPV, Heating kW @ (-7/50) for ZHW

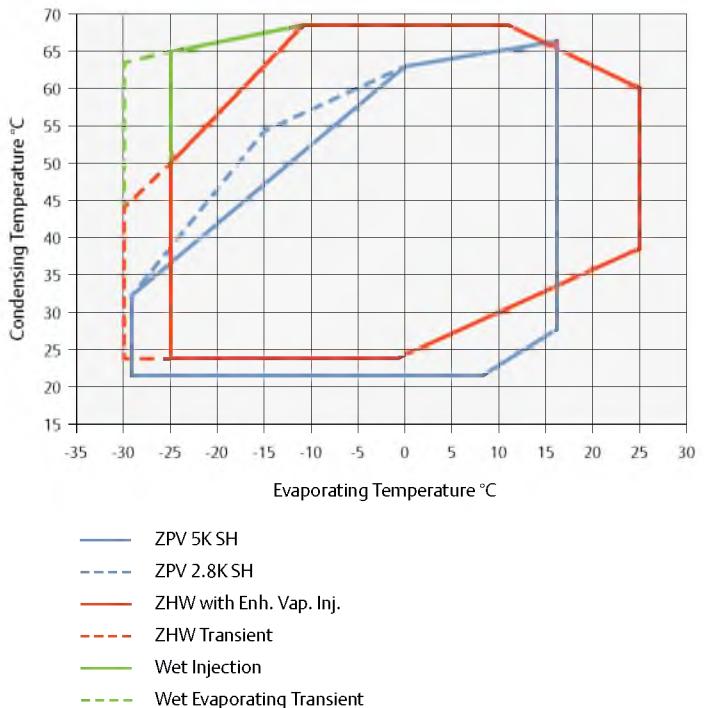

### Features and Benefits

- Highest efficiency throughout the operating envelope and speed range
- Envelope and speed management information for the system controller (real-time communication via Modbus RS485)
- Enhanced Vapor Injection technology for best seasonal efficiency (ZHW)
- High water temperature for all applications (ZHW)
- Compliance with electromagnetic-compatibility (EMC) and electromagnetic-interference (EMI) requirements for residential applications (VDE)
- Wide speed range 30-117Hz
- Mutually optimized and qualified scroll and drive

### Maximum Allowable Pressure (PS)

- ZHW:  
Low Side PS 28 bar(g) / High Side PS 45 bar(g)
- ZPV:  
Low Side PS 28 bar(g) / High Side PS 43 bar(g)

### Operating Envelope R410A

## ZRH & ZBH Copeland Scroll™ Horizontal Compressor Range

for R407C and R134a, for the specific needs of transport air conditioning.

Air conditioning for passenger comfort is a pre-requisite in today's public transport vehicles. At the same time, maximization of passenger space and streamlining of high speed trains increasingly impose limitations on height.

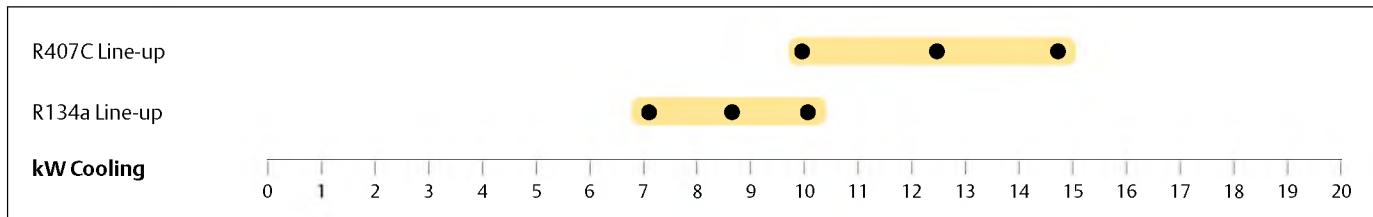

ZRH compressors are based on the unique Copeland Scroll design and provide the same reliability as a standard Copeland Scroll. The addition of an oil pump covers the specific needs of transport air conditioning and of horizontal compressor arrangement in general.

The low profile design and modulation capabilities of the ZRH compressor range are the ideal response to these market needs.

Horizontal Scroll Compressors

### ZRH Scroll Compressors Line-up R407C

EN12900: Evaporating 5°C, Condensing 50°C, Superheat 10K, Subcooling 0K

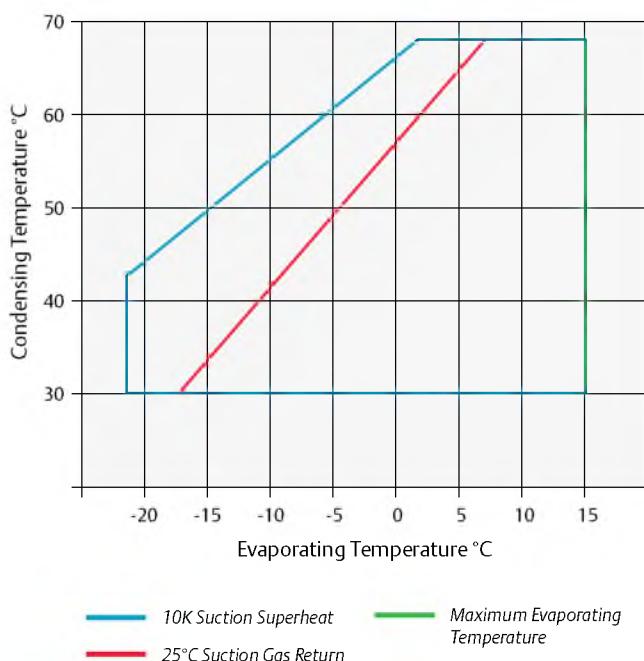

### Features and Benefits

- Compactness and low weight
- Horizontal design with less than 250mm height
- Copeland Scroll compliance for superior reliability and efficiency
- Additional oil-pump
- Reduction of potential risk of refrigerant leakage through the drive shaft sealing
- Capacity modulation from 70% to 150% for ZRHV/ZBHV

### Maximum Allowable Pressure (PS)

- 29.5 bar

### Operating Envelope R407C

Suction Gas Return 10°C / Subcooling 0K

## Refrigeration Applications

Emerson Climate Technologies offers a wide range of solutions for commercial refrigeration applications. With its long-lasting expertise in semi-hermetic reciprocating compressor technology as well as in scroll technology, we can meet the requirements for most applications - at the small end just like at the large end of commercial refrigeration.

Completed by the various offerings in the segment of condensing units, Emerson Climate Technologies is able to offer the best solution and performance, whether you are looking for applications in foodservice or processing, supermarkets, hypermarkets, petrol stations or refrigerated warehousing.

Emerson Climate Technologies' prime focus for its semi-hermetic reciprocating technology is at the large end of commercial refrigeration. Here aspects such as reliability, serviceability and capacity modulation are of importance and they are perfectly provided by Emerson Climate Technologies' semi-hermetic reciprocating compressors. Innovations like the Discus™ and Stream technologies, digital modulation and CoreSense™ Diagnostics for advanced protection and preventive maintenance keep semi-hermetic at the forefront of compressor technology.

Especially when compact equipment, energy efficiency and reliability are musts, the scroll technology is the preferred choice for refrigeration applications. With developments such as vapor injection and digital modulation, scroll has become the leading technology and is widely recognized in the refrigeration market.

Whatever the chosen technology and product solution, Emerson Climate Technologies' range meets the specific refrigeration needs covering the entire spectrum of medium and low temperature applications whether using standard HFCs, low GWP or natural refrigerants.

## ZB Copeland Scroll™ Compressor Range for Medium Temperature Refrigeration using R404A, R407F, R407A/C, R134a and R22

Emerson Climate Technologies offers ZB compressors with a wide cooling capacity range starting from 3kW to 54kW. It includes digital compressors models that offer continuous capacity modulation technology.

Copeland Scroll compressors have 3 times less moving parts than reciprocating compressors and feature a scroll compliance mechanism which makes them particularly robust and reliable under severe conditions including liquid slugging.

They have the advantage of light weight and compactness, making them ideal for the usage in condensing units, compact refrigeration systems or special process units.

The Summit Series from 7 to 15 hp is designed to provide seasonal efficiencies 15% higher than traditional semi-hermetic compressors. These compressors are extremely quiet and can be fitted with an external sound shell for an additional 10 dBA sound reduction, which makes them best choice for refrigeration applications in urban and domestic areas.

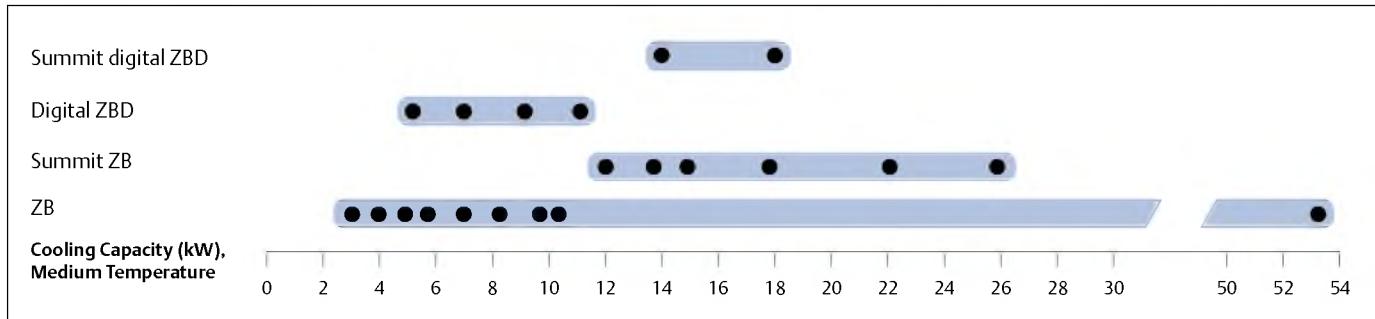

The ZB range also features ZB220 (30hp), the largest refrigeration scroll available on the market. These compressors are qualified for R404A, R407F, R407A/C, R134a and R22.

For more details on Digital models please refer to page 40 in the catalogue.

ZB Compressor for Medium Temperature Refrigeration with and without sound shell

### ZB and ZBD Compressor Line-up

Conditions EN12900, R404A: Evaporating -10°C, Condensing 45°C, Suction Gas Temperature 20°C, Subcooling 0K

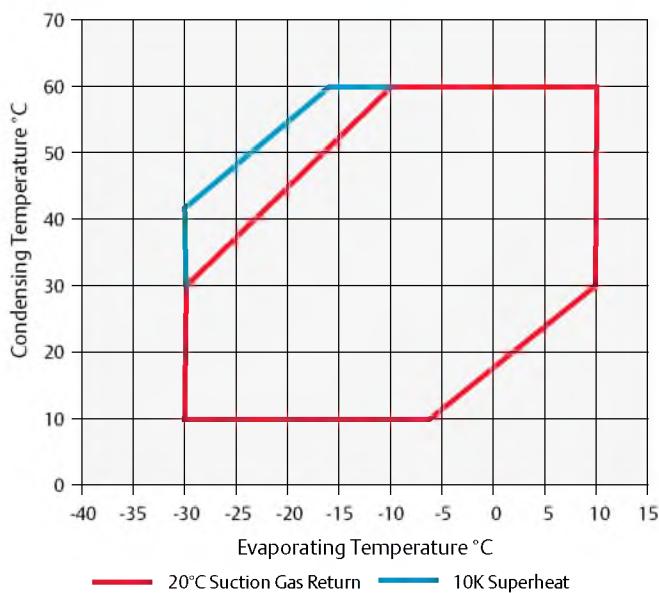

### Features and Benefits

- Copeland Scroll™ axial and radial compliance for superior reliability and efficiency
- Wide operating envelope with 10°C condensing limit and fast pull down capabilities
- High seasonal efficiencies as scrolls are designed at the condition where equipment runs most of the time
- Light weight and compactness, more than half the weight of equivalent semi-hermetic compressors
- Availability of optional sound shell on all models providing an additional 10 dBA sound attenuation for silent operation
- Includes 6 digital scroll compressor models for simple, stepless 10 to 100% capacity modulation
- One model for multi refrigerants R404A, R407F, R407A/C, R134a and R22

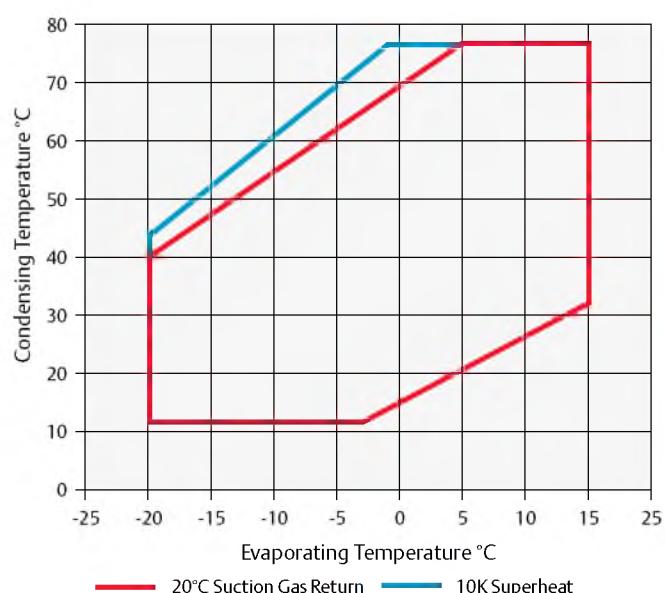

### Maximum Allowable Pressure (PS)

- ZB15 to ZB45:  
Low Side PS 21 bar(g) / High Side PS 28.8 bar(g)
- ZB50 to ZB220:  
Low Side PS 22.6 bar(g) / High Side PS 32 bar(g)
- Digital ZBD:  
Low Side PS 22.6 bar(g) / High Side PS 32 bar(g)

## Operating Envelope R404A

## Operating Envelope R134a

Refer to Emerson's Select 7.7 selection software for individual model operating envelopes and other refrigerants.

## ZF Copeland Scroll™ Compressor Range for Low Temperature Refrigeration using R404A, R407F, R407A and R22

Emerson Climate Technologies developed the ZF range to provide the best performance in low temperature. The range has a wide application envelope as it can operate from -40°C evaporating temperature to +7°C. They have been optimized in their design to perfectly fit frozen food application requirements. Thanks to their scroll compliance mechanism, these scroll compressors feature particularly high tolerance to liquid slugging.

The range consists of:

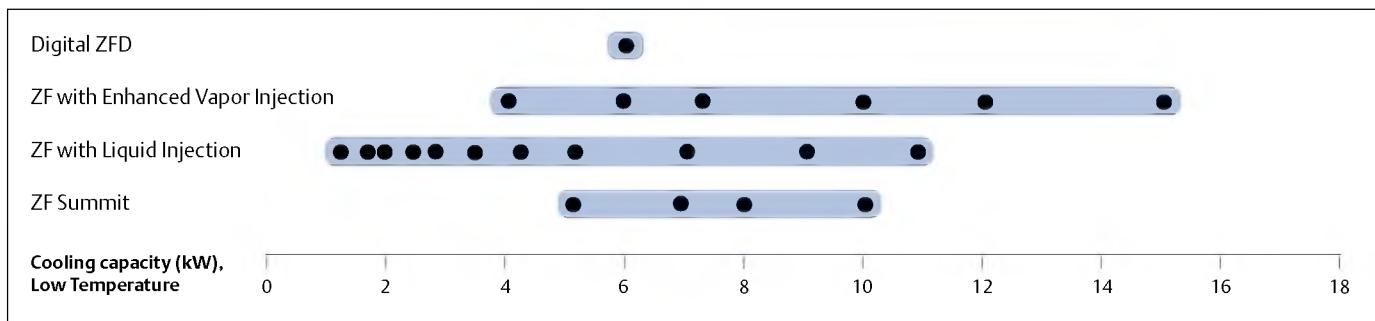

- The ZF\*KCE models that operate with liquid injection in order to control discharge temperature and increase the operating envelope.
- The ZF\*KVE models that are optimized for vapor injection with use of a sub-cooler. This boosts refrigeration system's cooling capacity and efficiency.
- The Summit ZF\* K6E models that operate both with liquid injection or vapor injection.

ZF Compressor for Low Temperature Refrigeration with and without sound shell

These compressors are qualified for R404A, R407F, R407A, R507, R22 and R134a for certain models. For more details on Digital Scroll™ model please refer to page 40 in the catalogue.

### ZF and ZFD Compressor Line-up

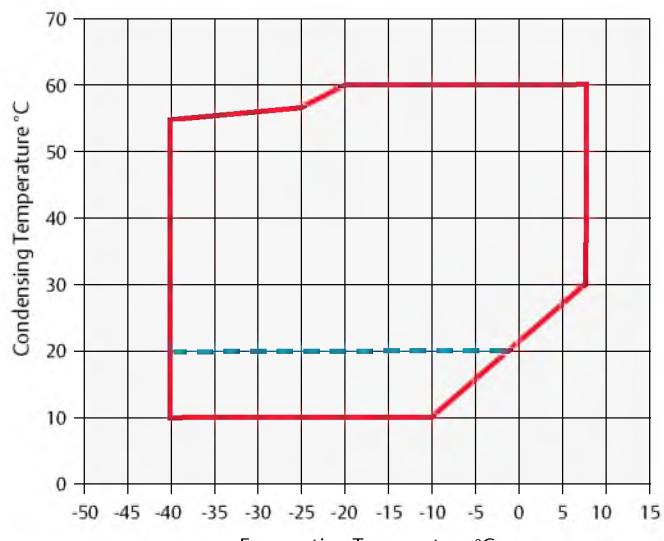

Conditions 12900, R404A: Evaporating -35°C, Condensing 40°C, Suction Gas Temperature 20°C, Subcooling 0K

### Features and Benefits

- Wide operating envelope with 10°C low condensing temperature to minimize energy consumption
- One model for multi-refrigerants
- Light weight and compactness, more than half the weight of equivalent semi-hermetic compressor
- Optional Sound Shell allowing 10 dBA sound attenuation.
- ZF models with liquid injection
  - Easy, efficient and reliable injection via Discharge Temperature Control Valve (DTC) on the smaller models
- ZF models with Enhanced Vapor Injection
  - Seasonal efficiencies compared to Emerson's best semi-hermetic compressors
  - Improved system capacity and efficiency by 40% and 25% respectively, making them the most efficient compressors on the market.
  - Possibility to reduce the equipment and component sizes by using smaller compressors

### Operating Envelope R404A

Refer to Emerson's Select 7.7 selection software for individual model operating envelopes and other refrigerants.

### Maximum Allowable Pressure (PS)

- ZF06 to ZF18 (K4E/KVE):
  - Low Side PS 21 bar(g) / High Side PS 28.8 bar(g)
- ZF24 to ZF48 (K4E/KVE/K6E):
  - Low Side PS 22.6 bar(g) / High Side PS 32 bar(g)
- Digital ZFD:
  - Low Side PS 19 bar(g) / High Side PS 28 bar(g)

# ZFD & ZBD Copeland Scroll™ Digital Range for Medium and Low Temperature Refrigeration

Copeland Scroll Digital ZBD and ZFD compressors provide stepless continuous capacity modulation in medium and low temperature refrigeration applications.

Based on the unique Copeland Compliant Scroll™ design, the Digital modulation operates on a simple mechanism. Capacity control is achieved by separating the scroll sets axially over a small period of time. It is a simple mechanical solution allowing precise temperature control and system efficiency.

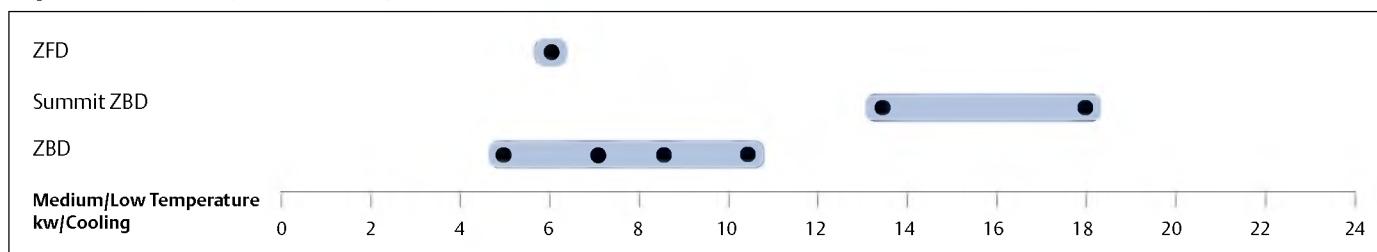

Digital Scroll™ technology is a simple modulation solution that can easily and quickly be implemented into any existing system design as no other components are required.

Digital Scroll technology provides continuous, stepless modulation from 10% to 100% with no operating envelope restriction. As a result, system pressures and temperatures are tightly controlled. These compressors provide optimum performance for condensing units, refrigeration packs, process and agricultural units.

The Digital Scroll range consists of:

- ZBD models dedicated to medium temperature applications
- ZFD models with vapor injection for low temperature applications
- ZOD model designed for use in R744 (CO<sub>2</sub>) - see page 44

## Digital Scroll™ Compressor Line-up

Digital ZBD R404A Evaporating -10°C, Condensing 45°C, Suction Gas Temperature 20°C, Subcooling 0K

Digital ZFD: R404A Evaporating -35°C, Condensing 40°C, Suction Gas Temperature 20°C, Subcooling 0K

## Features and Benefits

- Continuous modulation from 10% to 100% ensuring a perfect match of capacity and power to the desired load
- An economical and reliable alternative to variable speed drive
- Precise suction pressure control with associated energy savings
- Food quality is maintained by stable evaporating temperatures in the refrigerated areas
- Longer lasting refrigeration equipment due to fewer compressor cycling
- Quick and easy integration into refrigeration equipment, similar to any other scroll compressor
- Availability of optional sound shell on all models providing an additional 10dBA sound attenuation for silent operation
- Availability of Emerson's series of controllers that operate the Digital Scroll™ compressor

## Maximum Allowable Pressure (PS)

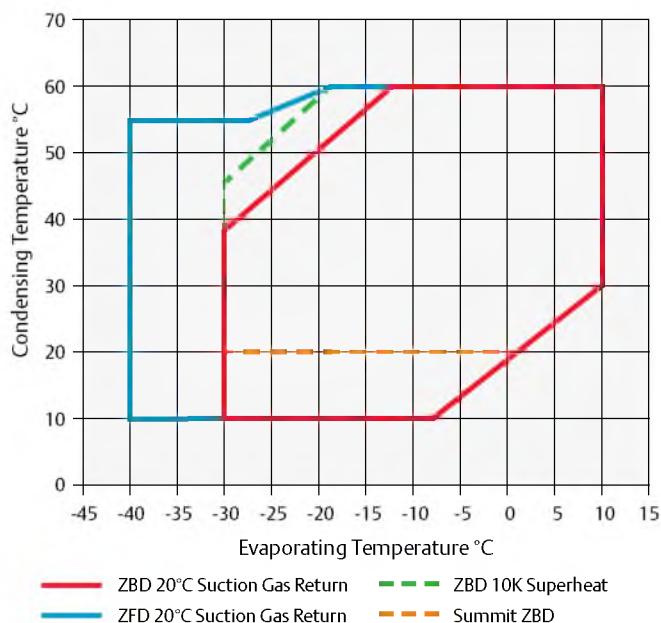

- Digital ZBD:  
Low Side PS 22.6 bar(g) / High Side PS 32 bar(g)
- Digital ZFD:  
Low Side PS 19 bar(g) / High Side PS 28 bar(g)

Copeland Scroll Digital for Low and Medium Temperature Refrigeration with and without sound shell

These compressors are qualified for R404A, R407A, R407F for some models and R22 for ZBD only.

## Operating Envelope R404A

Refer to Emerson's Select 7.7 selection software for individual model operating envelopes and other refrigerants.

## ZO & ZOD Copeland Scroll™ Compressor Range for CO<sub>2</sub>-Subcritical Refrigeration

ZO Copeland Scroll Compressors have been designed for use in R744 (CO<sub>2</sub>) low temperature refrigeration systems. These compressors are suitable for usage in CO<sub>2</sub>-subcritical cascade and booster systems.

Increasing environmental concerns about potential direct emissions from HFC-based refrigeration systems into the atmosphere have led to the revival of R744 in parts of the European refrigeration market. Regionally, this trend is reinforced by legislation and taxation schemes which favor the usage of refrigerant R744.

In comparison with HFC refrigerants, the specific properties of R744 require changes in the design of the refrigeration system. The ZO range of Copeland Scroll compressors has been particularly designed to exploit the characteristics of the R744 refrigeration system. Efficiency, reliability and liquid handling advantages of the Copeland Scroll technology equally apply.

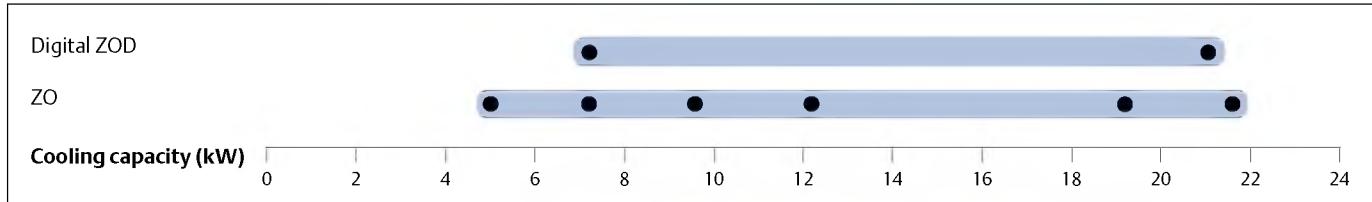

The optimized design of ZO compressors effectively address the challenges of R744 systems i.e., high pressure levels, higher mass flow for a given displacement while securing proper lubrication.

The range consists of 6 models including 1 digital model for 10 to 100% continuous cooling capacity modulation

ZO Compressor for Low Temperature Refrigeration

### ZO and ZOD Compressor Line-up

Conditions EN12900 R744: Evaporating -35°C, Condensing -5°C, Suction Superheat 10K, Subcooling 0K

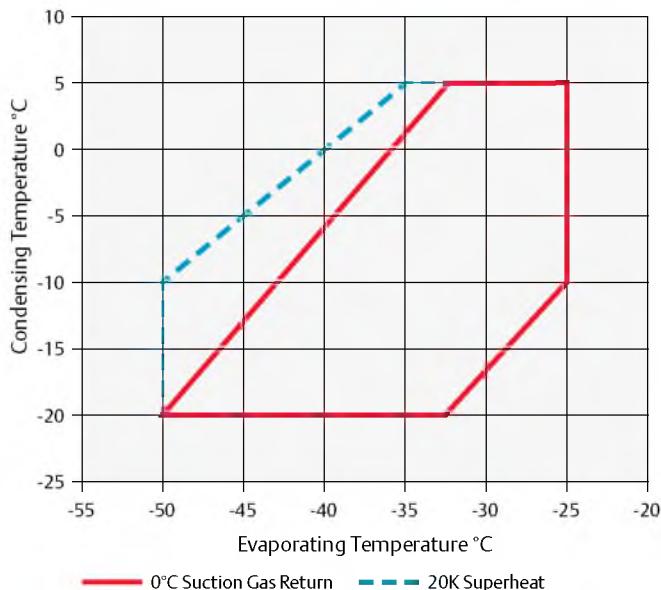

### Features and Benefits

- Optimized for high efficiency in CO<sub>2</sub>-subcritical cascade and booster systems
- High condensing temperature limit allowing for optimized overall system design
- Compact design minimizing required machine room space
- Half the weight of equivalent semi-hermetic compressors
- Optional Sound Shell allowing 10 dBA sound attenuation
- High bearing reliability and lubrication of all critical parts under all conditions including liquid slugging
- Availability of a digital model offering simple, stepless 10 to 100% capacity modulation

### Maximum Allowable Pressure (PS)

- ZO:  
Low Side PS 28 bar(g) / High Side PS 43 bar(g)
- Digital ZOD:  
Low Side PS 28 bar(g) / High Side PS 43 bar(g)

### Operating Envelope R744

Refer to Emerson's Select 7.7 selection software for individual model operating envelopes and other refrigerants.

# Sound Shell for Copeland Scroll™ Compressors

## Quiet Operation in Sound Critical Environment

Environmental noise has become a serious problem that can lead to potential contentious situations. It is particularly true for refrigeration applications where kitchen equipment or compressor packs are often source of disturbing noise in domestic areas. Emerson Climate Technologies put sound minimisation at the centre of any of its new compressor development along reliability, seasonal efficiency, and size and weight reduction.

A large portion of equipment acoustic emissions come from condensers and compressors and in some critical sound sensitive applications the refrigeration installations need to be acoustically insulated. Simple solutions are now available to contain sound emissions. Emerson Climate Technologies has developed a dedicated Sound Shell for all Copeland Scroll compressors from 2–15 hp. It completely encapsulates the compressor, minimizing sound leaks while cooling performance remains uncompromised.

Groundbreaking design techniques and materials, derived from the automotive industry, were utilized to design the Sound Shell. The use of low pressure reaction injection moulded parts (top cap cover, terminal box cover and compressor base plate) allows a 10–12 dBA sound attenuation.

It is a significant improvement over conventional sound jackets available from other suppliers that reduce sound by 3–6 dBA depending on the application. Particular attention was also paid in the design stage to ensure ease of mounting in retrofit, service and new installation situations.

## Booster Compressors - S-Series and Scroll

Compressors for the low stage in cascade or booster refrigeration systems are available as part of the semi-hermetic reciprocating compressors from 7.5 to 30 hp and as part of the scroll range from 2 to 15 hp. These provide optimized energy efficiency for refrigeration systems operating at low evaporating temperatures.

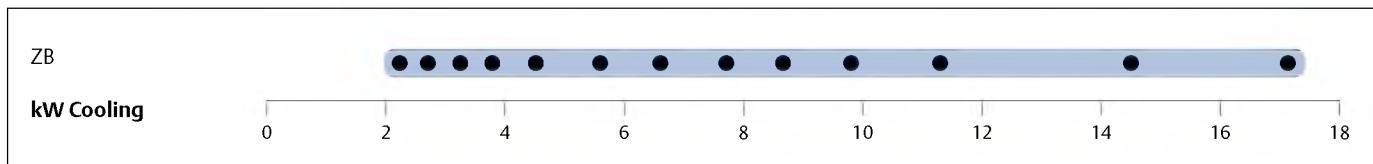

### S-Series Booster Compressor Line-up

Conditions R404A: Evaporating -35°C, Condensing -10°C, Suction Gas Return 20°C, Subcooling 0K

### Scroll Booster Compressor Line-up

Conditions R404A: Evaporating -35°C, Condensing -10°C, Suction Gas Return 20°C, Subcooling 0K

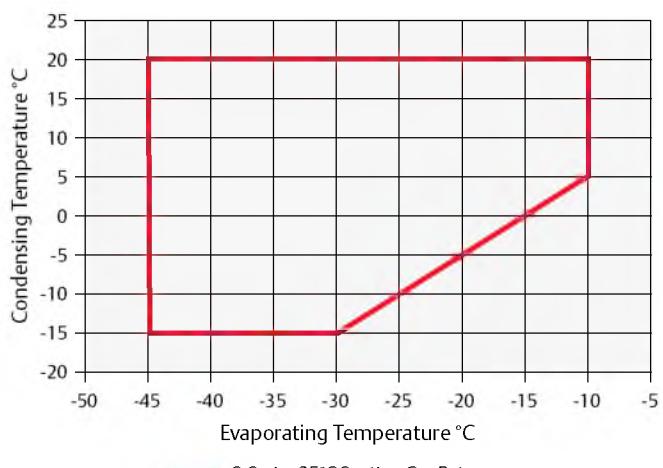

### Features and Benefits - S-Series Booster

- Positive displacement oil pump for high oil feeding pressure ensuring good lubrication and bearing cooling
- PTFE coated bearings for especially low friction and good protection at start up
- Aluminum piston with optimized geometry for good performance and resistance to liquid handling
- High temperature resistant Molybdenum piston rings preventing wear
- Optimized bearing surface dimension
- Valve reeds of impact resistant spring steel
- Sensor for electronic Oil Pressure Switch OPS2 for durability
- Electronic motor protection module

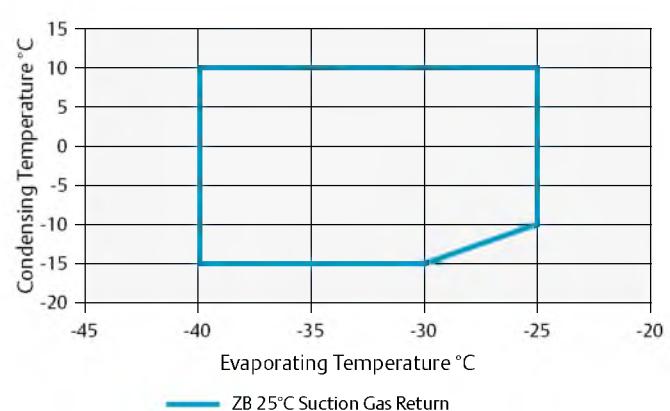

### Features and Benefits - Scroll Booster

- PTFE coated bearings for especially low friction and good protection at start up
- Copeland Scroll™ axial and radial compliance for superior reliability and efficiency
- Light weight and compactness, more than half the weight of equivalent semi-hermetic reciprocating compressors
- Availability of optional sound shell on all model providing an additional 10dBA sound attenuation for silent operation

### Operating Envelope R404A - S-Series Booster

### Operating Envelope R404A - Scroll Booster

### Maximum Allowable Pressure (PS)

- S-Series booster:  
Low Side PS 22.5 bar(g) / High Side PS 28 bar(g)
- Scroll booster:  
Low Side PS 22.6 bar(g) / High Side PS 32 bar(g)

# Semi-Hermetic Reciprocating Compressors

Emerson Climate Technologies offers different ranges of semi-hermetic reciprocating compressors with distinct levels of performance and technical characteristics depending on the application requirements.

## BRAND CHANGE

### Brand Change

To harmonize Emerson's semi-hermetic compressor ranges in terms of color and branding, Emerson is changing the product brand and the nomenclature of the semi-hermetic compressors for the K & L-Series and the Discus-range. In the future, we will start using the well-known 'Copeland brand products' label replacing "DWM Copeland" and change the compressor color from grey to black.

By this initiative, all compressor products from Emerson with both scroll and piston technology are using one and the same branding and color: Copeland™ brand products – painted in black. Our customers can better focus their marketing and communications efforts leading to improved brand and company recognition.

Over time, our product range will be streamlined to only one compressor model line. The reed valve compressors of the 2- to 8-cylinder S-series will gradually be replaced by the puck design valve compressors of our Stream and Discus series. This results in reduced inventory lines at our distribution partners. Emerson Climate Technologies will provide you with a full model list to support you in the transition phase.

S-Series 6 Cylinder

### The S-Series:

Its design is based on traditional "reed" valve plates similar to what is used in reciprocating compressors offered by other manufacturers. The performance of such compressors

meets basic market requirements but cannot compete with Discus compressors in terms of efficiency. The S-Series ranges from 1.5 to 70 hp and is composed of K, L, 2S, 3S, 4S and 8S presented in this catalogue.

### The Discus Range:

It is broadly recognized as the most efficient compressor whatever the running condition. This range is mainly used in refrigeration medium and low temperature applications where system efficiency is a priority for the end-user.

The key difference between Discus and other reciprocating compressors lies in its valve plate design. Traditional "reed" valves are replaced by 'puck' type valves that are integrated in the valve plate. This special design eliminates the dead volume at the

Discus 2 Cylinder

end of the compression and allows for the highest compressor efficiency. To date, no other reciprocating compressor is able to match Discus in terms of performance. Available from 4 to 60 hp, they are referred to as 2D, 3D, D4D, D6D and 8D in this catalogue.

### The Stream Series:

Emerson Climate Technologies has introduced Stream, a brand new line of semi-hermetic 4 and 6 cylinder compressors. The series provides best in class performance for today's HFC-based and uprising natural and low GWP refrigerants, significantly reducing cost of operation and environmental impact compared to competing products.

The range is made of 4 and 6 cylinder models, available for inverter applications, and 4 and 6 cylinder digital models for continuous capacity modulation. The compressors can be fitted with a dedicated sound shell for sound sensitive applications.

The new Emerson Climate Technologies line-up of 4 cylinder compressors for CO<sub>2</sub>-transcritical applications is the ideal solution for R744 medium temperature cascade and booster systems. It is characterised by a design pressure of 135 bar. Refrigerant flow and heat transfer have been optimized for best performance. In combination with the CO<sub>2</sub>-subcritical scroll for the low temperature refrigeration side, Emerson Climate Technologies offers the most energy efficient package available on the market today.

With advanced protection and diagnostics features for system reliability, reduced service costs and increased equipment uptime, the Stream series is built to last in today's modern changing world.

# Emerson CoreSense™ Diagnostics for Refrigeration

Emerson CoreSense Diagnostics is an innovative technology for Copeland Stream refrigeration compressors. It goes beyond compressor protection by assisting in system diagnosis and optimization. Providing service engineers with detailed information at the right time, system-related problems can be diagnosed faster or even before they occur. Supermarket operators benefit from increased system uptime, reduction in food loss and reduced maintenance costs.

## Technical Specification

- Power supply 120/240V AC, 24V AC
- Front end: 2 x LED, green/red, yellow
- Communication protocol (Modbus®RTU)
- Bus to system controller: RS 485, 3-wire, (+, GND, -)
- Discharge temperature sensor
- Current sensor and sensor module
- Flash memory
- Alarm reset button
- IP 54

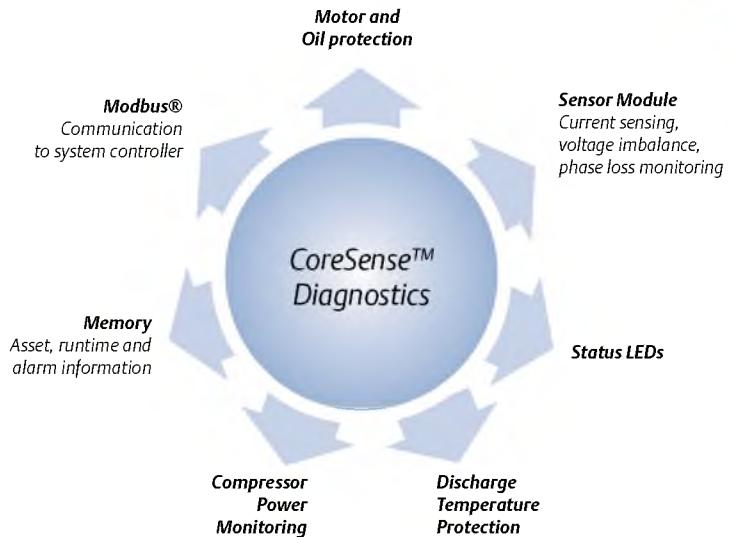

## Benefits

- Reduce applied system costs
- Manage on-site compressor data
- Facilitate predictive maintenance & advanced diagnostics
- Reduce maintenance costs
- Increase system uptime / reduce food loss
- Power consumption monitoring

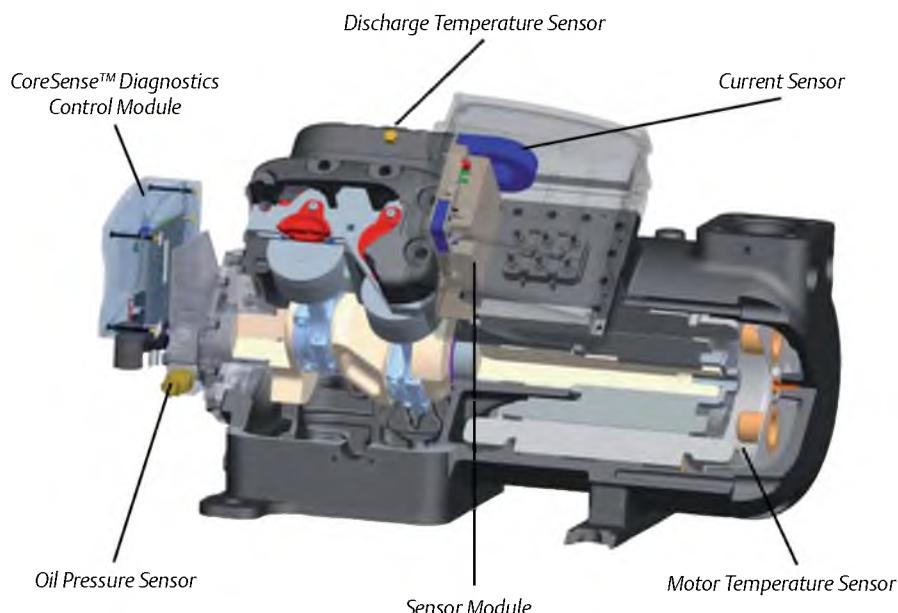

Emerson CoreSense Diagnostics for Refrigeration.  
Ensuring Best Performance over Full Lifetime.

## Functions

## Scope of Supply

## K and L Reciprocating Compressor Range

Small 2-cylinder semi-hermetic reciprocating compressors for medium and low temperature refrigeration applications and transport refrigeration.

Designed on the principle of standard reed valve type technology, these compressors feature an internal oil pump that guarantees optimum reliability in all operating conditions.

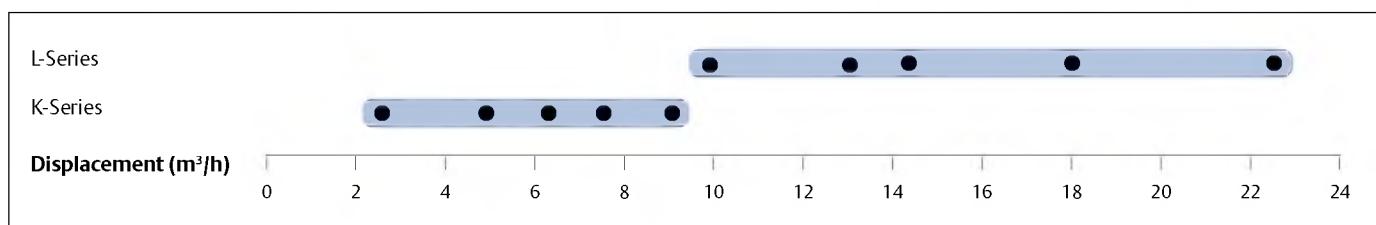

The K-series ranges from 0.5 to 2 hp and the L-series from 2 to 4 hp and provide cooling capacities from 1.5 to 9 kW in medium temperature (R404A, -10/45°C) and 0.5 to 3.5kW in low temperature (R404A, -35/40°C).

These compressors are qualified for R404A, R507, R134a and R22.

*K-Series compressor*

### K & L Compressor Line-up

Conditions EN12900, R404A: Evaporating -10°C, Condensing 40°C, Suction Gas Temperature 20°C, Subcooling 0K

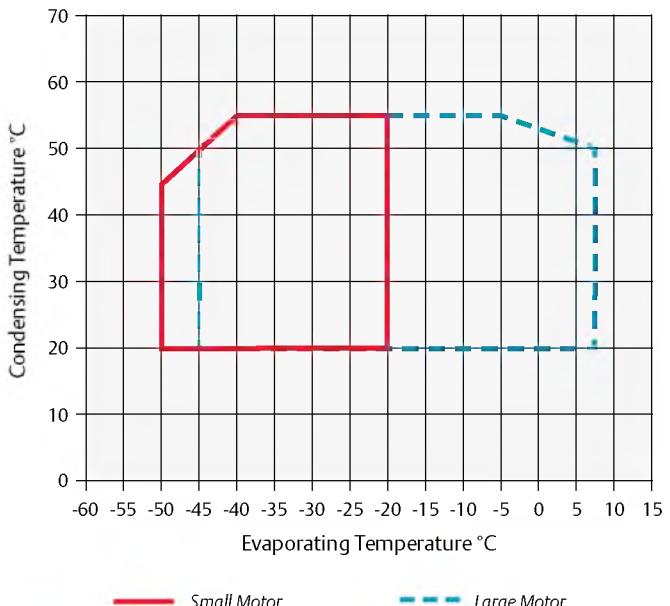

### Features and Benefits

- Large operating envelope from 5°C to -45°C evaporating and up to 55°C condensing
- Two motor sizes per displacement, optimized for different applications
- Compact and light compressors
- Ideal for condensing unit or transport applications
- Integrated oil pump for maximum reliability

### Maximum Allowable Pressure (PS)

- Low Side PS 22.5 bar (g)/ High Side PS 28 bar (g)

### Operating Envelope R404A

Suction Gas Return 20°C / Subcooling 0K

High Discharge Temp - Additional cooling required

# Discus™ Reciprocating Compressor Range

From 2 to 8 cylinder semi-hermetic reciprocating compressors for medium / low temperature refrigeration applications.

The key difference between Discus and traditional reciprocating technologies lies in the valve plate design. The Discus valve plate allows gas to flow into the cylinders with a minimum heat gain, while suction cavities are designed to smoothly route the gas to minimize losses. These effects lead to:

- Superior cooling capacity due to no re-expansion volume
- Up to 10% higher efficiency compared to conventional "cost-effective" reed type compressors
- Lower operating costs for the end-user

The Discus ranges from 5 to 60 hp and provide cooling capacities from 8 to 96 kW in medium temperature (R404A, -10/45°C) and 2 to 35 kW in low temperature (R404A, -35/40°C). These compressors are qualified for R404A, R507, R134a and R22. All Discus compressors are designed to deliver maximum performance and reliability:

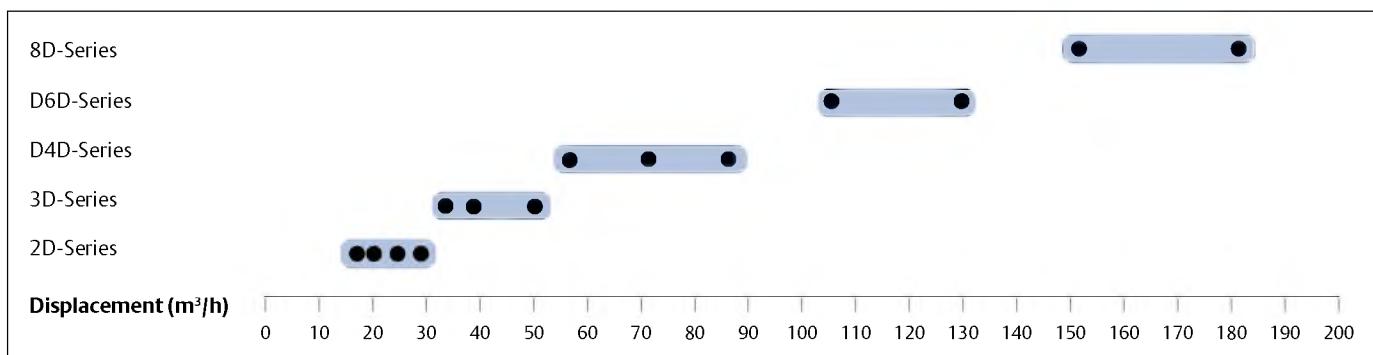

- Discus "puck" valve integrated into the valve plate for highest performance whatever the operating condition
- Positive displacement high flow oil pump guarantees high oil feeding pressure for good lubrication and bearings' cooling

Discus compressor

- PTFE coated bearings for especially low friction and good protection at start up
- Electronic motor protection module
- Availability of two motor sizes per displacement. The small motor covers all refrigeration applications while the large motor can be used in comfort or inverter applications

## Discus Compressor Line-up

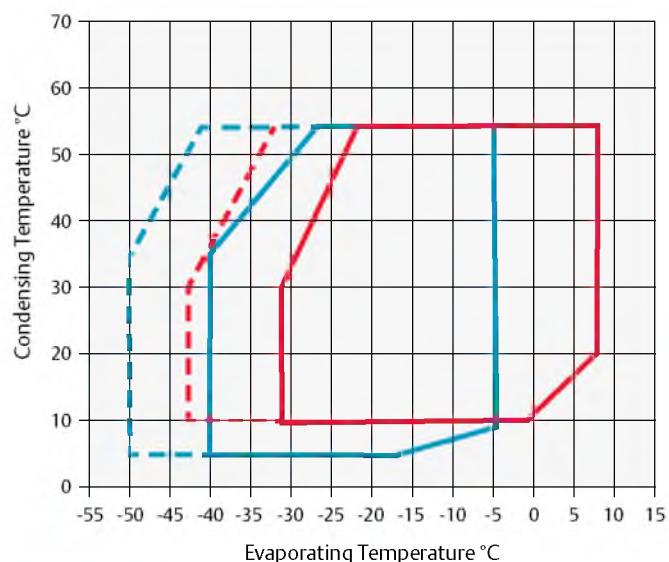

Conditions: EN12900, R404A: Evaporating -10°C, Condensing 40°C, Suction Gas Temperature 20°C, Subcooling 0K

## Features and Benefits

- Highest level of efficiency available on the market, whatever the refrigerant and operating condition
- Integrated oil pump and Electronic Oil Pressure Switch OPS2 for maximum reliability
- Two motor sizes per displacement, optimized for different applications
- Large operating envelope that allows medium and low temperature applications to be covered by one single model with condensing limit as low as 5°C
- Provide cooling capacity modulation either by cylinder head blocked suction or with use of frequency inverters from 25 to 60Hz
- Multi-refrigerant compressor range – one model to cover all standard refrigerants

## Operating Envelope R404A

## Maximum Allowable Pressure (PS)

- Low Side PS 22.5 bar (g)/ High Side PS 28 bar (g)

Refer to Emerson's Select 7.7 selection software for individual model operating envelopes and other refrigerants.

# Copeland™ Stream With CoreSense™ Diagnostics, Semi-Hermetic Reciprocating Compressors For HFC

Stream series 4 and 6 cylinder compressors provide best-in-class performance, thereby significantly reducing cost of operation and environmental impact compared to competing products. With advanced protection and diagnostics features for system reliability, reduced service costs and increased equipment uptime, Stream series is built to last in today's modern changing world.

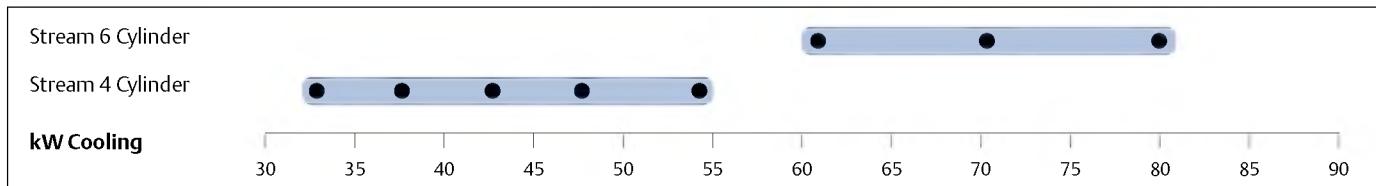

## Features and Benefits

- Range of 16 models from 62 to 153m<sup>3</sup>/h
- Best-in-class seasonal efficiencies, up to 15% higher than market standard
- Multi-refrigerant compressor as it is compatible with R404A, R134a, R407F, R407A/C and R22
- Stepless capacity modulation by means of inverter or Digital modulation
- Wide Operating Envelope covering Low and Medium Temperature Refrigeration without cooling fan
- Reduced sound level, dimensions and weight by up to 45 kg

## CoreSense Diagnostics Features

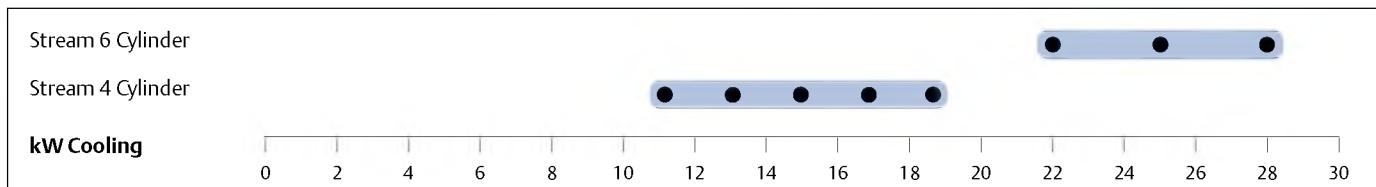

- Motor and oil protection
- Storage of compressor asset and advanced runtime information
- Runtime/alarm signalling using multi-colour LED flash-codes
- Communication to system controller via Modbus®
- Individual compressor power monitoring

## Stream Line-up with R404A, Medium Temperature

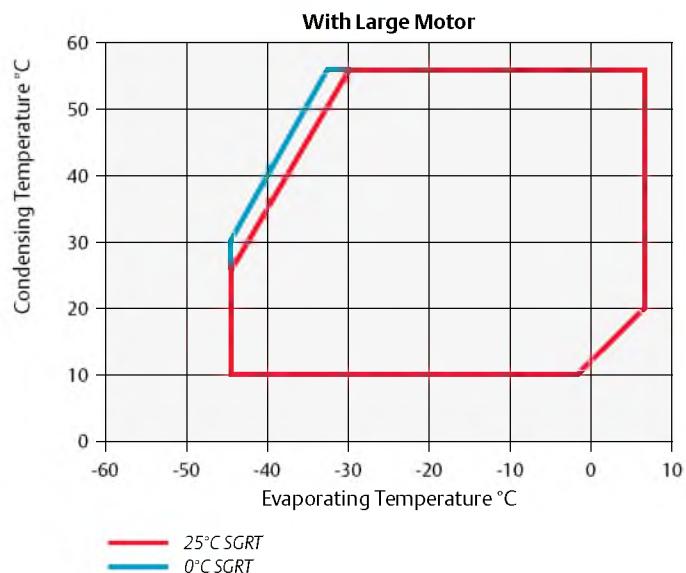

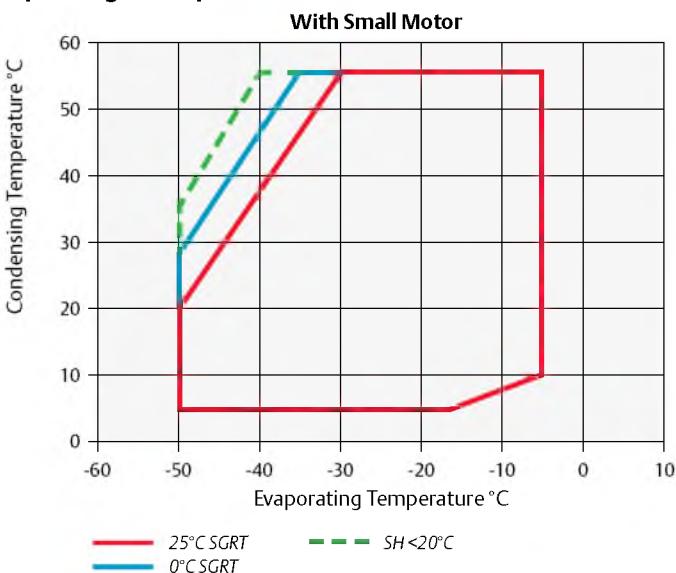

Conditions: EN12900 R404A: Evaporating -10°C, Condensing 45°C, Suction Gas Temperature 20°C, Subcooling 0K

## Stream Line-up with R404A, Low Temperature

Conditions: EN12900 R404: Evaporating -35°C, Condensing 40°C, Suction Gas Temperature 20°C, Subcooling 0K

## Operating Envelope R404A

## Maximum Allowable Pressure (PS)

- Low Side PS 22.5 bar(g) / High Side PS 28 bar(g)

## Copeland™ Stream Digital with CoreSense™ Diagnostics for Continuous Capacity Modulation

Stream Digital series 4 and 6 cylinder compressors provide an alternative means of continuous modulation to inverter. Digital modulation is the most simple and precise method of capacity control and helps to contain applied costs associated with modulation.

Digital technology is based on controlling a high cycle solenoid valve fitted on one of the cylinder heads based on cycle time. The valve actuates a piston that controls the flow of gas into the suction area of the Stream valve plate.

The compressor always run at constant speed which resolves the challenges related to oil return, mechanical and electrical stress on the system.

All compressors are equipped with CoreSense technology and offer the possibility to diagnose system related problems faster or even before they occur.

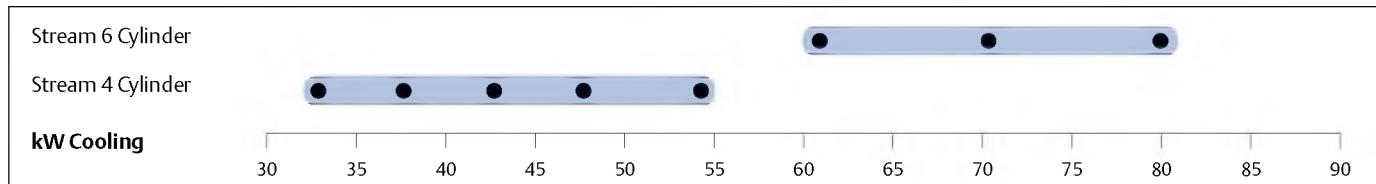

### Features and Benefits

- Range of 16 Models from 62 to 153 m<sup>3</sup>/h
- Multi-refrigerant compressor as it is compatible with R404A, R407F, R407A/C, R134a and R22
- Continuous modulation from 50–100% (4-cylinder) and 33–100% (6-cylinder) ensuring a perfect match of capacity and power to refrigeration load
- Economical and reliable alternative to frequency inverters
- Precise suction pressure control with associated energy savings and stable evaporating temperatures
- Quick and easy integration into refrigeration equipment, similar to any other standard compressor
- Possibility to easily retrofit existing installations with digital cylinder head kit
- No vibrations or mechanical stress on system piping and compressor parts
- Reduced compressor cycling for longer contactor and compressor life
- Emerson CoreSense Diagnostics technology providing advanced protection, diagnostics and preventive maintenance

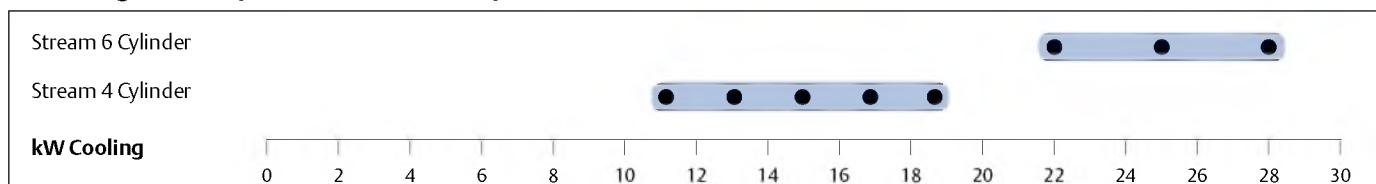

Copeland Stream Digital compressor

# Copeland™ Stream Compressors with CoreSense™ Diagnostics for R744-Transcritical Applications

Stream series of 4 cylinder CO<sub>2</sub> compressors is the ideal solution for R744 medium temperature cascade and booster systems. It is characterized by a design pressure of 135 bar. Refrigerant flow and heat transfer have been optimized for best performance. All compressors are equipped with CoreSense technology and offer the possibility to diagnose system-related problems faster or even before they occur.

## Features and Benefits

Stream provides for flexibility in pack design and operation:

- Compact dimensions
- Integrated high and low pressure relief valve
- Discharge Temperature Protection
- Service valve 360° rotation for ease of piping design
- 2 sight glasses for mounting of oil management control and visual inspection
- One additional sight glass for oil visual inspection at run time
- One oil port for oil equalization in parallel system
- Oil splash system ensuring lubrication at constant and variable speed

Designed for durability and performance in R744 applications:

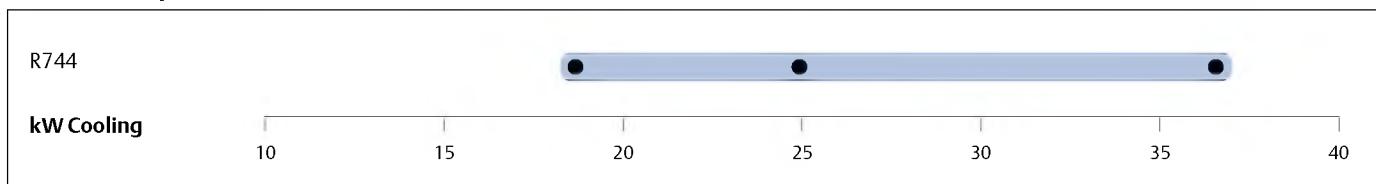

- Low sound, low vibration and large discharge chamber to eliminate pulsation
- High design pressures of 135 bar (high side) and 90 bar (low side)
- Burst pressures in excess of safety factor 3
- Cylinder head and discharge plenum design minimizing heat transfer to suction side
- Stepless capacity modulation via inverter from 30 to 70Hz
- CoreSense™ Diagnostics
- Individual compressor power consumption monitoring

*Copeland Stream Compressors for R744 Refrigeration*

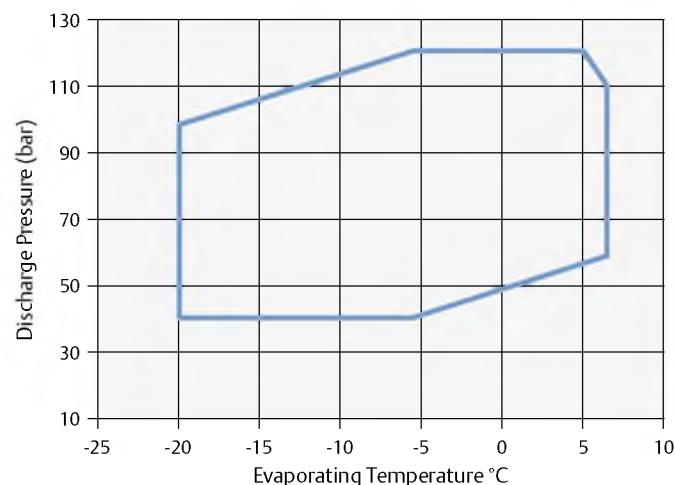

*Designed for Durability and Best-in-Class Performance in R744 Transcritical Applications*

## Stream Line-up for R744

## S-Series Reciprocating Compressor Range

From 2 to 8 cylinder semi-hermetic reciprocating compressors for medium/low temperature refrigeration and comfort applications.

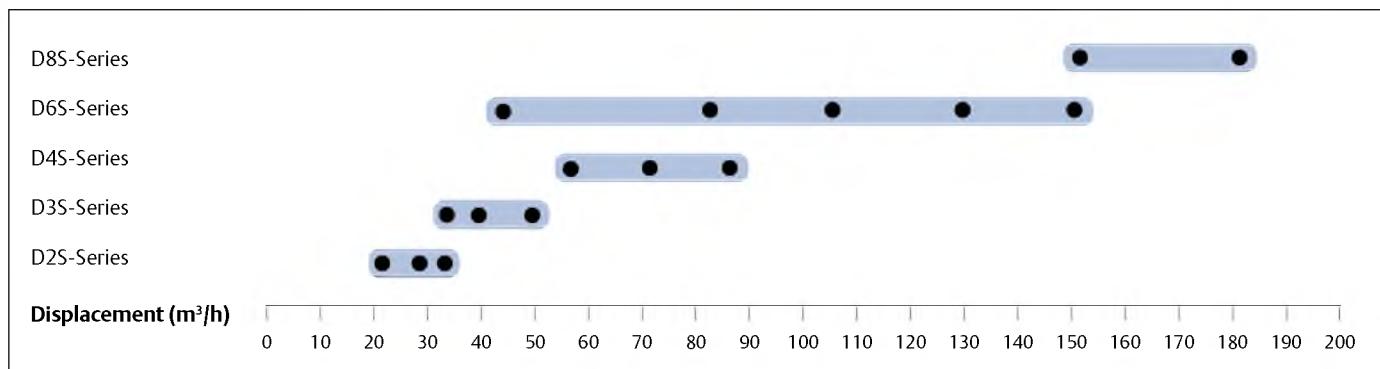

The S-series ranges from 5 to 70 hp and provide cooling capacities from 11 to 90 kW in medium temperature (R404A, -10/45°C) and 4 to 29 kW in low temperature (R404A, -35/40°C). These compressors are qualified for R404A, R507, R134a, R22 and R407C (some models).

The S-series comprises the 2S, 3S, 4S, 6S and 8S models. It is suction gas cooled and uses reed valve technology, found on all reciprocating compressors except Discus™ and Stream. It is suited for numerous single- or multi-compressor applications such as condensing units or compact compressor packs for medium to large supermarkets.

All compressors are designed for unquestionable reliability:

- Positive displacement high flow oil pump guarantees high oil feeding pressure for good lubrication and bearings' cooling
- PTFE coated bearings for especially low friction and good protection at start up
- Aluminium piston with optimized geometry for good performance and resistance to liquid handling
- High temperature resistant Molybdenum piston rings preventing from wear
- Optimized bearing surface dimensions
- Valve reeds of impact resistant spring steel
- Pre-set internal pressure relief valve between suction and discharge that opens if the maximum differential pressure is exceeded
- Electronic motor protection module

### S Series Compressor Line-up

Conditions: EN12900, R404A: Evaporating -10°C, Condensing 40°C, Suction Gas Temperature 20°C, Subcooling 0K

### Features and Benefits

- Integrated oil pump and Electronic Oil Pressure Switch OPS2 for durability
- Two motor sizes per displacement, optimized for different applications
- Ability of the refrigeration compressors with small motor size to operate as low as 10°C condensing
- Large operating envelope that allows medium and low temperature applications to be covered by one single model
- Provide cooling capacity modulation either by cylinder head blocked suction or with use of frequency inverters from 25 to 60Hz with the standard AWM motors
- Multi-refrigerant compressor range – one model to cover all standard refrigerants

### Maximum Allowable Pressure (PS)

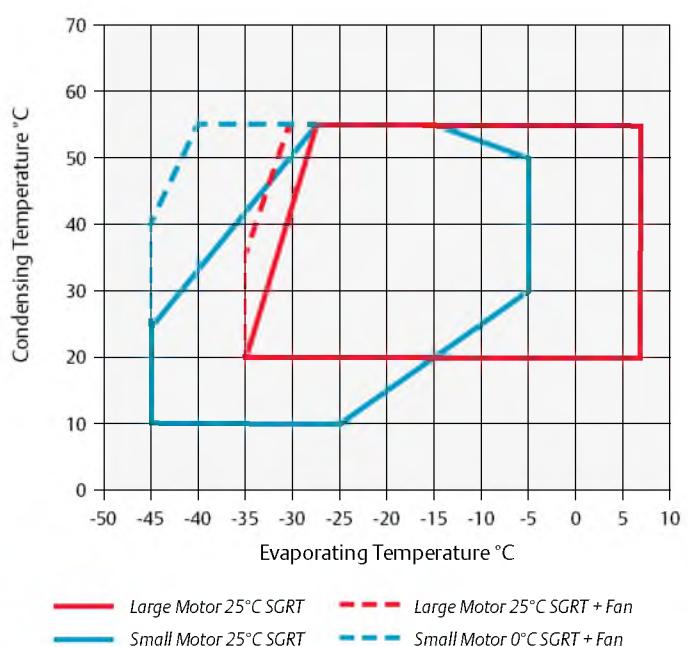

- Low Side PS 22.5 bar (g)/ High Side PS 28 bar (g)

S-Series Compressor

- Optimized bearing surface dimensions
- Valve reeds of impact resistant spring steel
- Pre-set internal pressure relief valve between suction and discharge that opens if the maximum differential pressure is exceeded
- Electronic motor protection module

### Operating Envelope R404A

## Technical Overview

R404A	Nominal hp	Displacement (m <sup>3</sup> /h)	Capacity (kW) 1)	COP 1)	Capacity (kW) 2)	COP 2)	Oil Quantity (l)	Length/Width/ Heighth (mm)	Net Weight (kg)	Motor Version / Code	Maximum Operating Current (A)	Locked Rotor Current (A)	Sound Pressure (@ 1 m) (dB) *

High Discharge Temp - Additional cooling required

## Condensing Units

Emerson Climate Technologies offers the broadest and most reliable condensing unit product line-up. Leveraging the latest compressor technology, each platform provides you the option to select the refrigerant, capacity and application temperature combinations that meet your requirements. A huge variety of Copeland™ indoor and outdoor condensing units offer the right solution for applications in food retail and food service, commercial and industrial refrigeration.

Copeland EazyCool Scroll™ Outdoor Condensing Units are designed and fully equipped for a quick and easy installation and ideal to integrate into urban environments. The latest scroll technology is combined with high quality Alco components and covered by a weatherproof housing in a unique design.

The Copeland EazyCool™ Outdoor Condensing Unit ZX Series offers the highest energy efficiency available in a standard unit to lower operators' utility bills. Ranging in size from 2 to 7.5 hp, the ZX units are perfectly suited for typical food service and retail applications. The key benefits of compactness, silence and efficiency in the standard models will be enhanced by the capability of continuous capacity modulation of the ZX Digital models. This makes ZX Digital condensing units the perfect fit for applications with wide load variations.

Copeland Scroll™ indoor condensing units are equipped with the latest refrigeration scroll compressors and constitute the widest range of their kind. The modular line concept offers base units which can be adapted to the target application by various options including weather housings and fan speed controls.

Copeland Scroll™ Digital Receiver Units HLR are an innovative offering for food service and retail businesses. Their compact design and the power of digital scroll continuous capacity modulation enable optimized environmental integration with highest system efficiency.

Semi-hermetic condensing units: robust, reliable and efficient air-cooled condensing unit platforms featuring semi-hermetic reciprocating compressor technology are for use in high, medium and low temperature refrigeration applications. Products range from 0.8 to 40 hp and are available for R404A, R407A/C, R134a and R22 refrigerants.

# Copeland EazyCool™ Outdoor Condensing Units with Scroll Compressors

Copeland™ air-cooled outdoor condensing units for medium temperature and low temperature applications.

Emerson Climate Technologies has developed this series of condensing units especially for outdoor use. The latest Scroll technology is combined with high quality components and covered by an absolutely weather resistant synthetic resin housing in a unique design.

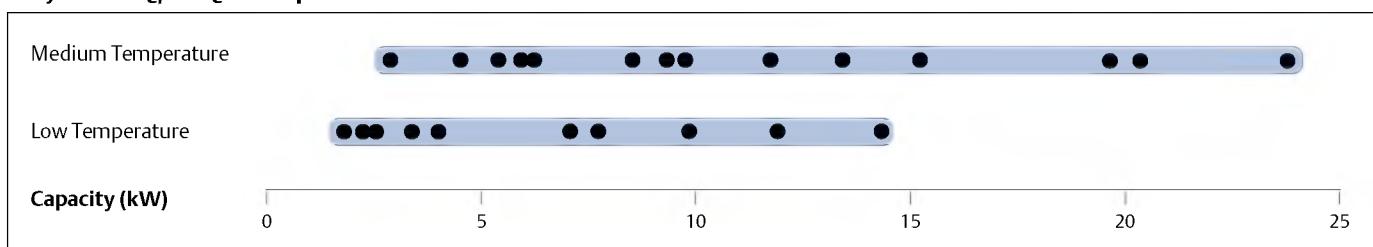

The EazyCool line-up offers state-of-the-art technology and models featuring stepless capacity control, vapor injection and fan speed control. This makes it the first choice for target applications in food retail and food service:

- Proximity and convenience stores
- Mini markets and supermarkets
- Bars, restaurants and kitchens
- Beer cellars and beverage coolers

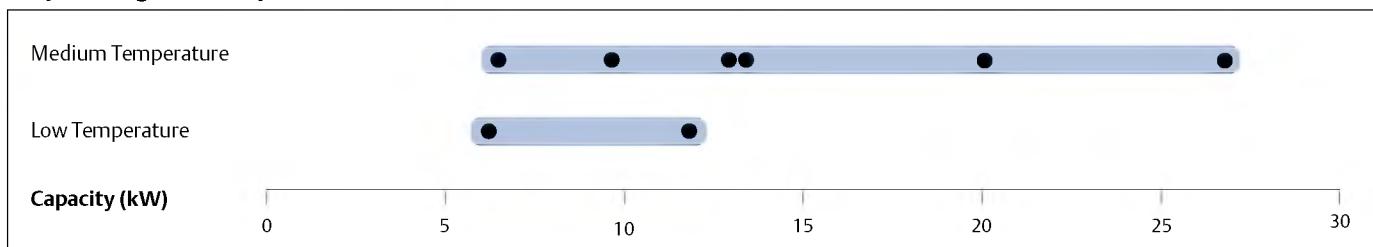

*Copeland EazyCool Outdoor Condensing Units  
with Scroll Compressors*

## EazyCool OLQ/OMQ Line-up

Conditions EN13215 R404A: Evaporating Temperature MT -10°C / LT - 35°C, Ambient Temperature 32°C, Suction Gas Return 20°C

## EazyCool Digital Line-up

Conditions EN13215 R404A: Evaporating Temperature MT -10°C / LT - 35°C, Ambient Temperature 32°C, Suction Gas Return 20°C

## Features and Benefits

- Standard equipment: Scroll compressor(s), crankcase heater(s), condenser with thermally protected fan(s), fan speed control, HP and LP switch, liquid receiver, filter drier & sight glass, weather resistant housing
- Suitable for multiple refrigerants: R134a, R407A, R407C and R22
- Wide range of quality accessories
- Excellent efficiency
- Filter drier, liquid sight glass and solenoid valve in liquid line

## Maximum Allowable Pressure (PS)

- Low Side PS 22.5 bar (g)
- High Side PS 28 bar (g)

# Copeland EazyCool™ Outdoor Condensing Units for Refrigeration Networks

Copeland™ outdoor condensing unit networks for medium temperature and low temperature applications.

Emerson Climate Technologies has developed this version of outdoor scroll condensing units with interconnectivity in order to create medium and large size refrigeration network systems.

The EazyCool condensing unit networks perfectly fit in applications where larger cooling capacities and capacity modulation are required.

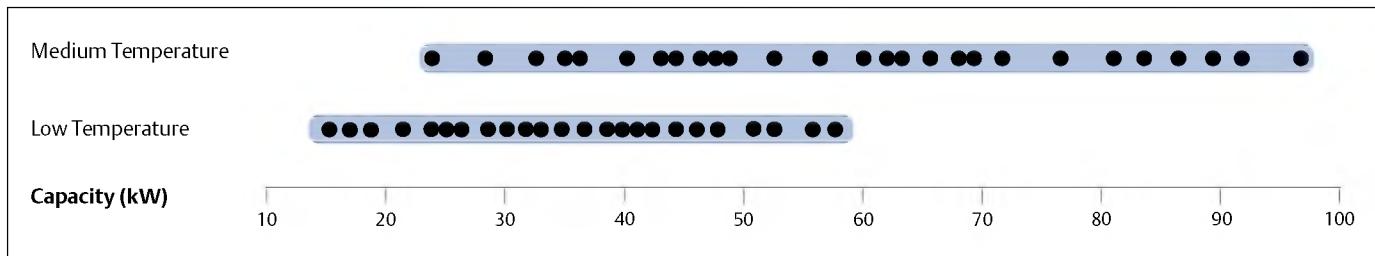

Typical applications are:

- Cold and freeze stores
- Discount and convenience stores
- Supermarkets and mini-markets
- Petrol station forecourts

*Copeland EazyCool Outdoor Condensing Units  
for Refrigeration Networks*

## Copeland EazyCool Network Line-up

Conditions EN13215 R404A: Evaporating Temperature MT -10°C/LT -35°C, Ambient Temperature 32°C, Suction Gas Return 20°C

## Features and Benefits

- Standard equipment: Copeland Scroll™ compressor(s), crankcase heater(s), condenser with thermally protected low speed fan(s), fan speed controller, oil separator, suction and liquid equalization lines, HP and LP switch, oil reservoir, EC2 Electronic controller, weather resistant housing
- Oil control system with oil separator, TRAX OIL on each compressor, oil distribution lines and additional liquid receiver unit for large networks
- LON Master/Slave communication
- Capacity modulation with up to 8 compressors or stepless with Digital Scroll™
- Perfect capacity adjustment by a wide range of combination opportunities

## Maximum Allowable Pressures (PS)

- Low Side PS 22.5 bar(g)
- High Side PS 28 bar(g)

# Copeland EazyCool™ ZX Outdoor Condensing Units with Scroll Compressors

Copeland™ compact outdoor condensing units are for medium temperature and low temperature applications.

With this new range of outdoor condensing units, Emerson Climate Technologies offers a solution for refrigeration applications with space and noise constraints which responds to the increasing demand for energy-efficient condensing units.

Copeland EazyCool ZX outdoor condensing units feature the most complete and unique equipment. Their diagnostics module detects and displays the system status and it can communicate and transmit an alarm signal to a remote receiver. Vapor injection and liquid injection technology significantly increase system efficiency and operation map. Electronic protection functions, oil separator and suction accumulator guarantee optimum system safety.

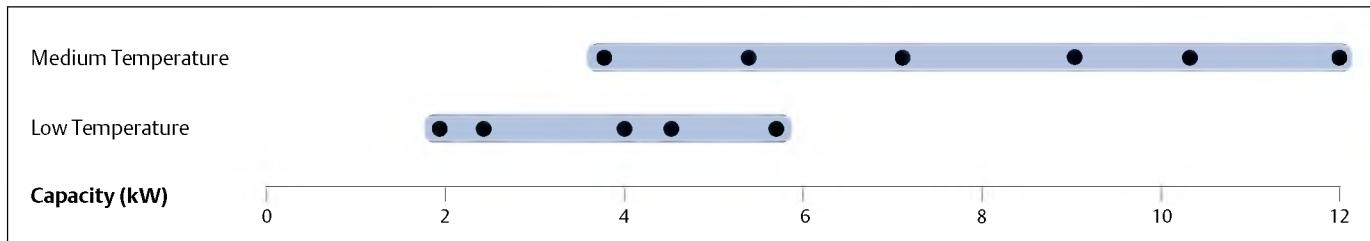

Lowest life cycle costs and comprehensive safety features make Copeland EazyCool ZX a cost efficient and reliable choice for:

- Convenience stores
- Cold rooms
- Fast food stores, bars and restaurants
- Beverage coolers

## Copeland EazyCool ZX Line-up

Conditions EN13215 R404A: Evaporating Temperature MT -10°C/LT -35°C, Ambient Temperature 32°C, Suction Gas Return 20°C

## Copeland EazyCool ZX Digital Line-up

Conditions EN13215 R404A: Evaporating Temperature MT -10°C/LT -35°C, Ambient Temperature 32°C, Suction Gas Return 20°C

## Features and Benefits

- Standard equipment: Copeland Scroll™ compressor, crankcase heater, diagnostics module, fan(s) with speed control, liquid receiver, adjustable LP switch, safety switches, filter drier and sight glass, oil separator and suction accumulator (LT models only)
- Copeland EazyCool ZX Digital models allow for 10% to 100% continuous capacity modulation
- Diagnostic capabilities protect the unit from over-current, phase loss and phase imbalance
- LED display shows real time system status
- Energy and operation cost saving due to excellent energy efficiency
- Noise attenuation due to low speed fan motors with sickle blades, fan speed control and sound jacket
- Vapor injection technology for LT models
- Space saving due to compact dimensions
- Easy and quick installation

Preliminary data

# Copeland Scroll™ Indoor Condensing Units for Refrigeration

Copeland™ air-cooled condensing units for medium temperature and low temperature applications.

Copeland Scroll condensing units are equipped with the latest refrigeration scroll compressors and build the widest range of its kind. The modular line concept offers base units which can be adapted to the target application by various options including weather housings and fan speed controls.

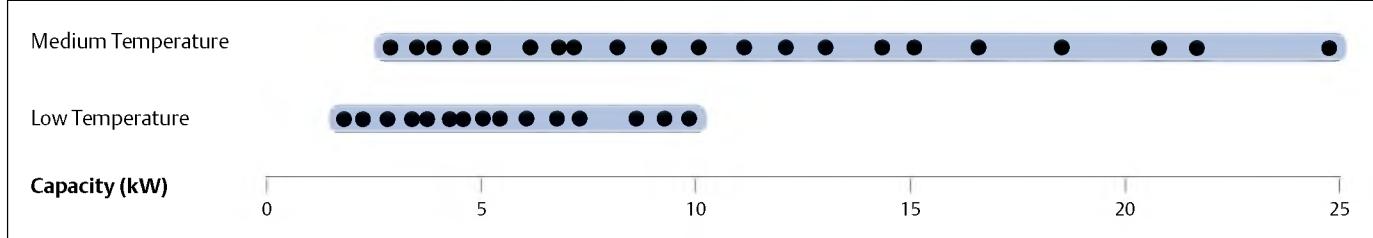

Copeland Scroll condensing units are available with normal or high capacity condensers to ensure optimum performance even under extreme conditions. They are equipped with dedicated medium or low temperature compressors which makes them suitable for all general refrigeration applications, such as:

- Mini markets and supermarkets
- Bars, restaurants and kitchens
- Beer cellars and beverage coolers
- Cold rooms
- Milk cooling tank

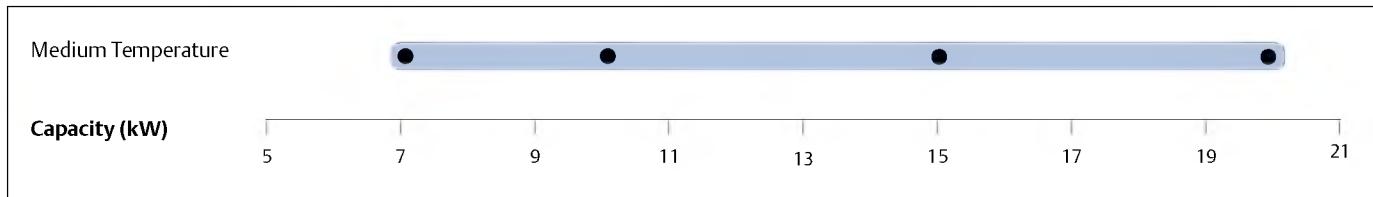

*Copeland Scroll  
Indoor Condensing Unit*

## Copeland Scroll Condensing Units Line-up

Conditions EN13215 R404A: Evaporating Temperature MT -10°C/LT -35°C, Ambient Temperature 32°C, Suction Gas Return 20°C

## Copeland Scroll Digital Condensing Units Line-up

Conditions EN13215 R404A: Evaporating Temperature -10°C, Ambient Temperature 32°C, Suction Gas Return 20°C

## Features and Benefits

- Standard equipment: base plate, scroll compressor, crankcase heater, condenser with 1ph fan(s), HP and LP switch, liquid receiver with rotalock-valve, suction- and discharge shut-off valves
- Suitable for multiple refrigerants: R404A, R407C, R143a, R407A and R407F
- Wide range of quality accessories
- Excellent efficiency and reliability

## Maximum Allowable Pressures (PS)

- Low Side PS 22.5 bar (g)
- High Side PS = 28 bar (g)

Preliminary data

## Copeland Scroll™ Digital Receiver Unit HLR

Copeland Scroll Digital Receiver Units are the perfect choice for remote condenser systems.

These Scroll Digital Receiver Units are an innovative offering by Emerson Climate Technologies for food service and retail businesses. Their compact design and the power of Digital Scroll™ continuous capacity modulation allow for optimized environmental integration at highest system efficiency.

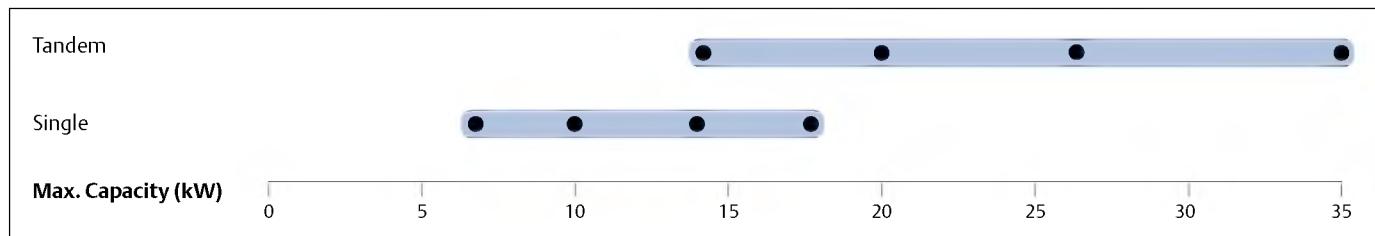

Eight models with single or tandem compressors cover the need of medium temperature refrigeration capacities in various applications. The continuous capacity modulation always provides the right performance, especially for systems with multiple evaporators and variable loads. The remote condenser concept allows for optimal building integration.

Digital Receiver Unit HLR

### Digital Receiver Unit HLR Line-up

Conditions EN12900 R404A: Evaporating Temperature -10°C, Condensing Temperature 45°C, Suction Gas Return 20°C

### Features and Benefits

- Standard equipment: Digital Scroll™ compressor, liquid receiver, liquid line with filter drier and sight glass, HP/LP switch, complete electrical box including controller with overload protection and communication interface
- Continuous capacity modulation 10-100 % (Single) or 5-100 % (Tandem)
- Precise suction pressure control
- Maximum system flexibility by free choice of third party condensers
- Excellent energy efficiency
- High reliability
- Easy and quick installation

### Maximum Allowable Pressures (PS)

- Low Side PS 22.5 bar (g)
- High Side PS = 28/32 bar (g)

## Semi-Hermetic Condensing Units DK/DL

Copeland™ air-cooled indoor condensing units for medium temperature and low temperature applications.

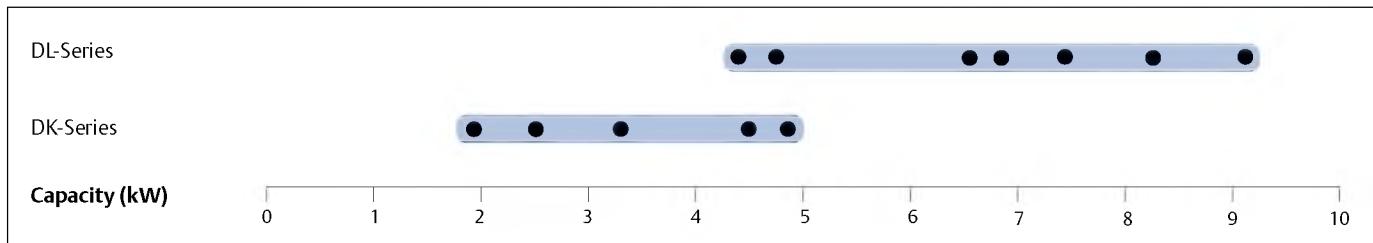

Long-term engineering and manufacturing experience has led to these condensing units with reed valve technology compressors. Their excellent quality and reliability is traditionally well known in the refrigeration industry.

This series of condensing units is equipped with single fan or twin fans which allows for very compact dimensions. The wide range of models offers solutions for most applications including operation in extreme conditions like high evaporation temperatures and high ambient temperatures.

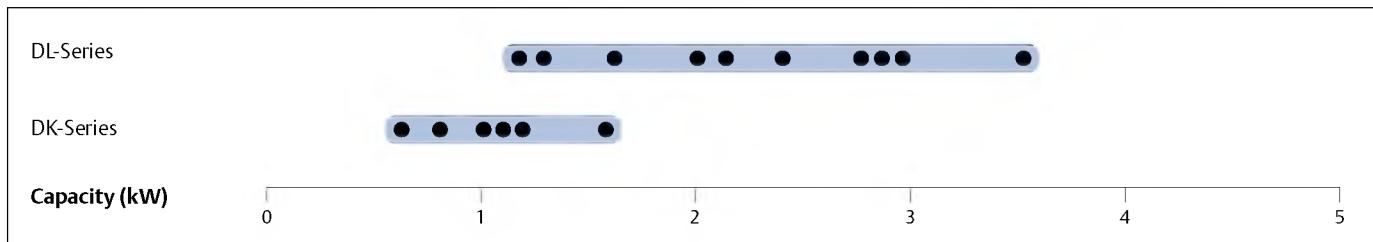

Semi-Hermetic Condensing Unit DK/DL

### Semi-Hermetic DK/DL Condensing Units Medium Temperature Line-up

Conditions EN13215 R404A: Evaporating Temperature -10°C, Suction Gas Return 20°C, Subcooling 0K

### Semi-Hermetic DK/DL Condensing Units Low Temperature Line-up

Conditions EN13215 R404A: Evaporating Temperature -45°C, Suction Gas Return 20°C, Subcooling 0K

### Features and Benefits

- Standard equipment: compressor, condenser with thermally protected fan(s), discharge line with flexible pipe loop or vibration absorber, liquid receiver with shut-off-valve, HP/LP switch with automatic reset
- Suitable for a broad range of refrigerants: R404A, R507, R134a, R407A/C, R22
- Wide range of quality accessories
- Proven reliability

### Maximum Allowable Pressures (PS)

- Low Side PS 22.5 bar (g)
- High Side PS = 28 bar (g)

## Condensing Units with Semi-Hermetic Discus™ Compressors

Copeland™ air-cooled indoor condensing units for medium temperature and low temperature applications.

In a further approach to improve compressor performance and reduce compression losses, Emerson Climate Technologies engineers developed the Discus valve technology.

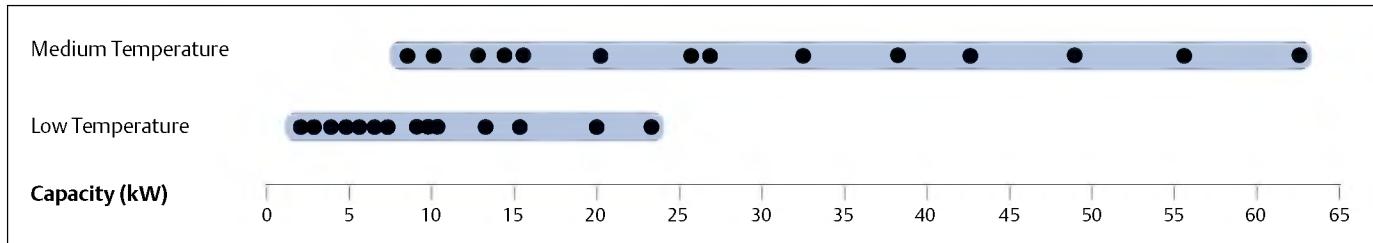

This series of condensing units is equipped with 2, 3, 4 or 6 cylinder semi-hermetic compressors with Discus valve technology. The models are specifically suitable for those applications where high efficiency and low energy consumption is required.

The wide range of compressor models combined with 2 or 4 fan high capacity condensers covers most application needs of low temperature and medium temperature applications.

Condensing Units with Semi-Hermetic Discus Compressors

### Discus Condensing Units Line-up

### Features and Benefits

- Standard equipment: Discus compressor, condenser with thermally protected fan(s), discharge line with flexible pipe loop or vibration absorber, liquid receiver with shut-off valve, HP/LP switch with automatic reset, oil pressure safety control OPS2
- Suitable for multiple refrigerants: R404A, R407A, R407F, R507, R134a and R22
- Wide range of quality accessories
- Excellent efficiency
- Proven reliability

### Maximum Allowable Pressures (PS)

- Low Side PS 22.5 bar (g)
- High Side PS = 28 bar (g)

## Alco Controls

Alco Controls is the leading provider of precision electronic and electromechanical controls for the refrigeration and air conditioning markets. We continue to pioneer the control of refrigerant flow with innovative designs, keeping system performance optimization central to our product development.

The wide range of Emerson controllers covers all major applications in commercial air conditioning and refrigeration, as well as heat pump systems. There are stand alone controllers and controllers with a communication interface, which can be used in LON networked systems too.

The controllers with TCP/IP Ethernet communication feature a full web server function and provide full data exchange with any user in the World Wide Web. This allows quick and inexpensive monitoring from any PC with a standard web browser.

Emerson offers drivers and superheat controllers designed for the EX4 to EX8 range of electrically driven control valves. The superheat controllers allow stable superheat control with the EX valves, while the digital superheat controllers can be synchronized with the PWM capacity control valve incorporated in the Digital Scroll™ compressor technology.

Display case and cold room controllers provide all functions needed to run commercial refrigeration, like superheat control with electrical control valve, thermostat, fan and defrost control, integrated timer and alarm functions.

Other controllers offer control functions on the “hot side” of the refrigeration circuit: condenser and condensing unit controllers, rack controllers for up to 8 single stage compressors or for multi-stage compressors and dual circuit controllers.

The compressor soft starter allows keeping the starting current below the limit imposed in residential heat pump applications.

Electronic fan speed controllers help to maintain a minimum condensing pressure by reducing fan speed at low ambient temperature.

Sensors and accessories are needed in conjunction with the above mentioned controllers.

Oil management systems are used to maintain the oil level in the compressor's crank case.

Emerson's controls portfolio is completed by offering a variety of mechanical controls such as:

- pressostats & thermostats,
- system protectors,
- valves,
- thermo™-Expansion Valves,
- oil separators,
- and Suction Accumulators.

Whatever control you choose, you can always expect high reliability and best performance.

# Electrical Control Valves

## Electrical Control Valve Technology

Thermostatic expansion valves and mechanical regulator valves have been used in the refrigeration and air conditioning industry to control superheat and refrigerant mass flow since its very beginning. As today's systems require improved energy efficiency, tighter temperature control, wider range of operating conditions and incorporate new features like remote monitoring and diagnostics, the application of electronically operated valves becomes mandatory. Only they offer the controls performance necessary to meet these needs. Electrical control valves are actuators only. For operation in a system they need sensors, valve drivers and controllers, see next chapter.

**EXM/EXL** biflow valves for OEM use are equipped with an unipolar stepper motor drive. They are mainly used for heat pumps, air conditioning and close control.

**EX2** is designed for pulse width modulation. It is applicable to all common HCFC and HFC refrigerants and for subcritical CO<sub>2</sub> applications and is used mainly for refrigeration applications such as display cases. The EX2 valve is a slide type solenoid valve with an orifice for expansion. It is either completely open or completely closed. One common valve body can be combined with 6 interchangeable orifices to cover 7 capacity ranges.

**EX4/EX5/EX6/EX7/EX8** consist of two main internal assemblies, the valve and the stepper motor. The stepper motor is located next to the electrical plug and connected directly to the slide and cage assembly of the valve. Similar to the technology used in compressors, the motor is exposed to refrigerant and lubricant and the materials used are identical to the ones in compressor

motors. The housing of the motor and valve assembly is made from stainless steel and fully hermetic, utilising exclusively brazing and welding technologies and eliminating all gaskets. This design offers several technical advantages such as proportional linear mass flow and a wide capacity range. A common feature of all EX2, EX4-8 electrical control valves is the positive shut-off function, which eliminates the need for additional solenoid valves.

**CX4/CX5/CX6/CX7** High Pressure Expansion Valves are stepper motor driven valves for precise control of R744 (CO<sub>2</sub>) refrigerant mass flow in air conditioning, refrigeration and heat pump applications. The Control Valves also can be used for liquid injection duty and hot gas bypass.

## Valve Selection

For **EX2**, the published table quotes capacities at 100% duty cycle. i.e., valve open continuously. However, it is recommended to operate the valve at partial load (50-80%) to allow for system load fluctuations. For **EX4/EX5/EX6/EX7/EX8 and EXM/EXL**, all published capacities are maximum and there are no reserve capacities. Each valve should be selected for the highest possible capacity of the system. A wide range regulation (10 ... 100%) with one slide orifice for each valve is achievable. To facilitate valve dimensioning for other than the standard conditions, Emerson Climate offers an Excel based Alco selection tool. This can be downloaded from [www.emersonclimate.eu](http://www.emersonclimate.eu).

## Selection Table for Electrical Control Valves and Applicable Controllers

# Electrical Control Valves Series EXM/EXL

for OEM use, stepper motor driven

## Features

- Unipolar stepper motor
- Bi-flow (same performance in both flow directions in term of capacity)
- High MOPD: 40 bar in normal flow direction
- Removable coils in two versions: 12VDC/24VDC
- Continuous modulation of mass flow, no stress (liquid hammering) in the refrigeration circuit
- Linear flow
- Resolution: 500 pulses (half steps) or 250 full steps
- Hermetic design
- Only Bulk packing in boxes of 10 identical pieces
- Reliability: 225 millions pulses at continuous 40 bar differential pressure
- The valve is not released for refrigeration applications such as cold rooms and refrigeration display cabinets.

*EXM/EXL with Coil*

## Selection Chart

Type	Part No.	Description	Nominal Capacity kW			Connection size/style
			R410A	R407C	R134a	
EXM-B0A	800 399M	Valve less coil	1.8	1.6	1.2	1/4" ODM
EXM-B0B	800 400M	Valve less coil	5.5	5.0	3.7

EXL-246	800 408M	Coil 24VDC, 6 wires	-	-	-	

The nominal capacity is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling
R407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K
R134a, R410a	+4°C	+38°C	1K

## Technical Data

Max. allowable pressure PS	45 bar
MOPD	40 bar in normal flow direction
Temperature range TS	TS: -30 to +70°C (liquid refrigerant) -30 to +60°C (ambient)
CE marking	Not required
Weight	Valve EXM: 65 g, EXL: 76 g Coil EXM: 124 g, EXL: 156 g
Package and delivery	Bulk pack with 10 pieces

Stepper motor type	Uni-polar, constant voltage
Full travel time	16.6 seconds at 30 pulse/sec. 5.5 seconds at 90 pulse/sec
Reference position	Mechanical stop at fully close position
Total number of pulses	500 half step (250 full step)
Insulation class	EXM: A EXL: E
Cable length	1m

## Electrical Control Valves Series EX2

Pulse width modulated with exchangeable orifices

Can be used with EC2 display case controllers (see page 167)

### Features

- Pulse width modulated
- Shut off function eliminates the necessity of a separate solenoid valve
- Dampened plunger reduces noise effects of water hammer
- One valve body can be combined with 6 orifices to make 7 capacity ranges up to 18.7 kW (R407C)
- Applicable to all common refrigerants (HCFC, HFC) and for subcritical CO<sub>2</sub> applications
- Long lifetime, high reliability
- PS: 40bar, TS: -40 to +65°C

EX2 with Orifice

### Selection Chart

Type	Part No.	Function	Capacity Q <sub>n</sub> at 100% open Valve (kW) *						
			R134a	R22	R404A	R507	R407C	R744	R407F
EX2-M00	801 091	10 mm inlet / 12 mm outlet ODF	13.3	17.2	12.1	12.1	18.7	35.0	19.2
EX2-I00	801 090	3/8" inlet / 1/2" outlet ODF							
EXO-004	801 089	Orifice 4	8.5	10.9	7.7	7.7	11.8	22.2	12.2
EXO-003	801 088	Orifice 3	5.6	7.2	5.1	5.1	7.8	14.6	8.0

EXO-00X	801 084	Orifice X	0.7	0.9	0.6	0.6	1.0	1.8	1.0
ASC 24V	801 062	Coil 24 VAC 50-60Hz (8W)							

\* Orifice should be selected at max. 80% of Q<sub>n</sub> to allow covering the load fluctuation

The nominal capacity (Q<sub>n</sub>) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling
R407C, R407F	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K
R22, R134a, R404A, R507	+4°C	+38°C	1K
R744	-40°C	-10°C	1K

For other operating conditions an Excel based selection tool can be downloaded from [www.emersonclimate.eu](http://www.emersonclimate.eu), or use correction factors with following formula:

$$Q_n = Q_o \times K_t \times K_{\Delta p}$$

Q<sub>n</sub>: Nominal valve capacity

Q<sub>o</sub>: Required cooling capacity

K<sub>t</sub>: Correction factor for evaporating and liquid temperature

K<sub>Δp</sub>: Correction factor for pressure drop at valve

## Electrical Control Valves Series EX4, EX5, EX6, EX7 & EX8

### Features

- Multifunction as expansion valve, hot gas bypass, suction gas throttling, head pressure, liquid level actuator etc.
- Fully hermetic design (no thread joints between valve body and motor compartment)
- Applicable to all common refrigerants (HCFC, HFC) and for subcritical CO<sub>2</sub> applications
- Stepper motor driven
- Short opening and closing time
- Very fast full stroke time
- High resolution and excellent repeatability
- Positive shut-off function to eliminate use of additional solenoid valve
- Bi-flow versions for heat pump applications
- High linear flow capacity
- Extremely wide capacity range (10 ... 100%)
- Continuous modulation of mass flow, no stress (liquid hammering) in the refrigeration circuit
- Direct coupling of motor and valve for high reliability (no gear mechanism)
- Ceramic slide and port for highly accurate flow and minimal wear
- Europe patent No. 0743476, USA patent No. 5735501, Japan patent No. 28225789
- Balanced force design
- Corrosion resistant stainless steel body and stainless steel connections
- PS: EX4-EX7 60 bar, EX8 45 bar
- Liquid Inlet Temperature TS:  
Uniflow: -50 to +100°C, Biflow: -40 to +80°C

**Selection Chart** (Capacities see following pages)

Type	Part No.	Flow Pattern	Capacity Range	Inlet Connection	Outlet Connection	Electrical Connection
EX4-I21	800 615	Uni-flow	10 ... 100%	3/8" ODF	5/8" ODF	M12 Plug
EX4-M21	800 616			10mm ODF	16mm ODF	
EX5-U21	800 618			5/8" (16mm) ODF	7/8" (22mm) ODF	
EX6-I21	800 620			7/8" ODF	1-1/8" ODF	
EX6-M21	800 621			22mm ODF	28 mm ODF	
EX7-I21	800 624			1-1/8" ODF	1-3/8" ODF	
EX7-M21	800 625			28mm ODF	35mm ODF	
EX8-M21	800 629			42mm ODF	42mm ODF	
EX8-U21	800 630			1-3/8" (35mm) ODF	1-3/8" (35mm) ODF	
EX8-I21	800 631			1-5/8" ODF	1-5/8" ODF	
EX4-U31	800 617	Bi-flow (Heat Pump)	-50 ... +80°C	5/8" (16mm) ODF	5/8" (16mm) ODF	
EX5-U31	800 619			7/8" (16mm) ODF	7/8" (22mm) ODF	
EX6-I31	800 622			1-1/8" ODF	1-1/8" ODF	
EX6-M31	800 623			28mm ODF	28mm ODF	
EX7-U31	800 626			1-3/8" (35mm) ODF	1-3/8" (35mm) ODF	

Type	Part No.	Temperature Range	Length	Connector type to valve	Connector type to driver or controller	Illustration
EXV-M15	804 663	-50 ... +80°C	1.5 m	M12, 4 pins	Loose wires	
EXV-M30	804 664		3.0 m			
EXV-M60	804 665		6.0 m			

## Capacity Data

### Application Expansion Valve and Liquid Injection Valve - Nominal Capacity kW

Valve Type	R407C	R22	R134a	R404A	R410A	R23 *	R124 *	R744	R407F
<b>EX4</b>	2 .. 17.4	2 .. 16.5	1 .. 12.8	1 .. 11.5	2 .. 19.3	2 .. 17.8	1 .. 9.2	3 .. 33.5	18
<b>EX5</b>	5 .. 53	5 .. 50	4 .. 39	4 .. 35	6 .. 58	5 .. 54	3 .. 28	10 .. 102	56
<b>EX6</b>	15 .. 126	15 .. 120	10 .. 93	10 .. 84	15 .. 140	13 .. 130	7 .. 67	24 .. 244	134
<b>EX7</b>	35 .. 347	35 .. 330	25 .. 255	25 .. 230	40 .. 385	-	-	70 .. 670	369
<b>EX8</b>	100 .. 925	90 .. 880	70 .. 680	60 .. 613	100 .. 1027	-	-	180 .. 1789	984

\* Biflow versions are not released for R124 and R23

Capacity for biflow versions identical in both flow directions.

The nominal capacity ( $Q_n$ ) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling
R407C, R407F	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K
R22, R134a, R404A, R410A	+4°C	+38°C	1K
R124	+20°C	+80°C	1K
R23	-60°C	-25°C	1K
R744	-40°C	-10°C	1K

## Guideline for Selection of Electrical Control Valves as Expansion Valves

### Alco Selection Tool

For easy and quick selection of Electrical Control Valves an Excel based selection tool can be downloaded from the Internet at [www.emersonclimate.eu](http://www.emersonclimate.eu), or use the quick selection tables on the following pages.

The following guideline should be taken into consideration in order to obtain full advantages of the control valves:

- **Published capacities are maximum and there are no reserve capacities**
- Larger size of valve leads to shorter pull down period and shorter travel time i.e., faster response. For example, EX7 has maximum 3.2 seconds travel time. The valve has approximately 1.6 seconds travel time at 50% capacity operation.

### Example:

System with R407C having two different operating conditions:

A) 110 kW capacity at +4°C/+50°C with two stages

compressor at 50% / 100% capacity

B) 137 kW capacity at +4°C/+30°C with two stages

compressor at 50% / 100% capacity

EX6 with 126 kW covers condition A, however is not sufficient to cover condition B. It is recommended to select larger valve i.e. EX7 with 337 kW at condition A and 293 kW at condition B.

### Condition A:

$$\text{Full load ratio} = 110 / 337 = 33\%$$

$$\text{Partial load ratio} = (110/2) / 337 = 16\%$$

### Condition B:

$$\text{Full load ratio} = 137 / 293 = 47\%$$

$$\text{Partial load ratio} = (137/2) / 293 = 23\%$$

The capacity ratios of system to valve are in all conditions higher than 10%. It is recommended to use EX7 rather than EX6.

For controllers, see page 152, 153 and 157.

For Applications As Expansion Valve The Following Correction Factors ( $k_{\Delta P}$ ) Related To The Pressure Drop At Valve Apply

	Correction factors for EXVs													
$\Delta P$ (bar)	1	1.5	2	2.5	3	3.5	4	4.5	5	5.5	6	6.5	7	7.5
$k_{\Delta P}$	3.51	2.87	2.48	2.22	2.03	1.88	1.76	1.66	1.57	1.5	1.43	1.38	1.33	1.28
$\Delta P$ (bar)	8	9	10	11	12	13	14	15	16	17	18	19	20	21
$k_{\Delta P}$	1.24	1.17	1.11	1.06	1.01	0.97	0.94	0.91	0.88	0.85	0.83	0.81	0.79	0.77

## Application Hot Gas Bypass - Nominal Capacities (kW)

Valve Type	Kv, m <sup>3</sup> /h	R22 / R407C	R134a	R404A / R507
<b>EX4</b>	0.21	4.9	3.4	4.6
<b>EX5</b>	0.68	16	11	15
<b>EX6</b>	1.57	37	26	35
<b>EX7</b>	5.58	131	92	126
<b>EX8</b>	16.95	399	278	382

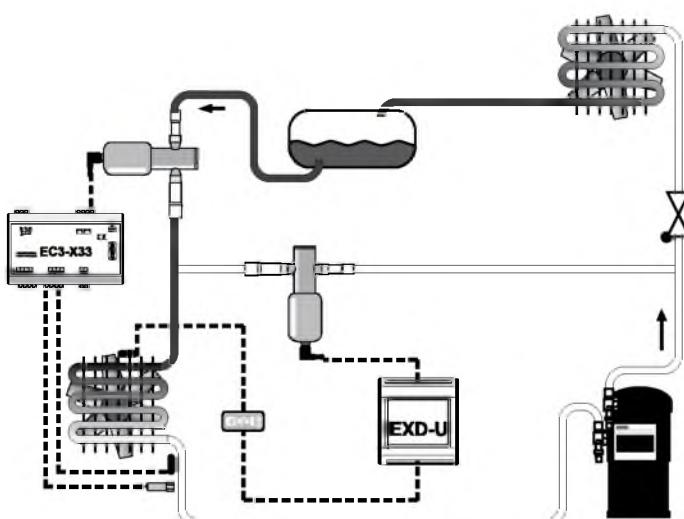

The nominal capacity (Qn) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling
R407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K
R22, R134a, R404A, R507	+4°C	+38°C	1K

For other operating conditions use Excel based Selection Tool (download from [www.emersonclimate.eu](http://www.emersonclimate.eu)) or use the following quick selection tables.

Biflow versions are not released for hot gas bypass applications. EX4 .. EX8 must be installed with motor downward in hot gas line applications. This ensures the valve life expectancy. Install a check valve on main hot gas line just after branch to Control Valve.

Condensing Temperature °C	Extended Capacity kW			Valve type
	R22 / R407C	R134a	R404A / R507	
60 bubble point for all refrigerants (64 dew point for R407C)	7	4.9	5.8	EX4
	23	16	19	EX5
	54	38	45	EX6
	191	135	161	EX7
	581	411	488	EX8
50 bubble point for all refrigerants (54 dew point for R407C)	6.1	4.3	5.5	EX4
	20	14	18	EX5
	46	32	41	EX6
	163	115	147	EX7
	495	348	447	EX8
40 bubble point for all refrigerants (45 dew point for R407C)	4.9	3.7	4.9	EX4
	16	12	16	EX5
	38	27	36	EX6
	136	95	130	EX7
	414	289	394	EX8
30 bubble point for all refrigerants (35 dew point for R407C)	4.3	2.8	4	EX4
	14	9	13	EX5
	32	22	31	EX6
	112	78	111	EX7
	340	236	336	EX8

## Application Suction Pressure Regulation (Evaporating or Crankcase Pressure) - Nominal Capacities (kW)

Valve Type	Kv, m <sup>3</sup> /h	R407C	R22	R134a	R404A
<b>EX6</b>	1.57	3.9	4.1	3.1	3.5
<b>EX7</b>	5.58	14	15	11	13
<b>EX8</b>	16.95	42	45	34	38

The nominal capacity (Qn) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling	Pressure Drop
R407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K	0.15 bar
R22, R134a, R404A	+4°C	+38°C	1K	0.15 bar

For other operating conditions use Excel based Selection Tool (download from [www.emersonclimate.eu](http://www.emersonclimate.eu)) or use the following quick selection tables.

### Example:

EX6 provides 3.5 kW at 0.15 bar pressure drop with R404A or  $3.5 * 1.41 = 4.9$  kW at 0.3 bar pressure drop.

Multiply above nominal capacities by following factors to obtain capacities at different pressure drops:

ΔP, bar	0.10	0.15	0.20	0.30
Correction factor	0.82	1.00	1.15	1.41

Condensing Temperature °C	R134a					Valve Type

### Application Condensing Pressure Regulation and Liquid Duty - Nominal Capacities (kW)

Valve Type	Kv, m <sup>3</sup> /h	R407C	R22	R134a	R404A
EX5	0.68	18	20	18	13
EX6	1.57	43	46	42	30
EX7	5.58	153	162	151	106
EX8	16.95	463	491	458	323

The nominal capacity ( $Q_n$ ) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling	Pressure Drop
R407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K	0.35 bar
R22, R134a, R404A	+4°C	+38°C	1K	0.35 bar

Multiply above nominal capacities by following factors to obtain capacities at different pressure drops:

$\Delta P$ , bar	0.15	0.20	0.35
Correction factor	0.65	0.76	1.00

Example:

EX6 provides 30kW at 0.35bar pressure drop with R404A or  $30 * 0.76 = 22.8$  kW at 0.2 bar pressure drop.

Condensing Temperature °C	<b>R134a</b>		Extended Capacity Evaporating Temperature (°C)			Valve type

## Application Condensing Pressure Regulation and Liquid Duty

Condensing	R404A / 507	Evaporating Temperature (°C)
------------	-------------	------------------------------

### Application Hot Gas Flow such as Heat Reclaim Application - Nominal Capacities (kW)

Valve Type	Kv, m <sup>3</sup> /h	R22 / R407C	R134a	R404A / R507	R410A
<b>EX6</b>	1.57	11	9	10	13
<b>EX7</b>	5.58	39	33	36	47
<b>EX8</b>	16.95	119	101	108	144

The nominal capacity (Qn) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling	Pressure Drop	ISENTROPIC Efficiency
R407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K	0.35 bar	80%
R22, R134a, R404A, R507	+4°C	+38°C	1K	0.35 bar	80%

For other conditions see following tables.

Valves must be installed with motor downward in hot gas line applications. This ensures the valve life expectancy. Bi-flow versions are not released for hot gas flow applications.

Condensing Temperature °C	Pressure Drop bar	Extended Capacity KW Evaporating Temperature (°C)													Valve type

# Electrical Control Valves Series EX4, EX5, EX6, EX7, EX8

## Technical Data

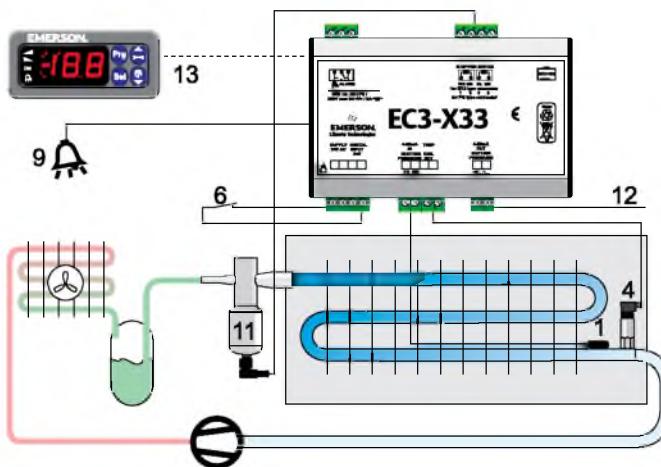

Compatibility *	HCFCs, HFCs, CO <sub>2</sub> , Mineral and POE lubricants
MOPD (maximum operating pressure differential)	EX4/EX5/EX6/EX7: 35 bar EX8: 30 bar
Max. allowable pressure, PS	EX4/EX5/EX6/EX7: 60 bar EX8: 45 bar
Medium temperature range: Uniflow version	Liquid inlet temperature TS: -50 ... +100°C
Biflow version	TS: -40 ... +80°C
Ambient temperature	-40 ... +55°C
Storage temperature	-40 ... +70°C
CE marking EX4/EX5 EX6/EX7/EX8	not required required, Cat I, Module A
Salt spray test	non-corrosion stainless steel body
Humidity	5 ... 95% R.H.

Connections	ODF stainless steel fittings
Protection accordance to IEC 529, DIN 40050	IP 67 with Alco supplied cable connector assembly
Vibration for non-connected and fastened valve	4 g (0 .. 1000 Hz, 1 Oktave /min.)
Shock	20g at 11 ms, 80g at 1 ms
Net weight	0.5 kg (EX4), 0.52 kg (EX5), 0.6 kg (EX6), 1.1 kg (EX7), 1.5 kg (EX8)
Full travel time	EX4/EX5/EX6: 1.5 sec EX7: 3.2 sec., EX8: 5.2 sec
Seat leakage	Positive shut-off better than solenoid valve
External leakage	≤ 3 g / Year
Package and delivery	Single pack, without electrical connector

\* Valves are not released for use with inflammable refrigerants.

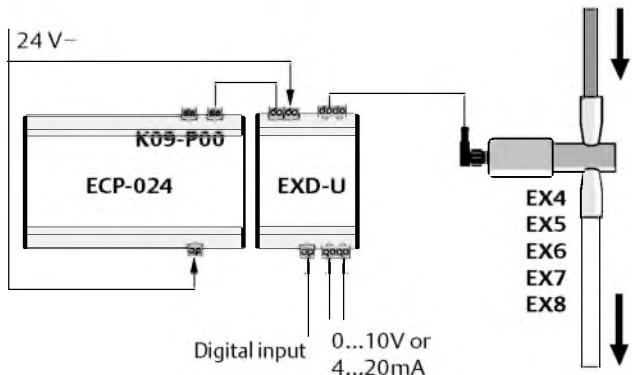

## Block Diagrams

**Superheat Control with EC3-X33** (see page 160)  
optional display unit ECD-002

# High Pressure Expansion Valves Series CX4, CX5, CX6, CX7

Emerson Climate Technologies CX series are stepper motor driven valves for precise control of R744 ( $\text{CO}_2$ ) refrigerant mass flow in air conditioning, refrigeration, heat pump applications. The Control Valves can be used as high pressure expansion valve, liquid injection duty, hot gas bypass.

## Features and Benefits

- Maximum allowable pressure, PS: 120 bar
- Test pressure, PT: 172 bar
- Burst pressure: >360 bar
- Fully hermetic design (no thread joints between valve body and motor compartment)
- Applicable to transcritical  $\text{CO}_2$  applications
- Very short full stroke time
- High resolution and excellent repeatability
- Positive shut-off of valve to eliminate the use of an additional solenoid valve
- Linear flow capacity
- Extremely wide capacity range (10 ... 100%)
- Continuous modulation of mass flow, no stress (liquid hammering) in the refrigeration circuit
- Direct coupling of motor and valve for high reliability (no gear mechanism)
- Ceramic slide and port for accurate flow and minimal wear
- Balanced force design
- Corrosion resistant stainless steel body and connections
- 40 micron internal strainer

For single phase compressor motors with up to 32A	CSS			181
<b>Pressure Transmitter</b>				
Output signal 4 ... 20mA	PT5			182
<b>Universal Controllers</b>				
With 2 digital inputs, 3 temperature inputs, 4 relay outputs		EC2-112	EC2-111	165

# Electronic Superheat Controllers and Stepper Motor Drivers

Emerson Climate Technologies designed superheat controllers and valve drivers for stepper motor driven control valves for all commercial refrigeration and air conditioning applications.

**EC3-X33** is a universal superheat controller without network communication for air conditioning, refrigeration and industrial applications such as chillers, industrial process cooling, rooftops, heat pumps, package unit, close control, cold room, food process and air driers. The ECD-002 Display/keypad Unit is necessary for setup but not for operation of the controllers. ECD-002 can be connected or disconnected to EC3-X33 at any time.

In the event of a cooling request and compressor start-up, EC3-X33 needs to be informed. This can be achieved by a digital input. EC3-X33 will start to control the refrigerant mass flow stand-alone by precise positioning of the Control Valve under different operating conditions such as compressor start-up, start of a further compressor, high head pressure, low head pressure, high load, low load and partial load operation. EC3-X33 is capable for diagnostics and alarm. The alarm can be received via relay output as well as optical LED/alarm code on ECD-002.

The **EC3-X32** has a similar function as EC3-X33 but with a TCP/IP Ethernet communication interface enabling the controller to be directly connected to a network or a PC via the standard Ethernet port. The EC3-X32 controller has embedded WebPages to enable the user to visualise the parameter list with a standard WebBrowser

like Internet Explorer®. When connected to a suitable connection, the controller is able to automatically send alarms by email to a PC or mobile phone.

For use with **Copeland Scroll™ Digital** technology two other models are available. **EC3-D73** is a stand-alone version for use with the ECD-002 Display / Keypad unit whilst the **EC3-D72** has a TCP/IP Ethernet interface. A 0-10V demand signal is required from a third party controller to control a tandem system with one fixed and one digital compressor. A patented algorithm synchronises the operation of the PWM digital compressor valve and the EX series electrical control valve.

**EXD-U Universal Drivers** are stepper motor drivers and enable the operation of ALCO® stepper motor driven valves EX4 ... EX8 as electronic expansion valve, capacity control by means of hot gas bypass or evaporating pressure regulator, crankcase pressure regulator, condenser pressure regulator, liquid level and liquid injection.

The universal driver module can be connected to any controller which can provide a 4-20mA or 0-10V analogue signal. The output is the opening/closing of EX4 ... EX8 and consequently the control of the refrigerant liquid or vapour mass flow in accordance with the analogue input.

## Display Case and Coldroom Controllers

The compact **EC2** series is available with either TCP/IP or LON communication protocols and also covers applications where the display cases are connected to a multiple compressor application. In this case, the dedicated compressor relay on the controller is no longer required and is available as a spare relay to perhaps switch the display case lighting.

The controllers therefore can be split into two groups; controller is required to switch the compressor directly; integral application and those connected to a multiple compressor (rack) system.

The **EC2-21x**, **EC2-31x** and **EC2-35x** have the dedicated compressor relay.

The **EC2-29x**, **EC2-39x** and **EC2-37x** are for use with the rack system.

The **EC2-2XX** series of controllers are specifically designed for display cases for use **with TXV**. The controller performs the function of thermostat, defrost and fan management and is capable of operating a standalone condensing unit or being incorporated into a distributed system controlled by a rack.

The **EC2-3XX** series incorporate the functionality of the **EC2-200** model but additionally have a superheat algorithm to control the EX2 control valve:

**EC2-31x / EC2-39x** (Temp / Temp): the superheat is controlled using two temperature sensors.

**EC2-35x / EC2-37x** (Pressure / Temp): the superheat is controlled using a pressure transmitter (PT5 series) in conjunction with a temperature sensor.

Whilst the products were developed for display cases, they may also be applied to control a simple coldroom.

In principle, the **EC3 series** utilize the same software technology of the EC2 series but provide additional inputs and outputs to satisfy the requirements of even the most demanding systems. Like the EC2, the EC3 series may be connected together to form larger systems combining the control of multiple compressors and fans.

The optional **ECD-001 Display/keypad Unit** is available to display the system temperatures, indicate system status and to modify parameters.

The **EC3-3XX** series are specifically for use with stepper valve series (EX4, EX5, EX6, EX7, EX8). In case of power loss, the Electrical Control Valve needs to be closed to avoid flooding of the compressor, therefore each valve requires a battery backup. For this reason, the battery, together with its automatic charging circuit, has been incorporated into the controller housing, significantly saving installation time as well as space in the electrical enclosure.

# Condensing Units, Rack and Condenser Controllers

## Condensing Unit Controllers

The **EC2-500** series of controllers are suitable for controlling the compressors and fans of a condensing unit. Digital inputs are available for individual compressor feedback loops from the safety chain, which typically consists of low and high pressure switches together with motor protection and oil management controls. A common feedback is also available for the fans.

Following models are available:

**EC2-512:** to control up to 2 compressors (on/off control) and 2 fans (on/off control).

**EC2-552:** to control up to 2 single stage compressors or tandem compressor condensing units with a **Copeland Scroll™ Digital** compressor. It features a 0...10V output to connect to an Alco Controls **FSP fan speed power module** for variable fan speed control. Alternatively this output may be used to control fan motor speed with an inverter or to connect to ECM type fan motors directly.

## Rack and Condenser Controllers

The **EC3 series** utilize in principle the same software technology of the EC2 series but provide additional inputs and outputs to satisfy the requirements of even the most demanding systems. Like the EC2, the EC3 series may be connected together to form larger systems combining the control of multiple compressors and fans. Many controllers include 0...10V outputs that may be used in conjunction with frequency inverters and/or the **FSP** series of **fan speed power modules**.

Commonly referred to as “hot application controllers”, the **EC3-652**, **EC3-672**, **EC3-752**, **EC3-812**, **EC3-932** series controllers are designed for the control of compressors and condensers. Racks with one or two suction groups and up to 8 single stage compressors including a **Copeland Scroll™ Digital** or 6 multistage compressors can be managed. **EC3-652** and **EC3-932** series have been designed to control a **Copeland Scroll™ Digital** and incorporate a triac to switch the PWM solenoid.

The control of condenser arrays with up to 6 fan stages as well as a combined control of Rack and Condenser is also possible. Refer to the table on page 156 for a complete product listing.

The optional **ECD-000 Display/keypad Unit** is available to display the system temperatures, indicate system status and to modify parameters.

## Condenser Controllers

The **EC2-7xx** series provide an economical solution for condenser control.

Two models are available:

**EC2-71x:** to control up to 4 fans, on/off. A feedback loop is available for each fan.

**EC2-74x:** provides a 0...10V output to feed **FSP** series **fan speed power modules**. Several FSP modules may be connected in parallel to speed control all fans simultaneously.

The **EC3 series** provides additional inputs and outputs to satisfy the requirements of even the most demanding systems:

**EC3-752:** for condensers with up to 6 stages, one with continuous control output 0 ... 10V, heat recovery control.

The optional **ECD-000 Display/keypad Unit** is available to display the system temperatures, indicate system status and to modify parameters.

**The Universal Series of Controllers** are useful additions to the series. They are typically used to enable the monitoring of temperatures from integral display cases that do not have communication facilities as well as potentially providing additional input and output functionality to control systems. Examples of such applications could be for switching display case lighting or for the monitoring of individual pressure switches on multiple compressor Racks.

**PT5 series pressure transmitters** are used to measure the suction and discharge pressures to modulate the compressor and fan capacities.

# Network Communication and System Management

The Alco EC Series of drivers and controllers utilise the very latest in communication technology which is setting new standards in the refrigeration industry. Energy saving algorithms are incorporated into many of the controllers including: adaptive superheat and thermostat modulation, defrost on demand & suction and discharge setpoint shift.

All **EC2** or **EC3** controllers are available in two communication protocols **TCP/IP Ethernet** and **LON**.

## TCP/IP Ethernet:

The controllers are Ethernet based enabling them to be connected directly to any computer via the Ethernet port (RJ45 connector). The controllers act as web server enabling the engineer to pick-up standard configuration pages directly from the controllers without the need of any additional hardware or software. Each controller can be connected to the PC using a crossover cable however, the most convenient way to connect a controller to the PC is to use a router that will automatically assign a TCP/IP address. Either way, the engineer can access the monitoring and parameter configuration pages by entering the TCP/IP number into the address line of an Internet browser such as Mozilla or Microsoft Internet Explorer. User name and password protection is provided to protect the controller from unauthorized access.

The **TCP/IP based Controllers** offer a practical solution, particularly for smaller installations that require communication for monitoring purposes without the need for customized visualization. For many installations, an additional monitoring server is not required.

## Other Functions:

- Monitoring of system temperatures and pressures as well as relay status information
  - Read/write of EC2 & EC3 control parameters
  - Real time graphical visualization
  - Log function of up to one months data directly on the controller
  - Log function of data to a PC \*
  - Storage and retrieval of system parameter
  - Local alarms via email \*
  - Remote alarms via email \*\*
- \* Controller must be connected to the PC  
\*\* Router must be connected to an external telephone line and / or the Internet via an Internet Service Provider (ISP)

## LON Protocol:

A range of free-topology LON FT10-based controllers is available and complements the TCP/IP controller series. LON is an open system protocol created by Echelon and therefore benefits from not being tied to a restrictive third party protocol.

LON-based controllers can be connected to each other to form simple networks for applications requiring master / slave or synchronized defrosting. However, they can also be connected to a Monitoring Server to fulfill the most sophisticated system requirements.

The Monitoring Server acts as an interface from the LON network containing EC2 and EC3 to the outside world. Remote access can be made using standard telephone line; analog or digital ISDN. Alternatively, data can be transmitted via the Internet or a dedicated company Intranet using TCP/IP. Either way, visualization may be made using an industry standard Internet web browser.

By transmitting the system status information as temperatures or pressures used to control the refrigeration circuit in each subsystem, together with other vital system data, the system administrator can potentially identify system failures before they become an expensive stock loss situation. Should a system failure occur, the controllers automatically transfer to an emergency-operating mode whilst sending a system error message to the monitoring server.

The benefit of a **centralized data acquisition system** is that it can dramatically reduce the costs associated with food, which cannot be sold as a result of failing to meet the criteria set by the food hygiene regulations.

The **monitoring server** is typically connected to an analog or digital phone line and can communicate a system alarm to a remote location via fax, email or SMS. In a similar way to the TCP/IP controllers, the engineer can visualize the system without the need of any additional hardware or software. The system can be visualized by entering the TCP/IP address of the monitoring server into the address line of the Internet web browser. In fact, the advancement of telecommunication systems are such that a maintenance engineer equipped with a laptop computer and mobile telephone can interact with the system from any location.

## Superheat Controllers Series EC3-X32 / EC3-X33

For stable superheat control with stepper motor driven electrical control valves Series EX4 - EX8

## Digital Superheat Controllers Series EC3-D72 / EC3-D73

For stable superheat control with EX4...EX6 electrical control valves and automatic synchronisation of the PWM capacity control valve incorporated into the Copeland Scroll™ Digital compressor technology

### Features

- Limitation of evaporating pressure (MOP)
- Feed-through of 4 ... 20mA signal of evaporating pressure transmitter to operate third party controllers with a common pressure transmitter
- Intelligent alarm management, superheat alarm
- Monitoring of sensors and sensor wiring, detection of sensor and wiring failures
- Integral rechargeable battery to close Electrical Control Valve in case of power loss
- Electrical connection via plug-in type screw terminals
- Aluminum housing for DIN rail mounting

EC3-X33 with ECD-002

- Freeze protection
- Low and high superheat alarm
- Low pressure switch function/alarm

### Additional features EC3-X32 and EC3-D72 with TCP/IP

- WebServer functionality allows monitoring and configuration of controllers through a standard Web browser (e.g. Internet Explorer®)
- Internal data logging and alarm messaging by email
- Multiple language support ([www.emersonclimate.eu](http://www.emersonclimate.eu))

### ECD-002 Display Unit

- Front panel mounted interface for parameter and status read-out and controller setup via keypad
- Indicator LEDs for valve opening/closing, external ON and alarm

### Accessoires

Description	Type	Part No.	Note
Display	ECD-002	807 657	
Connection cable EC3 to ECD	ECC-N10 ECC-N30 ECC-N50	807 860 807 861 807 862	1m cable length 3m cable length 5m cable length
Pressure Transmitter	PT5-07M PT5-18M PT5-30M	802 350 802 351 802 352	for R134a, R22, R404A, R407C, R507C, R124 for R410A only for R744
Cable Assembly for PT5	PT4-M60	804 805	other cable lengths see page 182
Temperature Sensor NTC	ECN-N30 ECN-N60 ECN-N99	804 496 804 497 804 499	3m cable length 6m cable length 12m cable length
Transformer 25VA 230V/24V AC	ECT-323 ECT-623	804 424 804 421	for EX4 to EX7 for EX8, DIN rail mounting

### Typical Ordering Package

System with 100 kW cooling capacity and refrigerant R22 requires the following parts:

EX6	Electronic Expansion Valve	ECN-N60	NTC Temperature Sensor
EXV-M60	Electrical Cable and Plug assembly	PT5-07M	Pressure Transmitter
EC3-X33	Superheat Controller Stand-alone	PT4-M60	Cable assembly PT5 6.0m
K03-X33	Terminal Kit for EC3-X33	ECD-002	Display (optional)
ECT-323	Transformer 25VA	ECG-N30	Connection cable EC3 to ECD (opt.)

PT5

PT4-Mxx

ECT-323

## EXD-HP1/2 Stand-alone Superheat/Economizer Controller

EXD-HP1/2 are stand-alone universal superheat and or economizer controllers for heat pumps, heating units, air conditioning and precision cooling such as telecom and shelter applications.

### Features EXD-HP1/2

- Self adapting superheat/economizer control in conjunction with EMERSON stepper motor driven electronic expansion Valves EXM/EXL
- Discharge hot gas temperature control by liquid/vapor injection to compressor
- EXD-HP1: Controller with one EXV output
- EXD-HP2: Controller with two independent EXV outputs
- Controllers as slave with Modbus (RTU) communication capability. All data (read/write) accessible by any third party controller having modbus communication (RTU)
- Upload/download Key (accessory) for transmission of parameter settings among controllers with the same setting
- Low pressure switch and freeze protection function
- Manual positioning of valve(s)
- Limitation of evaporating pressure (MOP)
- Low/high superheat alarm
- Monitoring of sensors and sensor wiring / detection of sensor and wiring failures

EXD-HP2

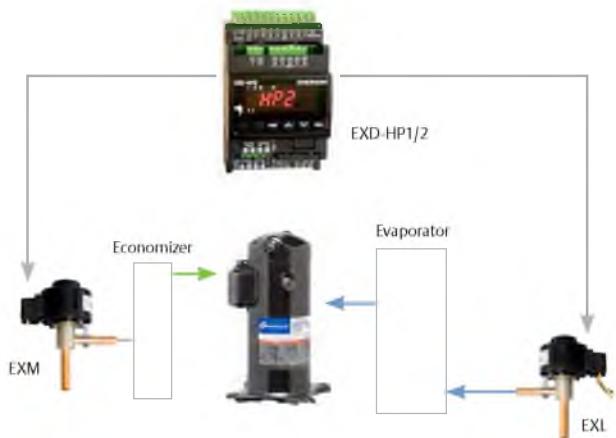

- VDE approval (pending)
- Integrated display (3-digits LEDs) and keyboard
- Electrical connection via plug-in type screw terminals (included with controller)
- DIN rail mounting housing
- **OEM product: Box/order quantities: 20 pieces (Multipack)**

### Selection Chart

Description	Type	PCN	
		M = Multipack (20 pieces)	Singlepack
Controller with one EXV output	EXD-HP1	807 836M	-
Controller with two EXV outputs	EXD-HP2	807 837M	-
Temperature sensor with 3 meter cable	ECP-P30	-	804 495
Electronic expansion valves see page 129	Valve: EXM-B0B Valve: EXM-B0D Valve: EXM-B0E Coil: EXM-125 Valve: EXL-B1F Valve: EXL-B1G Coil: EXL-125	800 400M 800 401M 800 402M 800 403M 800 405M 800 406M 800 407M	- - - - - - -
Pressure sensors (Suction pressure) -0.8...7 bar (R22, R134a, R407C) 0.....18 bar (R410A, R32)  Recommended for intermediate pressure (economizer control) See page 182	PT5-07M / PT5-07T PT5-18M / PT5-18T PT6-18M  PT5-30M / PT5-30T	802 350M / 802 370M 802 351M / 802 371M 802 361M  802 352M / 802 372M	802 350 / 802 370 802 351 / 802 371 802 361  802 352 / 802 372

Remark: For further details of EXM/EXL and PT5/PT6: Please see separate datasheet.

## Simplified Illustration: Heating Scroll With Economizer

### Alarm Functions

EXD-HP1/2 provides several alarms to facilitate diagnosis as well as shut down of compressor/system if the alarm relay is wired into the serial safety loop.

### Alarm Relay Function

Alarm relay contains a SPDT contact. If the relay is wired to the system controller, it is possible to stop the compressor/system. The alarm relay is activated/energized during normal operation and deactivated/deenergized during alarm conditions as well as supply power interruption.

## List of Alarms

Condition	Delay Time	Alarm Relay	Valve Position	Reset Type	Display Alarm LED
Hardware errors (sensors)	-	Triggered	Fully close	Auto	ON
Hardware errors (Stepper motor)	-	Triggered	-	Auto	ON
Low superheat	Fix: 1 min.	Triggered	Fully close	Auto/Manual	ON/Blinking
Discharge hot gas above limit	Fix: 1 min.	Triggered	Operating	Auto	ON
High superheat	Adjustable	Triggered	Operating	Auto	ON
Low pressure	Adjustable	Triggered	Operating	Auto/Manual	ON/Blinking
Freezing	Adjustable	Triggered	Fully closed	Auto/Manual	ON/Blinking

## Technical Data

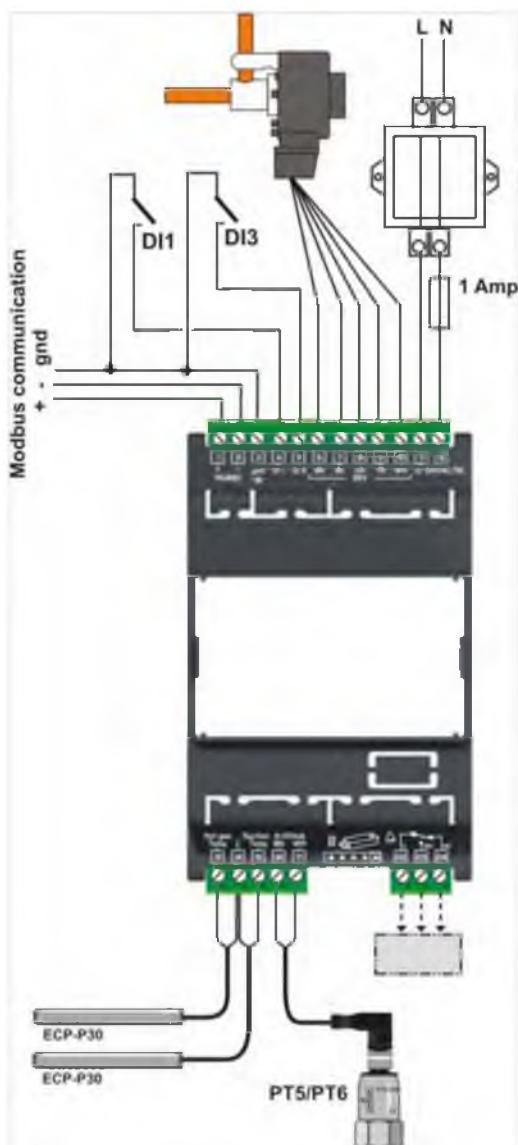

Supply voltage	24VAC/DC ±10%
Power consumption	EXD-HP1: Max. 15VA EXD-HP2: Max. 20VA
Digital inputs	EXD-HP1: Two, each potential free EXD-HP2: Three each potential free
Relay output	SPDT contacts, AgSnO Inductive (AC15) 24V AC: 1Amp Resistive: 24 V AC/DC: 4Amps
Plug-in connector size	Removable screw version wire size 0.14 ... 1.5mm <sup>2</sup>
Applied directive	LVD, EMC, RoHS, VDE
Compliance with	DIN EN 60335-1, DIN EN 55014-1 DIN EN 55014-2

Protection class	IP 20
Housing	Self extinguishing ABS
Mounting	DIN rail mounted
Temperatures storage operating	-20 ... +65°C -10 ... +60°C
Relative humidity	0 ... 85% RH non condensing
Weight	175 g
Marking	CE, VDE (pending) and Gost

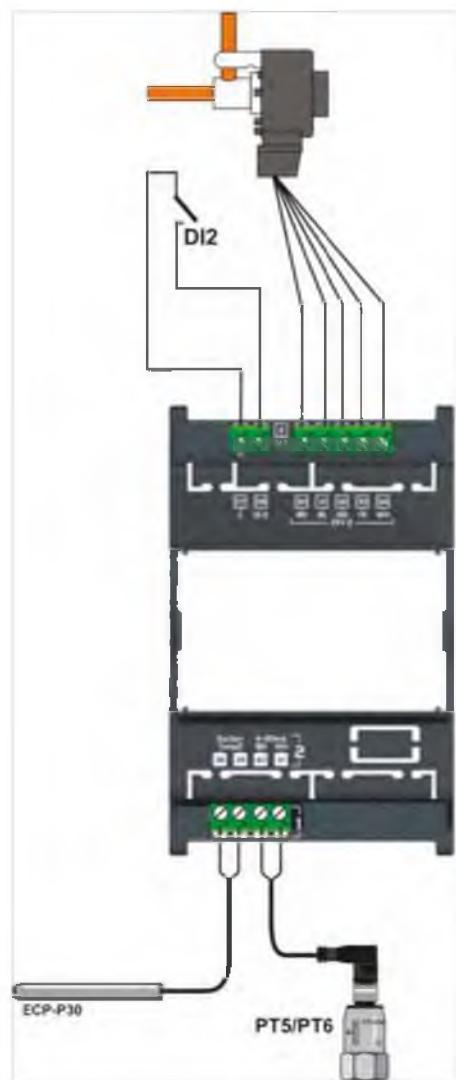

## Input Sensors, Output Valves

Description	Specification
Temperature input	ECP-P30 (3 meter cable length) Range: -30°C to +150°C
Pressure sensor input	PT5/PT6 Signal: 4 ... 20mA
Electronic expansion valves (stepper motor) output	EXM and EXL series with 12V coil

**Wiring Diagram  
EXD-HP1 and EXD-HP2 (Base board)**

**Wiring Diagram  
EXD-HP2 (Upper board)**

#### Remarks

- Base board for superheat control or Economizer control
- Alarm relay, dry contact. Relay coil is deenergized at alarm condition or power off and energized during normal operation
- Hot gas discharge sensor input is mandatory only for economizer control function
- Transformer shall be class 2

#### Remarks

- Upper board only for superheat control
- Upper board does not need to be wired if circuit 2 of EXD-HP2 is disabled

## Universal Driver Modules Series EXD-U00

For the operation of ALCO® stepper motor valves EX4 / EX5 / EX6 / EX7 / EX8 as:

- Solenoid Valve
- Electrical Expansion Valve
- Hot Gas Bypass or Evaporating Pressure Regulator as capacity control
- Crankcase Pressure Regulator
- Heat Reclaim Regulator
- Liquid Level Control

### Features

- Plug and play, no parameter setting
- Valve opening proportional to 4-20mA or 0-10V analogue input signal
- Digital input can be used to force valve closing
- Dip-switches for selection of Electrical Control Valves, analogue input and start mode
- Aluminium housing for DIN rail mounting
- Easy wiring
- Fully tested and ready for operation
- CE-marking for electromagnetic compatibility

### Options

- Uninterruptible Power Supply ECP-024 to automatically close valve after power down

EXD-U00

### Selection Chart

Description	Type	Part No. single unit	Part No. Kit*
Universal Driver Module	EXD-U00	804 557	808 038
Electrical Terminal Kit	K09-U00	804 559	

\* Controller Kit contains terminal kit

### Accessories

Description		Type	Part No.	Note
Uninterruptible Power Supply	ECP-024	804 558		for up to 2 driver modules
Electrical Terminal Kit	K09-P00	804 560		for ECP-024
Transformer	25VA	ECT-323	804 424	
230V/24V AC	60VA	ECT-623	804 421	DIN-rail mounting

### Capacity Data

See electrical control valve EX4 ... EX8 data.

For function as:

- Expansion valve - superheat control see page 133
- Capacity control by means of hot gas bypass see page 141
- Evaporating pressure regulator or crankcase pressure Regulator see page 142
- Condensing pressure regulation and liquid duty see page 145
- Application hot gas flow such as heat reclaim application see page 147

ECP-024

ECT-323

See datasheet A3.5.048 for detailed application drawings and technical data. For other than the specified operating conditions an Excel based Selection Tool can be downloaded from [www.emersonclimate.eu](http://www.emersonclimate.eu)

# Display Case and Universal Controllers Series EC2

With Web Server functionality and TCP/IP Protocol or with LON Protocol (FTT-10)

## Features of EC2-3 models:

- Superheat control for Pulse Width Modulated Valves (e.g. EX2-Series) see Selection Table
- Self-adapting controller, no user setup necessary
- Limitation of evaporating temperature (MOP)

EC2 Controller

## Features of all models:

- Air temperature control
- Defrost timer for natural, electric or hot-gas defrost with fan control
- Integrated timer and alarm functions
- All parameters and functions are programmable:
  - via standard Web browser (EC2-xx2 models)
  - via LON communication (EC2-xx1 models)
  - with integral keypad
- Password protection to eliminate unauthorized use
- Multiple language support ([www.emersonclimate.eu](http://www.emersonclimate.eu))
- Standard 29 x 71 mm cutout dimensions
- 2 1/2 digit display in °C or °F
- CE approved

## Communication LON (see page 159)

- Echelon® LON FTT-10 interface based on the Lonworks® standard for monitoring and configuration through a supervisory system

## Communication TCP/IP Ethernet

- Web Server function provides monitoring and configuration through a standard web browser. Ethernet interface, as used in most office PCs
- Graphical visualisation via built-in Web pages
- Fixed or dynamic TCP/IP address with username and password
- Alarms via e-mail
- Up to 30 days datalog

## Options

- Standard screw terminal kit K02-000 available for all models. OEM crimp versions available upon request
- Ethernet cable ECX-N60 for EC2-xx2
- NTC temperature sensors
- Transformers for 230VAC mains

## Example for Web page monitoring

# Coldroom Controller Series EC3

Temperature and Superheat Control of EX4 ...EX8 (Stepper Motor)

## Features

- Superheat control with self-adapting algorithm for Stepper Motor driven ECVs (EX4 ... EX8)
- Thermostat, fan & defrost control
- Limitation of evaporating temperature (MOP)
- Analog inputs: 3 NTC temperature sensors
- With integral backup battery to close Control Valve in case of power loss
- Analog input for suction pressure measurement using Alco PT5 Series pressure transmitters
- Digital inputs for compressor safety and coldroom door contact
- Relay outputs for compressor, defrost and alarm plus programmable relay
- All parameters and functions are programmable:
  - via TCP/IP Ethernet controller (EC3-332)
  - via LON communication (EC3-331)
  - with keypad of optional display unit ECD-001
- Electrical connections via plug-in type screw terminals
- Lightweight aluminum enclosure for DIN rail mounting
- Multiple language support  
(see [www.emersonclimate.eu](http://www.emersonclimate.eu))
- CE approved

EC3-332

ECD-001

## Features of ECD-001 Display Unit

- Connection to EC3 Series via a RJ45 Western Digital plug.  
No further power cables required
- 2 1/2 digit display
- Indicator LEDs for compressor, fan, heater and alarm
- 4 keys allow parameter modification if necessary
- Easy mounting in panels with 71 x 29 mm cutout
- IP65 if mounted in front panel

## Options

- Front mounted ECD-001 Display Unit for temperature and output status indication
- NTC temperature sensors

## Technical Data

### Controller EC3-33x

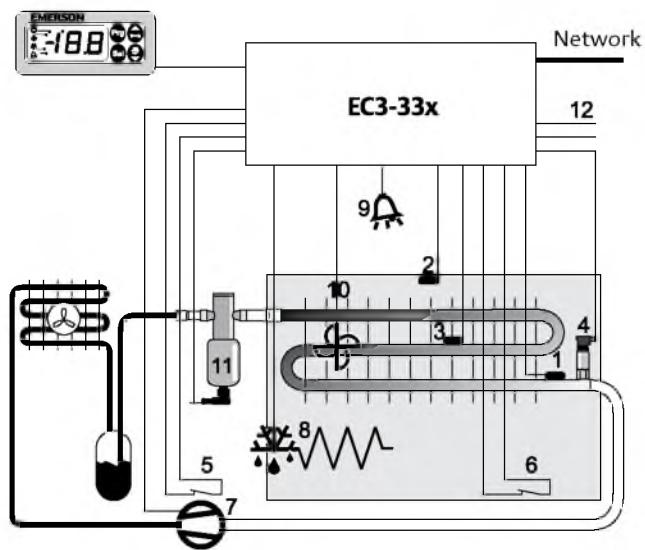

Supply voltage	24 VAC ±10%, 50/60 Hz Class II
Power consumption	25VA max. for EX4 .. EX7 28VA max. for EX8
Plug-in connector size	Removable screw version wire size 0.14 ... 1.5 mm <sup>2</sup>
Communication interface	LON FTT10 (EC3-331) TCP/IP Ethernet with Webserver (EC3-332)
Temperature storage operating	-20 ... +65°C 0 ... +60°C
Humidity	0 ... 80% r.h. non condensing
Protection class	IP 20
Weight	~ 800 g
Mounting	DIN rail mounted

### Display Unit ECD-001

Supply voltage	via ECC-N10 from EC3 controller
LED indicators	Compressor, fan, defrost, alarm outputs LON service pin
Display LED	Numeric segmental display, red, 2 1/2 digits with automatic dec. point betw. ±19.9 switchable between °C and °F
Operating Keys	4 operating keys: Programming, select service/up, defrost/down
Connecting lead	1m (ECC-N10) with RJ45 connectors
Temperature storage operating	-20 ... +65°C 0 ... +60°C
Humidity	0 ... 80% r.h. non condensing
Protection class	IP 65 (front panel with gasket)
Weight	~ 52 g
Mounting	Panel door (71 x 29mm cutout)

## Block Diagram

EC3-33x Coldroom Controller for stepper motor driven ECV

### Inputs

- 1 = Coil out temperature
- 2 = Air temperature
- 3 = Defrost temperature
- 4 = Suction pressure
- 5 = Compressor safety
- 6 = Door contact

### Outputs

- 7= Compressor
- 8= Defrost heater
- 9= Alarm
- 10= Fan
- 11= Stepper motor ECV
- 12= Output signal (4...20 mA)

# Condenser and Condensing Unit Controllers Series EC2

With Web Server Function and TCP/IP or with LON FTT-10 Interface

## Common Features

- Maintenance and alarm management
- Sensor failure handling
- Inputs for common low and common high pressure alarms
- Configuration data stored in non-volatile memory
- Electrical connection via plug-in type screw terminals
- with Web Server Function and TCP/IP or with LON FTT-10 Interface (see page 159)
- Operation and commissioning via local or remote PC
- CE approved

EC2 Controller

## Condenser Controllers

- Compact controller to control condensing pressure by modulation of fan capacity

## Condensing Unit Controllers

- To control a combination of compressors and condenser fans based on suction and condensing pressure respectively
- Control of Copeland Scroll™ Digital Compressors

## Communication LON

- Echelon® LON FTT10 interface based on the LonWorks® standard for monitoring and configuration through a supervisory system

## Communication TCP/IP Ethernet

- Web Server Function provides monitoring and configuration through a standard Web browser. Ethernet interface, as used in most office PCs
- Graphical visualization via built-in Web pages
- Fixed or dynamic TCP/IP address with username and password
- Alarms via e-mail
- Up to 30 days datalog
- Multiple language support (see [www.emersonclimate.eu](http://www.emersonclimate.eu))

## Selection Table

Description	TCP/IP			Lon		
	Type	Part No. single unit	Part No. Kit*	Type	Part No. single unit	Part No. Kit*

### Condenser Controllers

Condenser Controller for up to 4 fans	EC2-712	807 752	808 021	EC2-711	807 751	
Condenser Controller with FSP fan speed control module	EC2-742	807 762	808 023	EC2-741	807 761	808 022

\* EC2-7xx Kits contain terminal kit, pressure transmitter PT5-30M with cable assembly, transformer 25VA (see also page 286).

### Condensing Unit Controllers

Condensing Unit Controller for 2 compressors, 2 fans, with on/off control	EC2-512	807 732	808 015			
Condensing Unit Controller for 2 compressors or 1 Digital Scroll™ and 1 single stage compressor, variable fan speed control with FSP module	EC2-552	807 738	808 019			

\* EC2-5xx Kits contains terminal kit, pressure transmitters PT5-07M and PT5-30M with cable assemblies, transformer 25VA (see also page 182).

### Accessories

Description	Type	Part No.
Terminal kits for EC2-51x, -71x series	K02-211	807 647
Terminal kits for EC2-55x, -74x series	K02-540	800 080

NTC Sensor ECN  single insulated for ambient temperature sensing  -50 ... +50°C (10kΩ at 25°C)	1.5m	ECN-S15	804 304

## Block Diagrams

**EC2-74x Condenser Controller with fan speed control**

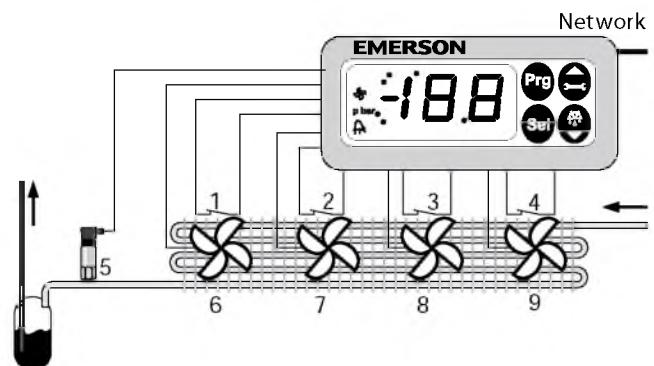

**Inputs**

- 1 = Condenser pressure
- 2 = Ambient temperature

**Outputs**

- 3 = Speed controlled fan
- 4 = Sprinkler
- 5 = Solenoid valve at 2 stage condenser coil
- 10=Fan speed Power Module

**EC2-71x Condenser Controller for up to 4 fans**

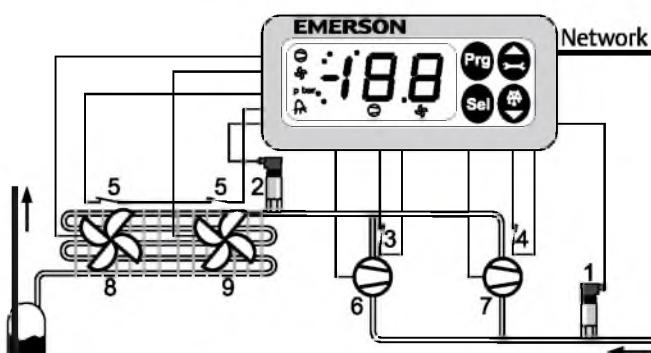

**Inputs**

- 1 = Safety switch fan 1
- 2 = Safety switch fan 2
- 3 = Safety switch fan 3
- 4 = Safety switch fan 4
- 5 = Condenser pressure

**Outputs**

- 6 = Fan 1
- 7 = Fan 2
- 8 = Fan 3
- 9 = Fan 4

**EC2-512 Condensing Unit Controller for up to 2 compressors and 2 fans**

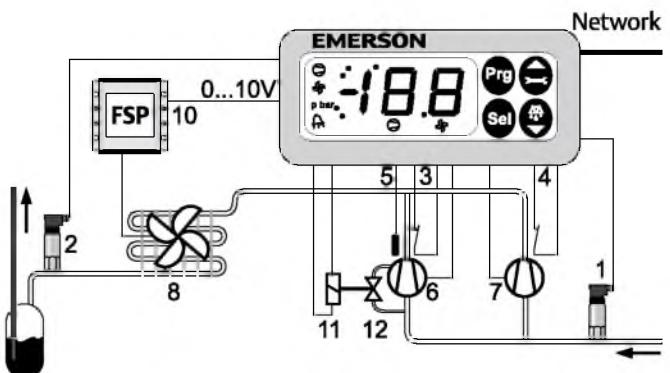

**Inputs**

- 1 = Suction pressure
- 2 = Condenser pressure
- 3 = Safety switch comp 1
- 4 = Safety switch comp 2
- 5 = Safety switches fans

**Outputs**

- 6 = Compressor 1
- 7 = Compressor 2
- 8 = Fan 1
- 9 = Fan 2

**EC2-552 Condensing Unit Controller for 2 single stage compressors or 1 Digital Scroll™ and 1 single stage compressor**

**Inputs**

- 1 = Suction pressure
- 2 = Condenser pressure
- 3 = Safety switch comp 1
- 4 = Safety switch comp 2
- 5 = Temperature input

**Outputs**

- 6 = Digital Scroll™ Compressor
- 7 = Single Stage Compressor
- 8 = Speed controlled fan
- 10 = Fan Speed Power Module
- 11 = PWM Digital Scroll™ Solenoid valve

# Rack and Condenser Controllers Series EC3-652, -672, -752, -812, -932

With Web Server Function and TCP/IP Ethernet Protocol

## Common Features

- Maintenance and alarm management
- Sensor failure handling
- Inputs for common low and common high pressure alarms
- Configuration data stored in non-volatile memory
- Aluminum enclosure for DIN-rail mounting
- Electrical connection via plug-in type screw terminals
- Operation and commissioning via local or remote PC
- Control of Copeland Scroll™ Digital Compressors (EC3-652, EC3-932)
- CE approved
- Communication via:

**TCP/IP Ethernet** with Web Server Function (see page 159)

EC3-6xx

ECD-000

## Features of ECD-000

- Connection to EC3 Series via RJ45 Western digital plug. No further power cables required
- 2 1/2 digit display
- Indicator LEDs for compressor and alarm status
- 4 keys allow parameter modification if necessary
- Easy mounting in panels with 71 x 29 mm cutout
- IP65 if mounted in front panel

## Selection Table

Description	Type	Part No. single unit	Part No. Kit*
-------------	------	-------------------------	------------------

### Rack Controller

for 8 compressors or 1 Digital Scroll™ and 7 single-stage compressors	EC3-652	807 534	808 046
for multistage compressors	EC3-672	807 562	808 029

\* Kit contains terminal kit, pressure transmitters PT5-07M and PT5-30M with cable assemblies, transformer 60VA, 1 NTC sensor 6m (EC3-65x only), see page 286.

### Condenser Controller

for up to 6 stages, one with continuous control output 0 ... 10V, heat recovery control	EC3-752	807 592	808 031
--	---------	---------	---------

\* Kit contains terminal kit, pressure transmitter PT5-30M with cable assembly, transformer 60VA (see also page 286).

### Dual Circuit Controllers

for 4 + 3 compressors	EC3-812	807 602	808 033
-----------------------	---------	---------	---------

\* Kit contains terminal kit, 2 pressure transmitters PT5-07M with cable assembly, transformer 60VA and 3 NTC sensors 6m (see also page 286).

for 4 single stage compressors or 1 Digital Scroll™ and 3 single-stage compressors & 3 fans plus speed control	EC3-932	807 624	808 044
---	---------	---------	---------

\* Kit contains terminal kit, pressure transmitters PT5-07M and PT5-30M with cable assembly, transformer 60VA and 5 NTC sensors 6m (see also page 286).

## Accessories

## Technical Data

### EC3 Controller

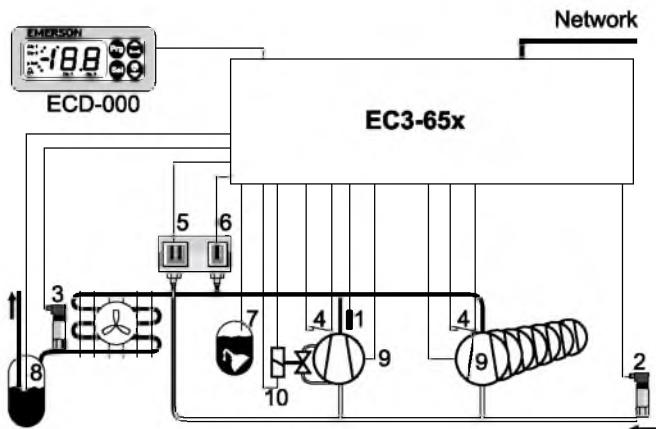

Supply voltage	24 VAC ±10%, 50/60 Hz Class II only
Power consumption	20 VA max.
Plug-in connector	Removable screw terminals
Digital I/Os	wire size 0.5 ... 2.5 mm <sup>2</sup>
Analog I/O	wire size 0.14 ... 1.5 mm <sup>2</sup>
Communication interface	LON: FTT10 TCP/IP: Ethernet with Web Server
Temperature storage operating	-20 ... +65°C 0 ... +60°C
Humidity	0 ... 80% r.h. non condensing
Protection class	IP20
Weight	~ 810 g
Mounting	DIN-rail mount

### ECD-000 Display Unit

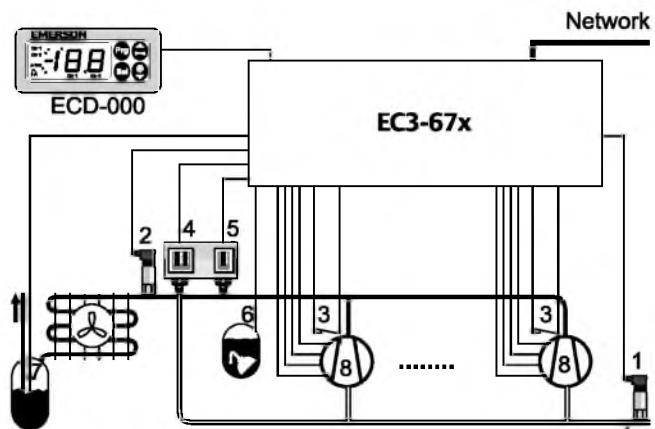

Supply voltage	via ECC-N10 from EC3 controller
Display	Numeric segmental display, LED red, 2 1/2 digits, numeric value device status and alarm indication
LEDs	1 x unit indicator bar/°C 1 x alarm LED
Connecting lead	1,0 m (ECC-N10)
Operating Keys	4 operating keys: programming, service/up, select/down
Temperature storage operating	-20 ... +65°C 0 ... +60°C
Humidity	0 ... 80% r.h. non condensing
Protection class	IP65 (front panel with gasket)
Weight	~ 52 g
Mounting	Panel mount (71x29mm cutout)

## Block Diagrams

**EC3-652 Rack Controller for 8 Single-Stage Compressors or 7 Single-Stage Compressors and 1 Digital Scroll™**

**EC3-672 Rack Controller for Capacity Controlled Compressors**

### Inputs

- 1 = Discharge temperatures of up to 8 compressors
- 2 = Suction pressure
- 3 = Discharge pressure
- 4 = Serial alarm inputs for up to 8 compressors
- 5 = Low pressure alarm
- 6 = High pressure alarm
- 7 = Oil level alarm
- 8 = Refrigerant level alarm

### Outputs

- 9 = for up to 8 compressors
- 10= to control a Digital Scroll™

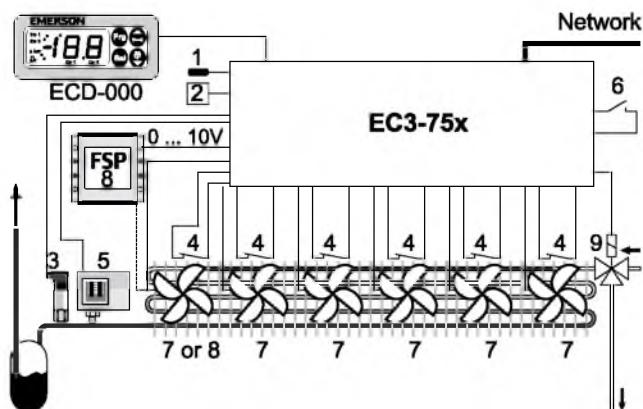

### Inputs

- 1 = Suction pressure
- 2 = Discharge pressure
- 3 = Serial alarm inputs for up to 6 compressors
- 4 = Low pressure alarm
- 5 = High pressure alarm
- 6 = Oil level alarm
- 7 = Refrigerant level alarm

### Outputs

- 8 = 12 outputs for up to 6x2 / 4x3 / 3x4 capacity controlled compressors

## EC3-752 Condenser Controller

### Inputs

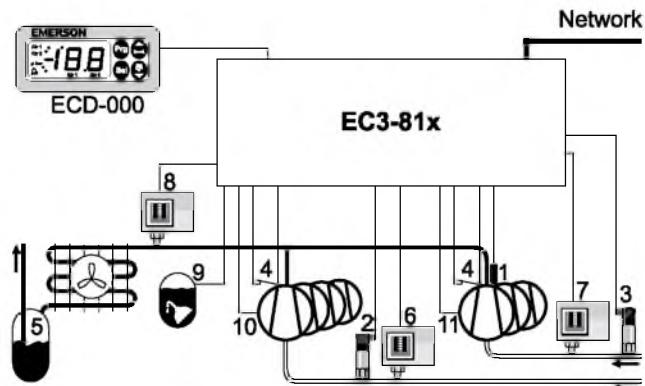

- 1 = Ambient temperature
- 2 = Humidity sensor
- 3 = Condensing pressure
- 4 = Serial alarm inputs for up to 6 fans
- 5 = High pressure alarm
- 6 = Heat recovery demand

### Outputs

- 7 = For up to 6 stages, from which 1 can be speed controlled
- 8 = Speed controlled fan (see 7)
- 9 = Heat recovery solenoid

## Block Diagrams

**EC3-812 Dual Circuit Rack Controller  
(4 + 3 compressors)**

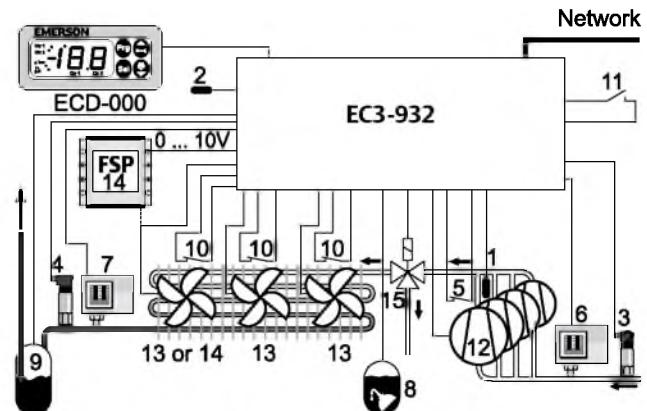

### Inputs

- 1 = Discharge temperature inputs of 3 compressors
- 2 = Suction pressure group A
- 3 = Suction pressure group B
- 4 = Serial alarm input for each compressor respectively
- 5 = Refrigerant level alarm
- 6 = Low pressure alarm group A
- 7 = Low pressure alarm group B
- 8 = High pressure alarm
- 9 = Oil level alarm

### Outputs

- 10 = For up to 4 compressors suction group A
- 11 = For up to 3 compressors suction group B

**EC3-932 Rack and Condenser Controller  
(up to 4 compressors + condenser)**

### Inputs

- 1 = Discharge temperature
- 2 = Ambient temperature
- 3 = Suction pressure
- 4 = Condensing pressure
- 5 = Serial alarm inputs for 4 compressors
- 6 = Low pressure alarm
- 7 = High pressure alarm
- 8 = Oil level alarm
- 9 = Refrigerant level alarm
- 10 = Serial alarms for 3 fans
- 11 = Heat recovery demand

### Outputs

- 12 = Up to 4 compressors
- 13 = Up to 3 fans, from which 1 fan can be speed controlled
- 14 = Speed controlled fan (see 13)
- 15 = Heat recovery solenoid
- 16 = to control a Digital Scroll™

## Network Accessories

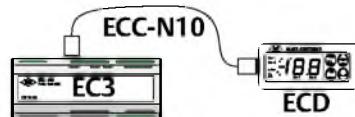

Description	Cable Length	Type	Part No.
Echelon USB-FTT10 interface stick (with USB cable)		ECC-034	804 385
RJ45 to RJ45 Ethernet connection cable	1.5m	ECC-N10	807 860
RJ45 to RJ45 Ethernet connection cable	3.0m	ECC-N30	807 861
RJ45 to RJ45 Ethernet connection cable	5.0m	ECC-N50	807 862
RJ45 to 4pin-connector cable for EC2 TCP/IP Contr.	6.0m	ECX-N60	804 422

### Examples for Use of Network Accessories

LON connected to Laptop ECC-034 interface.

ECC-N10 RJ45 to RJ45 cable for connection between EC3 and ECD

# Drivers for DIGITAL-Copeland™ Compressors EC3-D13/EC3-D23

EC3-D13 driver for digital scroll compressors and 3 cylinder digital semi hermetic compressors

EC3-D23 driver for 4 and 6 cylinder Stream digital semi hermetic compressors

EC3-D13 /EC3-D23 drivers receive an input signal from an existing system controller (0...10V, 1...6V or 4...20mA) and activate digital solenoid valves for stepless capacity control of the digital scroll and digital semi hermetic compressors .

For digital scroll compressors, an input allows monitoring of the discharge temperature or the compressor's DLT signal and to activate an alarm signal if the specified temperature is exceeded.

EC3-D13 with ECD-002

## ECD-002 Display and key pad unit

- Display and interface for parameter setup and status read out
- For front panel mounting

## Selection Chart Kits\*

Description	Type	Copeland Part Number
Driver kit for digital scroll compressors	EC3-D13 kit	8405187
Driver kit for 4 and 6 cylinder Stream digital semi hermetic compressors	EC3-D23 kit	3187293

Kit contain EC3-D13/D23, ECD-002 keypad/Display unit, terminal kit K03-331, connection cable EC3 to ECD 13/23,

Transformer ECT-323 230V AC input / 24 VAC, 25VA

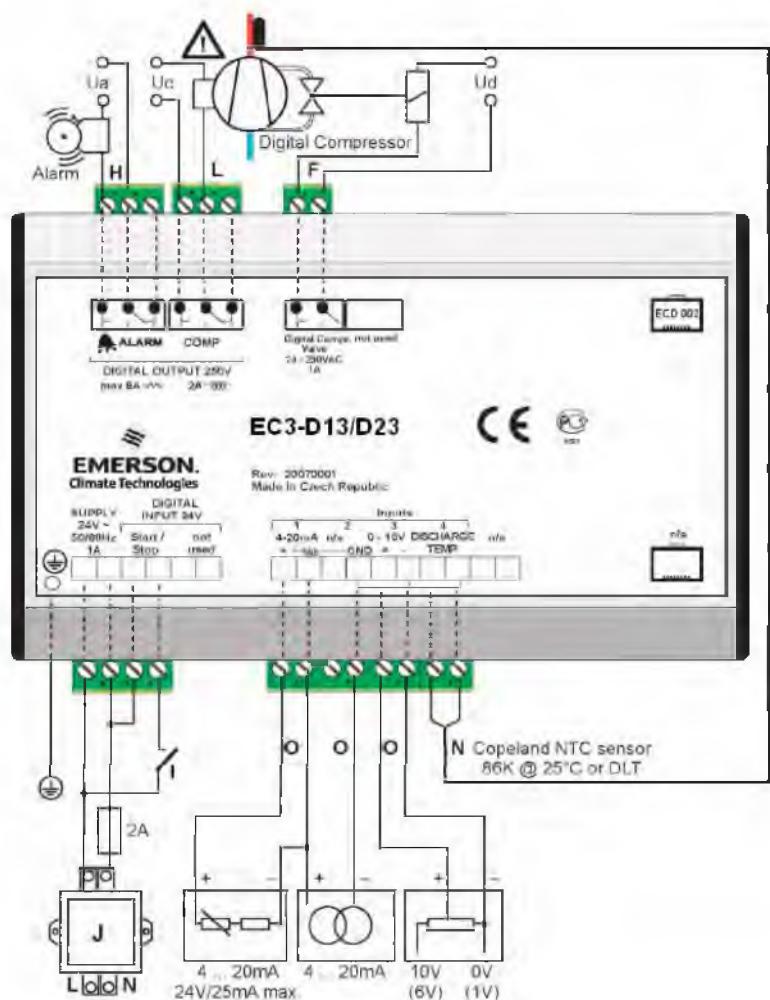

## Selection Chart Individual Components

Description	Type	Copeland Part Number
Driver for digital scroll compressors	EC3-D13	8404935
Driver for digital scroll compressors with terminal kit	EC3-D13 & K03-331	3187306

Display and key pad unit	ECD-002	8403318
Terminal kit for Driver	K03-331	8405165
Connection cable EC3-D13/23 to ECD-002, 1m	ECC-N10	8557782
Transformer 230V AC input / 24 VAC, 25VA, DIN mount	ECT-323	8405176

## Technical Data

Power supply	24VAC ± 10%; 50/60Hz; 1A
Power consumption	5VA max.
Plug-in connector	Removable screw terminals wire size 0.14 ... 1.5 mm <sup>2</sup>
Grounding	6.3 mm spade earth connector
Protection class	IP20
Connection to ECD-002	ECC-Nxx or CAT5 cable with RJ45 connectors
Digital Input	I: 0/24VAC/DC for stop/start function
Analog Inputs	O: 4...20mA, 0...10V, 1...6V N: Copeland NTC temperature sensor (86K at 25°C) or Discharge Line Thermostat (DLT)
Digital Outputs (2):	H: Alarm L: Compressor relay for compressor contactor SPDT; I <sub>max</sub> = 8A res (2A), V <sub>ACmax</sub> = 250V During normal operation (no alarm condition) During alarm condition or power supply is OFF
Activated: Deactivated:	
Digital Scroll valve output	SPST contact, Solid State Relay (SSR) I <sub>max</sub> = 1A res (1A), V <sub>ACmax</sub> = 250V
Ambient temperature range	0 ... 50°C

## Wiring

# Compressor Soft Starter CSS-25U / CSS-32U

The Compressor Soft Starter CSS-25U / CSS-32U is used for switching, protection and starting current limitation of single phase compressors in residential heat pump applications.

## Features

- For motors with maximum operating current up to 25A/32A
- Limitation of starting current to less than 45 A
- Self adjusting for use in 50 Hz or 60 Hz supply
- Self adjusting to motor current - no manual adjustment or calibration necessary
- Alarm relay output
- Start capacitor for improved motor acceleration is switched off after start
- Low voltage shutdown
- Locked rotor recognition and shutdown
- Delay function to limit number of motor starts per hour
- Thyristor protected contactor for long life
- No extra motor contactor needed
- Self diagnostics
- Mounting clip for easy installation allows DIN rail mounting in two directions
- Easy connection by cage type screw terminals

CSS-25U

## CE Standards:

- LVD 2006/95/EC Low Voltage Directive
- EN 60947-1 Low voltage switchgear and controlgear
- EN 60947-4-2 Contactors and motor-starters - AC semiconductor motor controllers and starters
- EN 60335-1, EN 60335-2-40: Safety of household and similar electrical appliances (PCN 805 204 and 805 205 only)
- EMC 2004/108/EC
- ROHS 2002/95/EC

## Selection Chart CSS

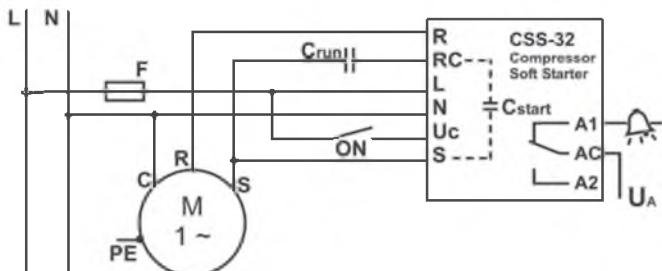

Type	Part No.	Part No. (20 pieces)	Description	I <sub>max</sub>
CSS-32U	805 204	805 204M	Soft Starter incl. mounting clip and operating manual; VDE released version	32A max

CSS-32U	805 200	805 200M	Soft Starter incl. mounting clip and operating manual	32A max
CSS-25U	805 201	805 201M	Soft Starter incl. mounting clip and operating manual	25A max
K00-003	807 663	-	3-pol Screw connector to alarm output for wires up to 2.5mm <sup>2</sup> ; bag with 50 pieces	

## Technical Data

Operating voltage	230 V 50/60 Hz nominal
Compressor starting current	limited to max. 45A
Operating temperature	-20 ... +55°C non condensing
Storage temperature	-20 ... +65°C non condensing
Start capacitor	200 ... 240 uF

Weight	430 g
Protection acc. IEC 529	IP 20
Max. vibration	4 g (at 10 ... 1000 Hz)
Time delay after stop	0,5 to 5 min
Alarm relay, AgNi (SPDT)	250VAC / 3A

## Wiring Diagram

## CSS Contacts:

- R = Output motor run winding
- RC = Output run capacitor
- L = 230V / AC power input
- N = Neutral line
- Uc = Start input (ON if connected to 230V)
- S = Output start winding from start capacitor
- A1, AC, A2 = Alarm relay contact

# Pressure Transmitter Series PT5

Pressure Transmitters convert a pressure into a linear electrical output signal. PT5 has been optimized for refrigeration applications.

## Features

- Sensitive pressure cells with strong primary output signals for the precise operation of superheat, compressor or fan control systems
- Fully hermetic
- PT5-xxM pressure connector 7/16-20 UNF with Schrader valve opener
- PT5-xxT with 6mm x 60mm long tube for applications requiring a fully hermetic system solution
- Vibration, shock and pulsation resistant
- Protection class IP 65
- Easy install M12 electrical connection with pre-assembled cable assemblies available in various lengths
- Output signal 4 to 20 mA
- Calibrated for specific temperature and pressure ranges to fulfill application demands in air conditioning and refrigeration systems
- Standard pressure ranges compatible with former Emerson pressure transmitters - sealed gauge pressure

PT4-Mxx

PT5-xxM

PT5-xxT

## Options

- Other pressure ranges and calibrations
- Delivery in multipacks

## Standards:

- per EMC Directive
- UL Listing E258370

## Selection Chart Transmitters

Type	Part No.	Output signal	Pressure range (bar)	Max. allowable pressure PS (bar)	Test pressure PT (bar)	Burst pressure (bar)	Pressure Connection
PT5-07M	802 350	4 ... 20 mA	-0.8 ... 7	27	30	150	7/16" -20 UNF (with schrader valve opener)
PT5-18M	802 351		0 ... 18	55	63	250	
PT5-30M	802 352		0 ... 30	60	100	400

PT5-18T	802 371		0 ... 18	55	63	250	
PT5-30T	802 372		0 ... 30	60	100	400	
PT5-50T	802 373		0 ... 50	100	150	400	

## Cable Assemblies

Type	Part No.	Temperature range (°C)	Cable length (m)	Leads	
PT4-M15	804 803	-50 ... +80 °C static application -25 ... +80 °C mobile application	1.5	2 x 0,34 mm <sup>2</sup>	
PT4-M30	804 804		3.0		
PT4-M60	804 805		6.0		

## Technical Data

Supply Voltage	Nominal Range (polarity protected)	24 Vdc 7 ... 30 Vdc	Sensor lifetime at full stroke at 25°C	> 10.000.000 cycles
Operating current		max. ≤ 24 mA output	Burst pressure	see selection chart
Protection class acc. to EN 60529		IP65	Medium compatibility	HFC, HCFC, CFC
Load resistance		$R_L \leq \frac{U_B - 7.0V}{0.02A}$	not suitable for ammonia and inflammable refrigerants!	
Temperatures PT5			Materials PT5	
Operating ambient housing		-40 ... 80 °C	Housing cover, pressure connector, diaphragm with medium contact	Stainless steel 1.4534 / AISI 316L
Medium		-40 ... 100 °C		
Transportation and storage		-25 ... 80 °C	Vibration at 10 ... 2000 Hz	5g (IEC 68-2-6)

## Accuracy Performance PT5

	Temperature range	Total error*
PT5-07M/T	-40 ... +20°C	≤ ± 1 % FS
PT5-18M/T	-40 ... +20°C	≤ ± 1 % FS
PT5-30M/T	0 ... +40°C	≤ ± 1 % FS
	-20 ... +60°C	≤ ± 2 % FS
	-40 ... +80°C	typically ≤ ± 2 % FS
PT5-50M/T	0 ... +40°C	≤ ± 1 % FS
	-20 ... +60°C	≤ ± 2 % FS
	-30 ... +80°C	typically ≤ ± 2 % FS

\*) Total error includes non-linearity, hysteresis, repeatability as well as offset and span drift due to the temperature changes.

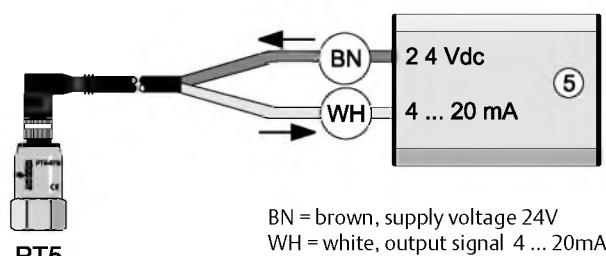

Note: % FS is related to Percentage of Full sensor Scale.

## Electrical Connection

Pressure transmitters PT5 with current output (2-wire connection) offer following advantages:

1. More suitable for signal transmission over long distances
2. Higher immunity to electromagnetic interference

Note: Changing the length of the electrical connection lead beyond 1.5 m can have a negative impact on electromagnetic compatibility. Additional protection may be required.

BN = brown, supply voltage 24V

WH = white, output signal 4 ... 20mA

(5) = Electronic Controller e.g. EC2 & EC3 Series

# Electronic Fan Speed Controller Series FSY

## Features

- Pressure actuated fan speed control
- Adjustable pressure for cut-off
- High Voltage Triac (800 Volts)
- Integrated protection circuit against voltage peaks
- Compact design
- Protection IP65
- Easy mounting and adjustment
- Easy retrofit in existing plants
- No additional gasket required (completely molded into plug)
- Multi-position plug with EMC filter incl. 1,5m (opt. 3 and 6m) cable for flexible installation
-  per EC 89/336/EC (together with FSF cable)
- UL file E183816

FSY-43S

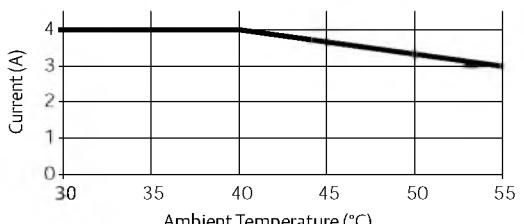

## Selection Table

Type	Part No.	Operational Current A	Adjustment Range bar	Factory Setting bar	Max. Operating Pressure PS bar	Test Pressure PT bar	Pressure Connection
FSY-41S	0 715 533	0.1 ... 4	4.0 ... 12.5	8.0	27	30	S: $\frac{7}{16}$ "-20 UNF female

Weight	approx. FSY-41, -42 FSY-43 FSF-N15 FSF-N30 FSF-N60
Housing material	PC and PA

## Function Diagram

The control behaviour can be easily described by looking at the function of output voltage versus input pressure: In the **maximum range** the FSY provides a constant output voltage of approximately 1% below the supply voltage. The fan is running at maximum speed. Along the **proportional range**, the output voltage varies between maximum and minimum voltage of approximately 50% of the supply voltage. This causes the fan to slow down from maximum to minimum speed.

Further decrease of pressure in the minimum range leads to cut-off of the fan motor. Reincrease of input pressure will start the motor with a hysteresis of approximately 0.7 bar to avoid cycling. The pressure from which motor cuts off is adjustable (see selection table - adjustment range).

## FSE Fan Speed Control Module

Electronic Fan Speed Control Modules FSE generate a 0...10V signal, which is used to control the speed of condenser fan motors in commercial refrigeration and air-conditioning systems. Ideal for use with high efficient EC-motors but can be also used with phase cut controllers for induction motors.

### Features

- Energy saving due to improved cooling efficiency
- Pressure for minimum speed adjustable
- Small proportional band and large hysteresis to minimize cycling at small pressure changes
- Reduced fan noise level during low ambient temp. conditions
- Improved overall performance of cooling system
- Easy installation with cables for power supply and motor connection factory wired
- IP 67 protection for outdoor mounting
- UL file nr.: E355325

PS3-N30	804 581	3	0.75 mm <sup>2</sup>	-25/+80	3.0
PS3-N60	804 582				6.0

### Technical Data FSE

Supply Voltage	10V; supplied by controller
Operating current 0...10 VDC output	max. 1 mA
Medium compatibility	HFC, HCFC, POE-, synthetic and mineral oils
Protection class (IEC529/EN 60529)	IP 65 with cable connector assemblies PS3-Nxx

Pressure connection FSE-01S and FSE-02S FSE-03S	Brass Stainless Steel
Max. operating pressure PS	FSE-01_ : 27bar FSE-02_ : 32bar FSE-03_ : 45bar
Temperature Range Storage and transportation Operation	-30° ... +70°C -20° ... +65°C
Materials Housing cover	PA

# Thermo™ Expansion Valves

## Basic Terms and Technical Information

### Operating principles

Alco Thermo-Expansion valves control the superheat of refrigerant vapour at the outlet of the evaporator. They act as a throttle device between the high pressure and the low pressure sides of refrigeration systems and ensure that the rate of refrigerant flow into the evaporator exactly matches the rate of evaporation of liquid refrigerant in the evaporator. Thus the evaporator is fully utilized and no liquid refrigerant may reach the compressor.

### Description of bulb charges

The application ranges of Thermo-Expansion valves are heavily influenced by the charge selected.

### Liquid charges

The behaviour of Thermo-Expansion valves with liquid charges is exclusively determined by temperature changes at the bulb and not subject to any cross-ambient interference. They feature a fast response time and thus react quickly in the control circuit. Liquid charges cannot incorporate MOP functions. Maximum bulb temperatures shall not exceed 75°C.

### Gas charges

The behaviour of Thermo-Expansion valves with gas charges will be determined by the lowest temperature at any part of the expansion valve (power assembly, capillary tube or bulb). If any parts other than the bulb are subject to the lowest temperature, malfunction of the expansion valve may occur (i.e., erratic low pressure or excessive superheat). Alco Thermo-Expansion valves with gas charges always feature MOP functions and include ballasted bulbs. Ballast in the bulb leads to slow opening and fast closure of the valve. Maximum bulb temperature is 120°C.

### Adsorption charges

These charges feature control characteristics much like MOP charges but avoid the difficulties of cross-ambient interference. Response time is slow but perfectly suitable for common refrigeration systems. Maximum bulb temperature is 130°C.

### MOP (Maximum Operating Pressure)

MOP functionality is somewhat similar to the application of a crankcase pressure regulator. Evaporator pressures are limited to a maximum value to protect compressor from overload conditions. MOP selection should be within maximum allowed low pressure rating of the compressor and should be at approximately 3K above evaporating temperatures.

**Practical hint:** Superheat adjustments influence the MOP:

Increase of superheat: Decrease of MOP

Decrease of superheat: Increase of MOP

### Static superheat

Alco Thermo-Expansion valves are factory preset for optimum superheat settings. This setting should be modified only if absolutely necessary. The readjustment should be at the lowest expected evaporating temperature.

### Subcooling

Subcooling generally increases the capacity of the refrigeration system and may be accounted for when dimensioning an expansion valve by applying the correction factor  $K_t$ . The capacity corrections for evaporating temperature, condensing temperature and subcooling are all incorporated in  $K_t$ . These are, in particular the liquid density upstream from the expansion valve, the different enthalpies of liquid and vapour phase refrigerants, as well as certain parts of flash gas after expansion. The percentage of flash gas differs with various refrigerants and depends on system conditions.

Heavy subcooling results in very small flash gas amounts and therefore increases expansion valve capacities. These conditions are not covered by  $K_t$ . Likewise, small flash gas amounts lead to reduced evaporator capacities and may result in substantial discrepancies between the capacities of the Thermo-expansion valve and the evaporator. These effects must be considered during component selection when designing refrigeration circuits. In cases when subcooling exceeds 15 K, sizing of components ( $K_t$ ,  $K_{\Delta p}$ ) should be modified accordingly. The field practice indicates the following correction factors can be used to compensate the effect of the subcooling (liquid hammering) in addition to the use of correction factors  $K_t$ , and  $K_{\Delta p}$ .

Subcooling	20K	30K	40K	50K	60K
Correction factor	0.8	0.7	0.6	0.5	0.4

Emerson Climate Technologies will be happy to assist you. Please contact the application engineering department.

### Dimensioning

To correctly select a Thermo-Expansion valve on a system, the following design conditions must be available:

- Cooling capacity  $Q_0$
- Effective pressure differential across Thermo-Expansion valve  $\Delta p$
- Evaporating temperature/pressure
- Lowest possible condensing temperature/pressure
- Liquid temperature
- Type of refrigerant

As opposed to single substances (e.g. R134a etc.) where the phase change takes place at a constant temperature/pressure, the evaporation and condensation of **zeotropic blend R407C** is in a gliding form (e.g., at a constant pressure the temperature varies within a certain range) through evaporators and condensers. The evaporating/condensing pressure must be determined at saturated temperatures (bubble/dew points) for dimensioning of Thermo®-Expansion valves.

To facilitate valve dimensioning for other than standard conditions, Emerson Climate Technologies offers a Selection Tool. This can be ordered from all Emerson sales offices.

See [www.emersonclimate.eu](http://www.emersonclimate.eu) for contact addresses, email, phone numbers or download.

## Example

Cooling capacity of a system:	18 kW
Refrigerant:	R407C
Condensing temperature (saturated liquid):	+35°C (Condensing pressure will be 15.5 bar)
Evaporating temperature (saturated vapour):	0°C (Evaporating pressure will be 4.61 bar)
Subcooling:	1 K
Pressure drops through liquid line:	2.2 bar
Pressure drops through evaporator:	0.3 bar
Required type of Thermo®-Expansion valve:	T-series

To calculate the nominal capacity the following formula has to be used:

$$\text{Cooling capacity} \times K_t \times K_{\Delta p} = \text{Nominal capacity}$$

1. Selected **Kt-factor** according to refrigerant, liquid and evaporating temperature from table on page 207.

$$K_t = 0.98 \text{ (for this example)}$$

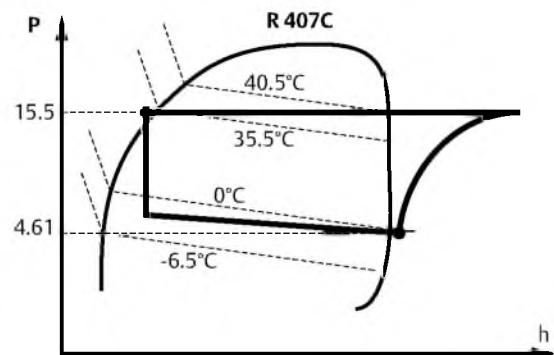

2. Determine pressure differential across the Thermo®-Expansion valve using condensing pressure, subtract evaporating pressure and all other possible pressure losses (pressure drops in evaporator, drier, solenoid valve, liquid distribution...).

For this example:

$$\Delta p = 15.5 - (4.61 + 2.2 + 0.3) = 8.39 \text{ bar}$$

Select **K $\Delta p$**  factor from table on page 207:

$$K_{\Delta p} = 1.15 \text{ (for this example)}$$

3. Multiply cooling capacity with **Kt** and **K $\Delta p$** , to find nominal capacity for Thermo-Expansion valve.

$$Q_n = 18 \times 0.98 \times 1.15 = 20.29 \text{ kW}$$

Select Thermo-Expansion Valve from table on page 202: TCLE550 NW (for this example).

*Please note that all evaporating/condensing temperatures in this catalogue are based on saturated vapour/liquid temperatures.*

## Selection Guide for Expansion Valves

Series	Selection Criteria				Catalogue Page
	Capacity Range kW (R 404A)	Evaporating Temp. Range °C	Main Application	Features	
TI	0.4 to 14.2	+20 to -45	Refrig./Air-Cond. Heat Pumps	Exchangeable Orifices	190
TX3	0.8 to 15.0	+20 to -45	Refrig./Air-Cond. Heat Pumps	Hermetic, Superheat adjustable, optional with check valve	198
TX6	13.3 to 57.0	+20 to -45	Air-Cond. Heat Pumps	Hermetic, Superheat adjustable	200
T	2 to 209	+30 to -45	Refrig./Air-Cond. Heat Pumps	Exchangeable Orifices, Power-Assembly and Flange	202
ZZ	1.9 to 81.2	-45 to -120	Low Temperature Application	Exchangeable Orifices, Power-Assembly and Flange	208
L	2 to 154	+30 to -50	Liquid Injection Superheat Control	Exchangeable Orifices, Power-Assembly and Flange	211
935	5.2 to 43.5	+30 to -45	Liquid Injection Temperature Control	Exchangeable Orifices, Power-Assembly and Flange	213

# Thermo™-Expansion Valves Series TI

New valve design, exchangeable orifices

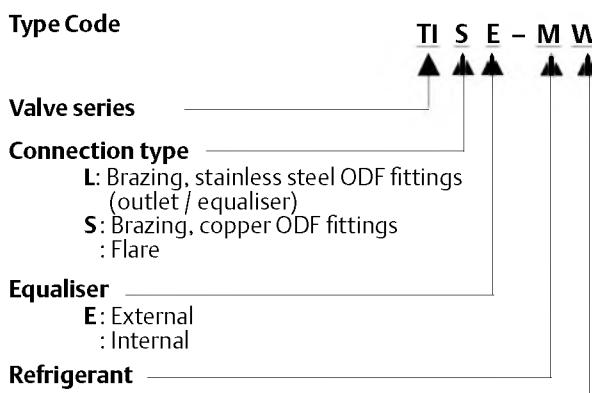

## Features

- Laser welded diaphragm with large diameter for high reliability and maximum life time
- Constant superheat across wide application ranges
- Easy and precise superheat setting by modified threads
- TIE with stainless steel fittings allow brazing without wet rags
- With capacities between 0.4 kW and 14.2 kW (R404A) ideally suited for service work
- Internal or external equaliser
- Brazing and flare connections available
- Capillary tube length 1.5 m
- PS: 45 bar. TS: -45 ... +75°C
- No CE marking according art. 3.3 PED 97/23 EC

TI-E

## Type Code

### Valve series

### Connection type

L: Brazing, stainless steel ODF fittings (outlet / equaliser)

S: Brazing, copper ODF fittings  
: Flare

### Equaliser

E: External  
: Internal

### Refrigerant

### Charge

W: Liquid (without MOP feature)

Wxxx: Vapour (with MOP feature)

ADxxx: Adsorption (similar MOP feature)

Inlet: Flare 5/8"-18UNF for 6mm, 8mm., 10mm, 1/4", 5/16" and 3/8" tubes

Outlet: Flare 3/4"-16UNF for 12mm and 1/2" tubes.

Solder metric: ODF for 12mm tubes. Solder inch: ODF for 1/2" tubes

Ext. Equalizer: Flare 7/16"-20UNF for 6mm and 1/4" tubes.

Solder metric: ODF for 6mm tubes. Solder inch: ODF for 1/4" tubes

## Quick Selection Tables

Published capacity data at 1 K subcooling at the inlet of the expansion valve and 1.5 bar pressure drop in the refrigeration system. For proper valve selection especially in case of high pressure drops, we recommend the use of correction factors (see page 204).

To facilitate valve dimensioning for other than the standard conditions, Emerson Climate Technologies offers a Selection Tool ([www.emersonclimate.eu](http://www.emersonclimate.eu)).

# Thermo™-Expansion Valve Series TX3

For OEM use, hermetic design

## Features

- Hermetic design with solder connections
- Internal or external equalizer
- External superheat adjustment
- Large diaphragm eliminates disturbances to the valve and provides smoother valve control
- Very compact size
- Version with internal check valve eliminates external check valve for heat pump applications
- Capillary tube length 1.5m
- PS: 45bar. TS: -45 ... +120°C
- Packaging units with 24 pieces, no single packs

## MOP

MOP (bar)	Upper limit of Evaporating Temperature Range					
	R134a	R22	R407C	R404A	R410A	R507
2.3				-18°C		-18.7°C
3.3	+11°C					
6.4		+13°C	+14.5°C			
12.9					+17°C	

Pressures are given in gauge pressure.

## R407C for heat pump applications

Nominal Capacity	less MOP		Adjustable with internal check valve and special liquid charge for heat pump applications	Equalizer	Inlet x Outlet Solder/ODF
	Type	Part No.			
3.9	TX3-N63	806801M		Ext. 1/4"	1/4" x 3/8"
5.6	TX3-N64	806802M		Ext. 1/4"	3/8" x 1/2"
8.4	TX3-N65	806803M		Ext. 1/4"	3/8" x 1/2"
11.6	TX3-N66	806804M		Ext. 1/4"	3/8" x 1/2"
14.2	TX3-N67	806805M		Ext. 1/4"	1/2" x 5/8"
16.9	TX3-N68	806806M		Ext. 1/4"	1/2" x 5/8"
23.0	TX3-N69	806807M		Ext. 1/4"	1/2" x 5/8"

Nominal capacity (Qn) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling
R407C	+4°C dew point	+38°C bubble p. +43°C dew point	1K
others	+4°C	+38°C	1K

Valve selection for other operating conditions see page 204 or use the Selection Tool (download from [www.emersonclimate.eu](http://www.emersonclimate.eu)).

# Thermo™-Expansion Valve Series TX6

Hermetic design

## Features

- Balanced port design for constant superheat operation over a wide application range under variation of condensing pressure
- Hermetic monobloc design with solder connections for minimal leakage
- Large diaphragm eliminates disturbances to the valve and provides smoother and consistent valve control
- Tailored charges for different applications
- External equalizer
- External superheat adjustment
- PS: TX6-H/N/M/Sxx : 31bar. TX6-Zxx: 42bar
- TS: -45 ... +65°C
- No CE marking according art. 3.3 PED 97/23 EC

## Standard MOP

Refrigerant	MOP			Evaporating temperature range
	Code	(bar)	°C	
R134a	M1	3.8	+14	-45 ... +10°C
R22	H1	6.9	+15	-45 ... +12°C
R407C	N1	6.9	+17	-45 ... +14°C
R410A	Z1	12.1	+16	-45 ... +15°C

Note: All temperatures are saturated/dew point. Pressures are given in gauge pressure.

Nominal capacity (Qn) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling
R407C	+4°C dew point	+38°C bubble p. +43°C dew point	1K
R22, R134a, R410A	+4°C	+38°C	1K

Valve selection for other operating conditions see page 204 or use the Selection Tool (download from [www.emersonclimate.eu](http://www.emersonclimate.eu)).

# Thermo™-Expansion Valve Series T

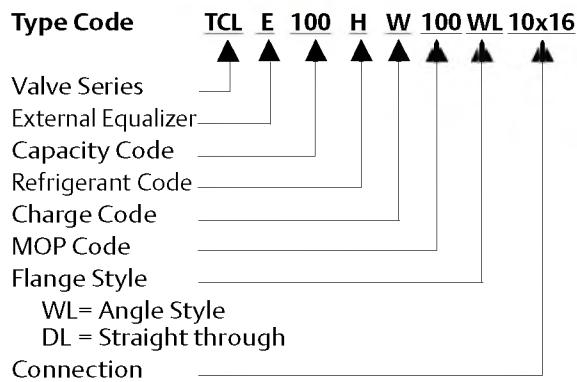

Exchangeable Power Assemblies and Orifices

## Features

- Modular design for economical logistics and easy assembly and servicing
- Very good stability is attained because of the large forces generated by the large diaphragm diameter
- High quality materials and processes for high reliability and long lifetime
- Superior partial load performance due to double seat orifice design (TJRE, TERE, TIRE & THRE)
- Biflow capability for applications in heat pumps
- Capillary tube length 1.5 m (TCLE, TJRE) and 3m (TERE, TIRE & THRE)
- PS: 31 bar. TS: -45 ... +65°C
- No CE marking according art. 3.3 PED 97/23 EC

TCLE

# Correction Tables for Thermo™-Expansion Valves

## Series TI, TX3, TX6, T and L

Valve selection for operating conditions  
other than nominal conditions:

$$Q_n = Q_o \times K_t \times K_{\Delta p}$$

$Q_n$ : Nominal valve capacity

$K_t$ : Correction factor for evaporating and liquid temperature

$Q_o$ : Required cooling capacity

$K_{\Delta p}$ : Correction factor for pressure drop at valve

# Thermo™-Expansion Valve Series ZZ

for Low Evaporating Temperatures between -45 and -120°C

## Features

- Modular design for economical logistics and easy assembly and servicing
- Very good stability is attained because of the large forces generated by the large diaphragm diameter
- High quality materials and processes for high reliability and long lifetime
- Capillary tube length 3 m
- PS: 31 bar. TS: -120 ... +65°C
- No CE marking according art. 3.3 PED 97/23 EC

ZZCE

Type Code	ZZC E 1 1/2 H W 35 WL 10x16
Valve Series	ZZC
External Equalizer	E
Capacity Code	1
Refrigerant Code	1/2
Charge Code	H
MOP Code	W
Flange Style	35
WL=Angle Style	WL
DL=Straight through	DL
Connection	10x16

XC 726	H	W	35	-	2B
Power Assembly					
Refrigerant Code					
Charge Code					
MOP Code					
Capillary Tube Length					
External Equalization					

## Available upon special request:

- Power assembly with solder connection for external pressure equalization
- Non-standard MOPs
- Non-standard charges
- Non-standard connection sizes (Selection see page 217)

**Attention:** To withstand stress at extremely low temperatures, thermo expansion valves series ZZ feature bronze bolts.

Nominal capacity (Qn) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling
R22, R23, R404A, R507	+4°C	+38°C	1K

Valve selection at other operating conditions see page 209

Preferred MOPs

## Correction Tables for Series ZZ

Valve selection for operating conditions other than specified on page 208:

$$Q_n = Q_o \times K_t \times K_{\Delta p}$$

$Q_n$ : Nominal valve capacity

$Q_o$ : Required cooling capacity

$K_t$ : Correction factor for evaporating and liquid temperature

$K_{\Delta p}$ : Correction factor for pressure drop at valve

# Liquid Injection Valve Series L

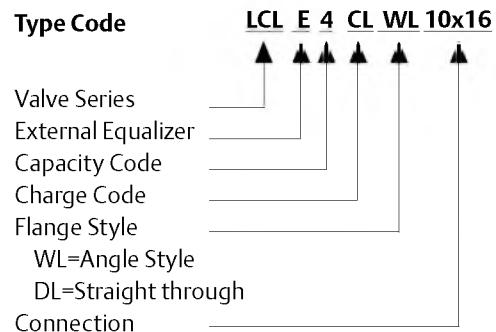

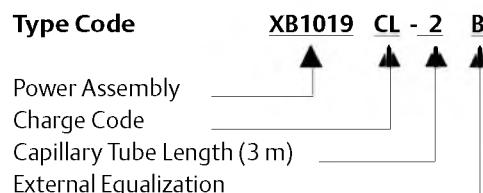

Exchangeable Power Assemblies and Orifices

## Features

- Applications for Series L valves include superheat control (de-superheating of suction gas i.e., in hotgas bypass systems and interstage cooling in multiple stage compressors)
- Modular design for economical logistics and easy assembly and servicing
- Very good stability is attained because of the large forces generated by the large diaphragm diameter
- High quality materials and processes for high reliability and long lifetime
- Superior partial load performance due to seat orifice design (LJRE, LERE & LIRE)
- Capillary tube length 3 m
- PS: 31 bar. TS: -45 ... +65°C
- No CE marking according art. 3.3 PED 97/23 EC

## Correction Tables for Series L

### Valve selection for desuperheating of suction gas:

The required desuperheating capacity  $Q_{des}$  has to be multiplied with the correction factors on page 204.

$$Q_{des} \times K_t \times K_{\Delta p} = Q_n$$

$Q_{des}$ : Required desuperheating capacity  
 $K_t$ : Correction factor for evaporating and liquid temperature  
 $K_{\Delta p}$ : Correction factor for pressure drop at valve  
 $Q_n$ : Nominal valve capacity

### Valve selection for desuperheating of suction gas in conjunction with hotgas-bypass regulation:

The required bypass capacity  $Q_{Byp}$  has to be multiplied with correction factor  $K_{ti}$  per table below.

$$Q_{Byp} \times K_{ti} = Q_n$$

$Q_{Byp}$ : Required bypass capacity  
 $K_{ti}$ : Correction factor for evaporating temperature  
 $Q_n$ : Nominal valve capacity

Correction factors based on 20K superheat suction gas at the inlet of compressor, discharge temperature 28K above isentropic compression and 1K subcooling.

# Liquid Injection Valves Series 935

Exchangeable Power Assemblies and Orifices

## Applications

- Series 935 valves are applied as temperature controls.

Applications include:

- Desuperheating of discharge gas on compressors. In this case bulbs are mounted on the high pressure outlet of the compressor

- Control of compressor oil temperatures

- Series 935 valves shall not be used to control superheat

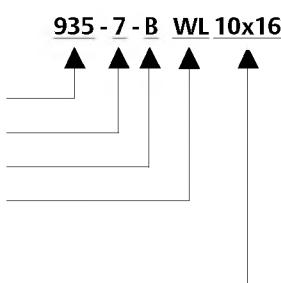

## Features

- Modular design for economical logistics and easy assembly and servicing
- Very good stability because of the large forces generated by the large diaphragm diameter
- High quality materials and processes for high reliability and long lifetime
- Combinations of different charges with various orifice springs cover a very large application range
- PS: 31 bar, TS: -45 ... +65°C
- No CE marking according art. 3.3 PED 97/23 EC
- Non-standard connection sizes see page 217

# Solenoid Valves

## 2-Way-Solenoid Valves

### Basic Terms and Technical Information

#### Operating principles

**Directly actuated:** The magnetic field of the solenoid coil forces a movement of the plunger and thus causes the opening of the valve seat.

**Servo actuated:** The magnetic field of the solenoid coil is only utilized for the opening of the pilot valve seat. The necessary energy to actuate the piston or diaphragm of the main valve seat is provided by the refrigerant flow and results in a certain pressure drop.

#### Minimum Pressure Drop

Directly actuated solenoid valves do not require a minimum pressure drop for proper operation.

Servo operated solenoid valves require a minimum pressure drop of approximately 0.05 bar to remain fully open. In case of insufficient refrigerant flow, this value will not be reached and the solenoid valve may close unintentionally. These closures may lead to malfunctions and oscillations in the refrigeration circuit. Improper sizing of solenoid valves (i.e., use of excessively large solenoid valves) is the main cause of this effect. This is particularly important in capacity controlled refrigeration circuits.

Therefore the decisive factor for proper solenoid valve sizing is the respective capacity of the valve and not its connection size.

Formula for calculating the actual pressure drop of a solenoid valve:

$$\Delta_{p1} = \Delta_{p2} \times (Q_{n1}/Q_{n2})^2$$

$\Delta_{p1}$ : Actual pressure drop  
 $\Delta_{p2}$ : Nominal pressure drop at  $Q_{n1}$   
 $Q_{n1}$ : Calculated nominal capacity  
 $Q_{n2}$ : Nominal capacity of selected valve

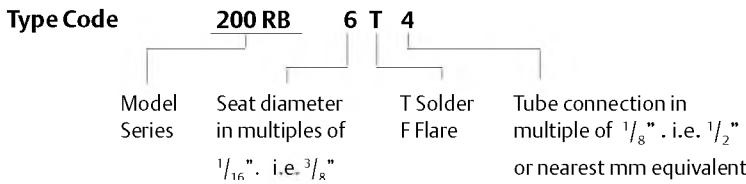

#### Maximum Operating Pressure Differential (MOPD)

MOPD is the maximum pressure differential between inlet and outlet of the solenoid valve which permits proper opening of the valve. When used with Alco AC solenoid coils all Alco solenoid valves employ 25 bar MOPD.

Operation in conjunction with DC solenoid coils lead to reduced MOPD values depending on valve type and size. The **DS2 Chopper Plugs** allow the use of 24VAC coils with 24VDC by converting the DC in an AC voltage. Please contact Emerson Climate Technologies application engineering for additional details.

### Selection Guide for Solenoid Valves

## Coils ASC

### Standards

- Alco® ASC Coils and cable assemblies conform to Low Voltage Directive

ASC

Type	Part No.	Voltage	Power Input	Electr. Connection	Protection
ASC 230V / 50Hz	801 064		8 W	without plug, see cable assemblies	IP65 with plug / cable assembly
ASC 120V / 50Hz	801 063				
ASC 24V / 50Hz	801 062				
ASC 24V DC	801 974	DC	15 W		
DS2-N15 + ASC 24VAC	804 620 + 801 062	DC	3 W	with plug and cable assembly	IP65

Note: Coils are delivered with mounting clip.  
Please order cable assemblies separately.

ASC-N15

### Cable Assemblies for ASC Coils

Type	Part No.	Temperature Range	Cable length	Wire diameter	Connector Type
ASC-N15	804 570	-50 .. +80°C for stationary use only	1.5m	3 x 0.75 mm <sup>2</sup>	loose wires
ASC-N30	804 571		3.0m		
ASC-N60	804 572		6.0m		

### Cable Assembly with 24V DC Chopper Plug

- Enables standard 24V AC Coil to be used for DC applications
- Low power assumption (3W only)
- No MOPD degradation

DS2-N15      ASC 24V / 50Hz

Type	Part No.	Temperature Range	Cable length	Wire diameter	Connector Type
DS2-N15	804 620	-25 .. +80°C	1.5 m	2 x 0.75 mm <sup>2</sup>	loose wires

### Other Accessories for Solenoid Valves

Type	Part No.	Description
X 11981-1	027 451	Service tool for 110RB, 240RA, 540RA, 3031
X 13740-1	027 600	Clip for coil
PG9 Plug	801 012	Plug according to DIN 43650 with cable gland PG 9
PG11 Plug	801 013	Plug according to DIN 43650 with cable gland PG 11

## 2-Way Solenoid Valves Series 110, 200, 240

Normally Closed

### Features

- Compact size
- Snap-on clip for attaching solenoid coils
- No disassembly necessary for soldering

110 RB

200 RB

240 RA

### Standards

- 240 RA 16T11 and 20 are CE marked per PED

	T17-M	801 174	54	2-1/8	

### Special Versions:

- Manual stems available upon request for Series 240 RA 8 to 240 RA 16 (Type M).

Manual stems standard on Series 240 RA 20.

### Options:

- Actuation coils available for various voltages. see page 221

## 2-Way Solenoid Valves Series 540

Normally Open

### Features

- Compact size
- Snap-on clip for attaching solenoid coils
- No disassembly necessary for soldering

540 RA

# Correction Tables for the Selection of Solenoid Valves

For use with 110 RB, 200 RB, 240 RA and 540 RA Series

Valve selection for operating conditions other than nominal:

$$Q_n = Q_o \times K_t \times K_{\Delta p}$$

$Q_n$ : Nominal valve capacity

$K_t$ : Correction factor for evaporating and liquid temperature

$K_{\Delta p}$ : Correction factor for pressure drop at valve

$Q_o$ : Required cooling capacity

The pressure drop can be calculated with the following formula:

$$\Delta P_0 = \Delta P_n * \frac{Q_0^2}{Q_n^2}$$

$$\Delta P_n = 0.15 \text{ bar}$$

$\Delta P_n$ : Pressure drop under nominal conditions

## 1. Suction Gas Application

## 3-Way Solenoid Valves Series M36

### Features

- For heat reclaim application
- Pilot connection to suction line required. no minimum pressure drop
- Compact size
- Snap-on clip for attaching solenoid coils
- No disassembly necessary for brazing
- Max. allowable pressure PS: 35 bar

### Options:

- Actuation coil and cable assemblies available for various voltages, see page 221

M36-118

M36-078 with ASC Coil  
and DS2 Chopper Plug

### Capacity Data

Type	Part No.	Connection Solder/ODF		Nominal Capacity $Q_n$ (kW)			kv-Value $m^3/h$	Coil Type
		mm	inch	R134a	R22	R404A / R507		
M36-078	801 420	22	7/8	28.9	35.1	31.3	6.7	ASC (Page 221)
M36-118	801 421		1-1/8					

Nominal capacities at +38°C condensing temperature, +4°C evaporating temperature (saturated pressures / dew point), 0.15 bar pressure drop between valve inlet and outlet.

$Q_o$ : Required cooling capacity

For other operating conditions multiply required capacity  $Q_o$  with correction factors  $K_t$  and  $K_{\Delta p}$ .

$K_t$ : Correction factor for evaporating and liquid temperature

$$Q_o \times K_t \times K_{\Delta p} = Q_n$$

$K_{\Delta p}$ : Correction factor for pressure drop at valve

$Q_n$ : Nominal valve capacity

### Correction Tables

# Mechanical Pressure Regulators

## Basic Terms and Technical Information

### Capacity Regulators

Regulator series ACP and CPHE are hot gas bypass regulators and serve the purpose of compensating excess compressor capacity. Thus they prevent the generation of evaporator pressures below predetermined levels.

In case of hot gas injection into the suction line, a liquid injection valve in conjunction with a solenoid valve is required to desuperheat the excessively hot suction gas. The capacity should not be reduced below 60% of maximum in this application to avoid oil return problems.

With hot gas injection at the evaporator inlet, no liquid injection valve is necessary. The injection must be such that the incremental gas volume is taken into account. No problems with oil return should be expected even when regulating 100% of capacity.

### Evaporator Pressure Regulators

Series PRE regulators serve the purpose of maintaining evaporator pressure above certain predetermined levels. The most important application is the use of several evaporators with different evaporating temperatures in conjunction with a common suction line.

The freezing of water in water chillers and air conditioning systems can be safely prevented if evaporating temperatures are kept above 0°C, even when loads are greatly reduced.

### Crankcase Pressure Regulators

Series PRC regulators serve the purpose of preventing excessively high suction pressures to protect compressor motors from overloading.

Excessively high suction pressures can occur at start-up of a refrigeration circuit in case of high loads and after defrost. Crankcase regulators are adjusted to the maximum allowed suction pressure rating of the compressors as given by the compressor manufacturers.

### Selection Guide for Pressure Regulators

Selection Criteria	Series			
	ACP	CPHE	PRE	PRC
Capacity Regulator	+	+		
Evaporator Pressure Regulator			+	
Crankcase Pressure Regulator				+

\* Nominal capacities at +38°C condensing temperature, +4°C evaporating temperature (saturated temperatures / dew point) and 1 K liquid subcooling at the inlet of the expansion valve.

# Hot Gas Bypass Regulators Series CPHE

## Features

- High quality materials and processes for high reliability and long lifetime
- Superior partial load performance due to double seat orifice design (CPHE3 to CPHE6)
- Modular design for economical logistics and easy assembly and servicing
- External equalization

Specific connection sizes and flanges available on request.

For selection see page 217

## Technical Data

Adjustment Range	-0.4 ... 5 bar
Factory Setting	1.4 bar
Max. allowable Pressure PS	35 bar
Medium Temperature Range TS	-40°C ... 120°C
Ambient Temperature Range	-40 ... 50°C
Transport Temperature Range	-40 ... 70°C

## Capacity Data CPHE

Nominal capacities at +38°C condensing temperature, +4°C evaporating temperature (saturated temperatures / dew point) and 1 K liquid subcooling at the inlet of the expansion valve.

Specific connection sizes and flanges available on request. For selection, see page 217.

## Correction Tables for Series ACP and CPHE

For other evaporating temperatures the bypass capacity  $Q_{\text{Byp}}$  shall be multiplied with the correction factor  $K_{\text{Byp}}$ .

$$Q_{\text{Byp}} \times K_{\text{Byp}} = Q_n$$

$Q_{\text{Byp}}$ : Required bypass capacity

$K_{\text{Byp}}$ : Correction factor for evaporating temperature

$Q_n$ : Nominal valve capacity

Refrigerant	Condensing Temperature °C	Correction Factor $K_{\text{Byp}}$

# Evaporator and Crankcase Pressure Regulator Series PRE and PRC

## Features

- Compact design permits minimal space requirements
- Schrader valve on inlet for ease of setting
- Direct operated regulator
- Balanced port design provides accurate pressure control
- Copper tubes for easy soldering

## Technical Data

Refrigerants	HFC, HCFC
Oil compatibility	Mineral, Alkyl Benzene and Polyol-Ester (POE) lubricants

# Pressure Controls

## Basic Terms and Technical Information

### Characteristics

Pressure controls serve various functions, which may be divided into control and protection functions. Examples for control functions are compressor cycling, pump-down or defrost control. Protection functions include pressure limiting and cut out against excessive pressures, against loss of charge or for freeze protection. These functions are performed by operating a set of electrical contacts when exceeding a preset lower or upper pressure limit. Depending on whether they are type tested (TÜV approved) or not they may be referred to by the following terms:

without TÜV approval:	Pressure Control
with TÜV approval:	Pressure Limiter, Pressure Cut Out or Safety Pressure Cut Out

Pressure controls with TÜV approval are tested according to EN 12263 as required by DIN 8901 and EN 378.

### 1. Pressure controls (without TÜV approval)

Pressure controls without type approval may either be of the automatic or manual reset type. Manual reset versions are available for decreasing (manual reset min.) or increasing pressure (manual reset max.).

### 2. Pressure limiters PSL/PSH

Pressure limiters are of the automatic reset type. Limiters for high pressure applications have a double bellows design to act as fail-safe controls.

### 3. Pressure cut outs PZH/PZL

Pressure cut outs are of the manual reset type where reset is possible from the outside of the control without the need for a tool (external reset). Cut outs for high pressure applications have a double bellows design to act as fail-safe controls.

### 4. Safety pressure cut outs PZH/PZLL

Pressure cut outs are of the manual reset type where the reset requires the use of a tool. Typically, the removal of a cover is required in order to press the reset button (internal reset). Cut outs for high pressure applications have a double bellows design to act as fail-safe controls.

### Adjustment of switching points

A pressure gauge should always be used for comparison when adjusting the switching points on pressure controls. The setting scale on the device is intended to serve for orientation, showing the setting range of the upper switching point  $p_{max}$  in bar/psig and the value of the pressure differential  $\Delta p$  as difference between upper switching point  $p_{max}$  and the lower switching point  $p_{min}$ . The upper switching point  $p_{max}$  has to be adjusted on the scale, whereas the lower switching point  $p_{min}$  is given by adjustment of the desired switching differential  $\Delta p$ .

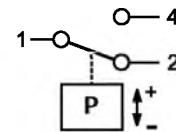

The formula is:

$$\text{Upper switching point - Differential} = \text{Lower switching point}$$

$$P_{max} - \Delta p = P_{min}$$

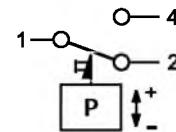

### Function of contacts SPDT

On pressure rise above setting 1-2 opens and 1-4 closes. On pressure drop below setting 1-2 closes and 1-4 opens.

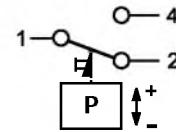

### SPDT with manual reset max.

On pressure rise above setting 1-2 opens and 1-4 closes and latches. The device can be manually reset when the pressure has dropped below setting.

### SPDT with manual reset min.

On pressure drop below setting 1-2 closes, 1-4 opens and latches. The device can be manually reset when the pressure has risen above setting.

### Unit of pressure

All pressures are given in gauge pressure

$$P_{\text{absolute}} = P_{\text{gauge}} + 1\text{ bar}$$

$$1\text{ bar} = 100\text{ kPa}$$

$$1\text{ bar} = 14.5\text{ psi}$$

### Pulsation damping

All high pressure controls with A-connection (7/16"-20UNF, 1/4" SAE male) are equipped with a snubber to protect the pressure element from pulsations.

## Standards and Regulations

BGV D4 (VBG20)	Accident prevention regulations for refrigeration plant.					
DIN 8901	Heat pumps with fluorocarbon refrigerants. Protection of soil, underground and surface water.					
EN 60947-1/ EN 60947-5-1	Specifications for low-voltage switchgear.					
EN 378	Refrigerating systems and heat pumps - Safety and environmental requirements.					
EN 12263:	Refrigerating systems and heat pumps - Safety switching devices for limiting the pressure requirements and tests.					

## Selection Guide for Pressure Controls

Series	Selection Criteria						Catalogue Page	
	Design	Number of Contacts (SPDT)	Adjustable	Protection DIN 40050 IEC 529	Rated Operational Current at 230 V AC			
					Inductive Amp. AC 15	Motor Rating UL		
<b>PS1</b>	Standard Model	1	yes	IP 44	10 A	24 A	240	
<b>PS2</b>	Dual Pressure Switch	1+1	yes	IP 44	10 A	24 A	242	
<b>PS3</b>	Pressure Switch Standard-Types	1	Factory set to fixed values	IP 30 / IP 65	3 A	6 A	244	
<b>PS3</b>	Pressure Switch OEM-Types	1	Fixed values acc. to customer spec. depending on volume	IP 30 / IP 65	3 A	6 A	246	
<b>FD 113</b>	Differential Pressure Switch	1	yes pressure diff. + time delay	IP 30	3 A / 6 A	-	247	

# Pressure Controls Series PS1 / PS2

## Features

- Adjustable pressure range
- Automatic and manual reset versions
- Flare and solder connections
- Shatter resistant contacts
- High operational current, locked rotor max. 144 Amps (LRA)
- Standard SPDT with same operational current rating for both contacts
- Dual pressostat with two separate SPDT for high and low pressure side
- Including sealable blocking plate and mounting screws

## Options

- Convertible reset to reduce stock
- Further pressure connections
- Factory set to customer specification

PS2

PS1

## Standards

- per Low Voltage Directive
- per PED Directive 97/23 EG. TÜV appr. versions only
- Manufactured and tested to standards on our own responsibility
- US LISTED Underwriter Laboratories
- German Lloyd for use on ships, when equipped with marine-type cable gland

## Technical Data PS1 / PS2

Type of Contacts	1 SPDT for PS1 2 separate SPDT for PS2
Inductive Amp. (AC15) Inductive Amp. (DC13)	10 A / 230V AC 0.1 A / 230V DC
Motor Rating, Full Load Amp. Motor Rating, Locked Rotor Amp.	24 A / 120/240V AC 144 A / 120/240V AC

Protection acc. DIN 40050 / IEC 529	IP 44
Ambient Temperature Range Max. Temperature at Pressure Connection	-50°C .. +70°C +70°C
Vibration Resistance (10 to 1000 Hz)	4 g
Cable Entry	Grommet PG 16

**Copper Gasket Set for R 1/4"**  
(7/16"-20 UNF. female)  
100 pcs package  
Part No.: 803 780

# Pressure Controls Series PS3 / Standard types

Compact Pressure Switch with fixed switch-point settings

## Features

- Maximum allowable pressure up to 43 bar / test pressure up to 48 bar
- Standard factory settings from stock in small volumes
- High and low pressure switches
- High temperature version with snubber for direct compressor mounting (range 6)
- Direct mounting reduces the number of joints and thus avoiding potential leakage
- Precise setting and repeatability
- IP 65 protection if used with PS3-Nxx cables with plug (acc. EN 175301-803), no additional gasket required (molded into plug)
- Cables with plug to be ordered separately

## Standards

- per Low Voltage Directive
- per PED Directive 97/23 EG, TÜV appr. versions only
- Manufactured and tested to standards on our own responsibility
- US LISTED Underwriter Laboratories (File No. E85974)

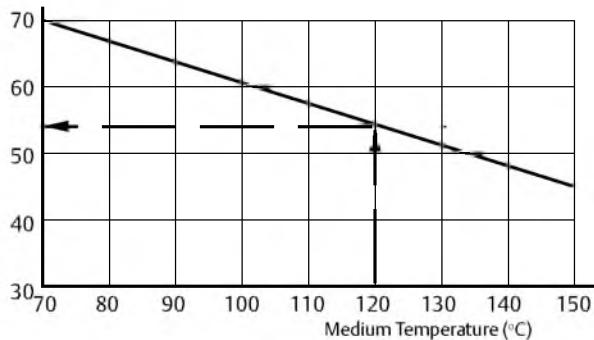

PS3

## Technical Data

Protection according to DIN 40050 / IEC 529	IP 00 IP 30 with terminal cover IP 65 with PS3-Nxx/-Lxx cables with plug or Plug DIN 43650
Inductive Amp. (AC)	3A / 230V AC
Inductive Amp. (DC)	0.1A / 230V DC
Motor rating, full load Amp.	6A / 120/240V AC
Motor rating, locked rotor Amp.	36A / 120/240V AC

Temperature range TS * ambient. storage and transportation medium	-40 °C .. 70 °C -40 °C .. 70 °C (150°C range 6)
Pressure Range PS	- 0.6 .. 43 bar
Vibration resistance (10..1000 Hz)	4 g
Type of contacts	1 SPDT
Medium compatibility	HFC, HCFC

Maximum Ambient Temperature (°C)

\* Note: For high temperature applications, i. e., medium temperatures between 70 °C and 150 °C, the maximum ambient temperature must be derated as per drawing. E.g.: on medium temperature 120 °C the ambient temperature of 55 °C around the switch housing should not be exceeded.

# Pressure Controls Series PS3 / Special Types

For OEM use with settings according to customer's specification,  
minimum order quantity 100 pcs.

## Features

- Maximum allowable pressure up to 43 bar / test pressure up to 48 bar
- For direct mounting on a pressure connection (free standing) or with a capillary tube
- Direct mounting reduces the number of joints and thus avoiding potential leakage
- Direct mounting saves cost for flexible hose and additional fittings
- Precise setting and repeatability
- High temperature version with snubber, for direct compressor mounting (range 6)
- Micro switch for narrow pressure differentials
- Gold plated contacts for low voltage / current applications
- Worldwide approvals
- Easy mounting

## Options

- Low pressure switch with automatic or manual reset
- High pressure switch with automatic or manual reset, standard or high temperature version
- Pressure limiter PSH - standard or high temperature version
- Pressure cut-out PZH - external reset, standard or high temperature version
- Safety pressure cut-out PZHH - internal reset, standard or high temperature version

## Electrical connections (optional)

- Cables with plug in lengths of 1.5m, 3.0m and 6.0m available. No additional gasket required.
- Appliance socket DIN 43650

## Type of contacts (optional)

- Standard (SPDT)
- Micro switch (SPDT)
- Gold plated contacts upon request

## Technical Data

Protection according to DIN 40050 / IEC 529	IP 00 IP 30 with terminal cover IP 65 with PS3-Nxx cables with plug or Plug DIN 43650
Inductive Amp. (AC15)	3 A / 230V AC 1.5 A with microswitch standard 0.1 A with gold plated contacts
Inductive Amp. (DC)	0.1 A / 230V DC
Motor rating, full load Amp.	6 A / 120/240V AC 2.5 A with microswitch
Motor rating, locked rotor Amp.	36 A / 120/240V AC 15 A with microswitch

## Standards

- per Low Voltage Directive
- per PED Directive 97/23 EG. TÜV appr. versions only
  - Manufactured and tested to standards on our own responsibility
  - US LISTED Underwriter Laboratories (File No. E85974)

## Pressure connections

- S:  $\frac{7}{16}$ "-20UNF, female with Schrader opener and snubber (snubber only with high temperature diaphragm)
- A:  $\frac{7}{16}$ "-20UNF,  $\frac{1}{4}$ " SAE male
- U: 6 mm solder. 80 mm length. ODF
- X:  $\frac{1}{4}$ " solder. 80 mm length. ODF
- K: 1 m capillary tube with  $\frac{1}{4}$ " SAE flare nut and Schrader opener
- L: 1 m capillary tube and  $\frac{1}{4}$ " ODM solder connector

## Installation

- Depending on pressure connection, free-standing or with console.

Temperature range TS Ambient, storage and transportation Medium	-40°C ... 70°C -40°C ... 70°C (150°C range 6)
Pressure Range PS	- 0.6 .. 43 bar
Vibration resistance (10..1000 Hz)	4 g (10 to 1000 Hz)
Type of contacts	1 SPDT
Medium compatibility	HFC, HCFC
Available approvals	TÜV, UL
Weight (approx.)	0.1 kg

For more information see datasheet PS3\_e35003.

# Differential Pressure Controls Series FD 113

## Features

- Immediate reset (no cooling down period)
- Precise timing
- Adjustable time delay from 20 to 150 sec (ZU types)
- Separate output signals for operation and alarm
- Suitable for supply voltage 24 to 240 V AC / DC
- Pressure connection: Flare  $\frac{7}{16}$ "-20 UNF,  $1\frac{1}{4}$ " SAE male

## Standards

- per Low Voltage Directive

- Manufactured and tested to standards on our own responsibility

- US LISTED File No. E85974

100 pcs package  
Part No.: 803 780

# Thermostats

## Basic Terms and Technical Information

### Characteristics

Alco® thermostats are electric circuit control devices which open or close an electric contact depending on temperature changes at the bulb.

### Description of bulb charges

The application range of thermostats is mainly determined by the charge. Accordingly various bulb shapes and sizes are necessary.

- **Vapor charge, bulb type A. E. P**

The thermosystem is filled with a medium in vapor phase. A thermostat with vapor charge operates in accordance with temperature changes at the bulb as long as the bulb is the coldest part in the whole system (bellows, capillary tube, bulb). Alco® thermostats are equipped with a bellows heater (82 k Ohm, 230 V) to avoid such conditions. On applications with low current the bellows heater has to be removed. Max. bulb temperature is 150°C (70°C for bulb type E). Response time is very fast.

- **Adsorption charge, bulb type F**

This charge only reacts on temperature changes at the bulb. Max. bulb temperature is 100°C. Response time is slow but perfectly suitable for common refrigeration systems.

### Adjustment of switching points

A thermometer should always be used for comparison when adjusting the switching points on temperature controls. The setting scale on the device is intended to serve for orientation, showing the setting range of the upper switching point  $t_{max}$  in °C and °F and the value of the temperature differential  $\Delta t$  in K as difference between the upper switching point  $t_{max}$  and the lower switching point  $t_{min}$ . The upper switching point  $t_{max}$  has to be adjusted on the scale, whereas the lower switching point  $t_{min}$  is given by adjustment of the desired switching differential  $\Delta t$ . The formula is:

$$\text{Upper switching point - Differential} = \text{Lower switching point}$$

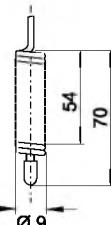

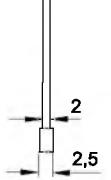

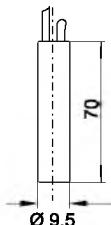

$$t_{max} - \Delta t = t_{min}$$

### Important!

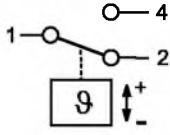

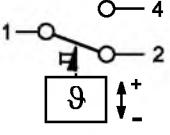

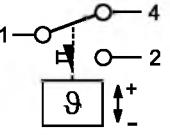

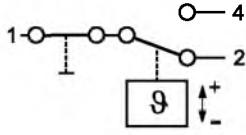

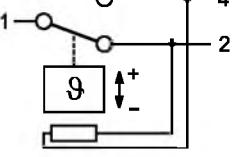

The differential  $\Delta t$  mentioned on the differential scale and in the technical data refers to the upper part of the setting range and the upper switching point.

In the lower part of the setting range an increase of the differential  $\Delta t$  can be expected. The lowest possible lower switching point  $t_{min}$  is mentioned in the selection tables and is helpful to select switching points with large differentials  $\Delta t$  in the lower temperature range.

### Bulb Sizes

A	E	P	F
			
Vapor 2m, capillary with bulb	Vapor coil, 0m	Vapor 2m, capillary with function C and D 6m	Adsorption 2m, capillary with bulb

## Function of Contacts

 <p><b>SPDT</b></p> <ul style="list-style-type: none"> <li>- On temperature rise above setting 1-2 opens and 1-4 closes.</li> <li>- On temperature drop below setting 1-2 closes and 1-4 opens.</li> </ul>	 <p><b>SPDT with manual reset min.</b></p> <ul style="list-style-type: none"> <li>- On temperature drop below setting 1-2 closes. 1-4 opens and latches.</li> <li>- The device can be manually reset when the temperature has risen at least 2K above setting.</li> </ul>	 <p><b>SPDT with manual reset max.</b></p> <ul style="list-style-type: none"> <li>- On temperature rise above setting 1-2 opens and 1-4 closes and latches.</li> <li>- The device can be manually reset when the temperature has dropped 2K below setting.</li> </ul>
 <p><b>SPDT with off switch</b> <b>AUTOmatic - STOP</b></p>		 <p><b>SPDT with bellows heater</b> includes a 82 k Ohm, 230 V AC/DC resistor</p>

## Standards and regulations

Important for the installation of thermostats:

EN 60730-2-9 Specification for temperature controls and temperature cut-outs.

EN 60947-1/  
EN 60947-5-1 Specifications for low-voltage switchgear.

EN 378: Refrigerating systems and heat pumps. Safety and environmental requirements.

# Thermostats Series TS1

## Features

- Adjustable temperatures and differentials
- Shatter resistant contacts
- High operational current, locked rotor max. 144 Amps (LRA)
- Standard SPDT with same operational current rating for both contacts
- Captive terminal and cover screws
- Range and differential individually lockable

## Technical Data

Type of Contacts	1 SPDT
Inductive Amp. (AC15)	10 A / 230 V AC

# Filter Driers

## Basic Terminology and Technical Information

### Function

The purpose of filter driers is to keep the refrigeration circuit clean of water, acid and solid contaminants. In case of contamination, corrosion and ice building can occur, as well as malfunction of the compressor.

### Property of desiccants

#### Molecular sieves

This kind of desiccant has a very good drying effect independent of the oil content of the refrigerant. Molecular sieve is a fast acting desiccant and will remove moisture even when the water content of the refrigerant is low and when the temperature of the liquid refrigerant is high.

#### Activated alumina

Activated alumina incorporate an excellent acid capacity. By selecting a specific mixture of both desiccants, an optimum effect can be achieved to cover the requirements of all kinds of applications. Liquid filter driers are specially designed for a high water capacity, whereas suction line filter driers feature a high acid and filtration capacity.

### Flow capacity

Flow capacity refers to ARI-Standard 710-86 and DIN 8949 and is based on a pressure drop of 0.07 bar, +30°C liquid temperature and -15°C evaporating temperature for common refrigerants.

The flow capacities are given at two levels of pressure drop: 0.07 and 0.14 bar.

For Filter drier selection under other operating conditions, use the correction factors on page 263.

### Water capacity

The water capacity for R22 refers to ARI 710-86 and DIN8948 is based on a liquid temperature of 24/52°C and an equilibrium point dryness (EPD) of 60 PPM water in refrigerant. The EPD for other refrigerants according to DIN 8949 is as follows:

Refrigerant	EPD (PPM)
R134a	50
R407C	50
R404A	50
R507	50
R410A	50

# Bi-flow Filter Driers Series BFK

Hermetic Design for Liquid Refrigerants

## Features

- Solid block style
- Integrated check valves ensure Bi-flow capability, eliminate the need for external check valves and reduce the external piping
- ODF Copper fittings for easy soldering
- Pattern flow for non-turbulent performance
- High water, acid adsorption capacity
- Temperature range TS: -40°C to +65°C
- Max. allowable pressure PS: 45 bar
- No CE marking according art. 3.3 PED 97/23 EC
- HP marking according to German Pressurized Vessel Directive
-  Underwriter Laboratories

The rated flow capacities are in accordance with ARI standard 710-86 and DIN 8949 at +30°C liquid temperature and -15°C evaporating temperature.

Selection method for other conditions:

1. Determine the correction factor (page 263) based on type of refrigerant, liquid and evaporating temperature.
2. Multiply the correction factor by cooling capacity or heating capacity whatever is more.
3. Select the filter drier according to determined capacity corresponding to flow capacity at 0.07 bar pressure drop.

# Filter Driers Series ADK

## Hermetic Design for Liquid Refrigerants

### Features

- Robust block with optimum blend of molecular sieve and activated alumina
- ODF Copper fittings for easy soldering
- High water and acid capacity
- Filtration down to 20 micron
- Temperature range TS: -40°C to +65°C
- Max. allowable pressure PS: 45 bar
- No CE marking according art. 3.3 PED 97/23 EC
- HP marking according to German Pressurized Vessel Directive

## Nominal Operating Conditions

Nominal capacity is based on the following conditions:

Refrigerant	Evaporating temperature	Liquid temperature
R744	-40°C	-10°C
R22, R134a, R404A, R407C, R407F R410A, R507	-15°C	+30°C

Correction factors for other than the nominal conditions see page 263.

# Filter Driers Series FDB

Hermetic Design, Bead Style for Liquid Refrigerants

## Features

- Compacted bead style (spring loaded)
- Optimum blend of molecular sieve and activated alumina combined with high filtration capacity
- Final filtration 20 micron
- Filtration first for more effective use of surface area of desiccant
- High water and acid capacity
- Cushioned flow for non-turbulent performance
- ODF Copper fittings for easy soldering
- Rugged steel shells
- Corrosion resistant epoxy paint
- Temperature range TS: -40°C to +65°C
- Max. allowable pressure PS: 45 bar
- No CE marking according art. 3.3 PED 97/23 EC
- HP marking according to German Pressurized Vessel Directive

## Water Adsorption Capacity

Type	Unit Size	Water adsorption capacity (net) in grams							
		25 °C liquid refrigerant				52 °C liquid refrigerant			
		R134a	R22	R407C	R404A/R507	R134a	R22	R407C	R404A/R507
FDB-03...	3	1.9	2.0	1.7	1.9	1.8	1.7	1.6	1.9
FDB-05...	5	5.5	5.8	5.0	5.5	5.2	4.9	4.5	5.3
FDB-08...	8	8.8	9.3	8.0	8.8	8.4	7.9	7.2	8.5
FDB-16...	16	17.7	18.5	15.9	17.6	16.8	15.7	14.5	17.1
FDB-30...	30	31.7	33.0	28.5	31.6	30.1	28.2	26.0	30.5
FDB-41...	41	44.2	46.2	39.9	44.1	42.1	39.4	36.3	42.7

The water capacities are according to ARI-Standard 710 for R22 and are based on a equilibrium point dryness (EPD) of 60 PPM water in refrigerant. The EPD for all other mentioned refrigerants according to DIN 8949 is 50 PPM.

## Connections

### Nominal Operating Conditions

Nominal capacity is based on the following conditions:

Refrigerant	Evaporating temperature	Liquid temperature
R22, R134a, R404A, R407C, R410A, R507	-15°C	+30°C

Correction factors for other than the nominal conditions, see page 263.

# Filter Drier Shells Series ADKS-Plus

## For Liquid- and Suction Applications with Replaceable Cores

### Features

- Rustproof Aluminum flange cover with notch hole for ease of mounting
- ODF Copper fittings for easy soldering
- Rigid core holder from steel (no plastic)
- Service friendly core holder and flange cover
- Optimum flow capacity at low pressure drop
- Temperature range TS: -45°C to +65°C
- Max. allowable pressure PS:  
34,5 bar (-10°C to +65°C)  
25,9 bar (-45°C to -10°C)
- CE marking according PED 97/23 EC
-  Underwriter Laboratories

### Nominal Operating Conditions

Nominal capacity (Qn) is based on the following conditions:

Refrigerant	Evaporating temperature	Liquid temperature
R744	-40°C	-10°C
R22, R134a, R404A, R407C, R410A, R507	-15°C	+30°C

Correction factors for other than the nominal conditions see page 263

# Filter Drier Shells Series FDH

For Liquid- and Suction Applications with Replaceable Cores

## Features

- Steel flange cover with notch hole for ease of mounting
- Plated steel ODF connections
- Rigid core holder from steel (no plastic)
- Service friendly core holder and flange cover
- Optimum flow capacity at low pressure drop
- Temperature range TS: -45°C to +65°C
- Max. allowable pressure PS:  
46 bar (-10°C to +65°C)  
25,9 bar (-45°C to -10°C)
- CE marking according PED 97/23 EC

# Filter-Drier Shells With Quick-Cap Series FDS-24

For Liquid- and Suction Applications with Replaceable Cores

## Features

- Quick-cap flange (one bolt) design makes replacing of cores in a matter of seconds
- Ideal for retrofit, reducing installation / material cost
- Ideal for refrigerant recovery / reclaim units with regular change of filter-drier
- Compatible with CFC, HCFC and HFC refrigerants
- Free volume as a receiver in FDS-24... (580 cm<sup>3</sup>)
- ODF Copper fittings for easy soldering
- Corrosion resistant powder painting of shell body
- Temperature range TS: -45°C to +65°C
- Max. allowable pressure PS:  
34,5 bar (-10°C to +65°C)  
25,9 bar (-45°C to -10°C)
- No CE marking according art.3.3 PED 97/23 EC
- HP marking according to German Pressurized Vessel Directive

# Suction Line Filters and Filter Driers Series ASF and ASD

Hermetic Design

## Features

- Minimum pressure drop due to internal construction and compacted bead style
- Service friendly with 2 Schrader valves for pressure drop measurement
- ODF Copper fittings for easy soldering
- Filtration down to 10 micron
- Temperature range TS: -45°C to +50°C
- Max. allowable pressure PS: 27,5 bar
- No CE marking according art. 3.3 PED 97/23 EC
- HP marking according to German Pressurized Vessel Directive

ASF, ASD

Nominal flow capacity at +4°C evaporating temperature (saturated condition/dew point) and a pressure drop of 0.21 bar between inlet and outlet of ASF/ASD. Correction factor for other evaporating temperatures than +4°C:

$Q_n$ : Nominal capacity

$K_s$ : Correction factor for a pressure drop corresponding 1 K saturation temperature

$Q_o$ : Required cooling capacity

$$Q_n = Q_o \times K_s$$

# Suction Line Filter and Filter Drier Shells Series BTAS

for replaceable Filters and Filter Drier Cores

## Features

- Corrosion resistant brass body ideal for suction line applications
- Extremely large filtration area for optimum flow capacity
- Low pressure drop
- Filtration down to 10 micron
- Temperature range TS: -45°C ... +50°C
- Max. allowable pressure PS: 24 bar

BTAS

# Moisture Liquid Indicators Series MIA

## Features

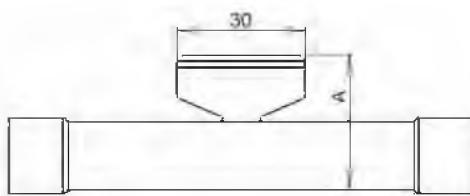

- Fully hermetic
- Corrosion free stainless steel body
- Crystal indicator element for long lifetime and reliability
- Indication of dryness according to ASERCOM recommendation
- Easy determination of moisture content
- Sensitive indicator with calibrated four colours
- Large clear viewing area
- Lightweight (only 60g MIA-M06/014)
- ODF extended tube configurations suitable for all commercial applications
- For R22, R407C, R134a, R404A, R507 and R410A together with Mineral- and POE oils
- Max. allowable pressure PS: 45 bar
- UL certified for Canada, see SA 4876 (except MIA-078)

# Moisture Liquid Indicators Series AMI

## Features

- First choice for R134a, R22, R404A, R407C, R507 and polyolester lubricants
- High accuracy of moisture indication according to ASERCOM recommendation
- Fused glass - no leakage
- Long lifetime of indicators by utilization of crystals
- Indicator with high resistance against acid and water
- Wide angle view for exact distinction of vapour and liquid
- Max. allowable pressure PS: 31 bar

# **Oil Management Components**

## **Technical Information**

Refrigeration compressors are lubricated by refrigeration oil that circulates from the compressor crankcase or housing. As refrigerant gas is discharged by the compressor, it will leave a fine oil mist that will be circulated throughout the entire system. Small amounts of oil circulating through the system will not affect the system performance. Too much refrigeration oil circulating in the system will have adverse effects on the components in the system. Circulating oil reduces the ability of the system to effectively remove the heat. Condensers, evaporators and other heat exchangers loose efficiency when coated internally with an oil film.

Refrigeration oil not returning to the compressor causes improper lubrication and eventual compressor failure. At low temperature application, refrigeration oil thickness becomes difficult to move, causing oil to be trapped in the system.

## **Oil Separator Function**

Refrigerant gas leaving the compressor through the discharge line contains refrigeration oil in a vaporous mist. As this mixture enters the oil separator, the velocity is reduced to allow oil separation to begin.

The refrigerant gas and oil mixture enters the oil separator and passes through an inlet screen, causing the fine particles to combine. Larger oil particles are formed and drop to the bottom of the oil separator.

The refrigerant gas then passes through an outlet screen to remove residual oil particles. The oil gathers in the bottom of the oil separator until a float operated needle valve opens to allow the return of oil to the compressor. Oil returns quickly to the compressor, because of the higher pressure in the oil separator than in the compressor crankcase. When the oil level has lowered, the needle valve retracts to prevent refrigerant gas from returning back to the compressor. The refrigerant gas leaves through the outlet of the oil separator and goes to the condenser.

## **Oil Level Management System Function**

This system provides oil level balancing as well as oil level monitoring including alarm and compressor shut-down functions. The oil level is measured inside the compressor's crankcase. By operating an integrated solenoid valve, missing oil can be fed from the oil receiver or from the oil separator directly into the compressor sump. If the oil level drops to a dangerous level, the alarm contact changes into alarm state. The alarm contact may be used to shut down the compressor. The integrated electronics include delay times in order to avoid short-cycling and nuisance alarms.

This system applies to compressor pack applications with multiple parallel compressor arrangements, but also to stand-alone compressor applications for compressors without differential oil pressure monitoring.

# Electronic Oil Level Management Systems OM3 / OM4 TraxOil

With Alarm Function and Compressor Shut Down

## Features

- OM4 series for CO<sub>2</sub> and R410A, OM3 for HFC refrigerants
- IP65 rating due to molded housing and electrical connection with molded cable assemblies
- 3 Zone Level Control by using precise Hall-sensor measurement, not prone to errors by foaming or light like optical sensors
- Self contained unit with oil level sensor and integral solenoid valve to manage oil level supply
- SPDT output contact for compressor shut down or alarming, rating 230 VAC/3A
- Supply 24VAC or 230VAC
- Alarm, status and 3 zone level indication by LEDs
- Easy installation by sightglass replacement and frontside installation without nuts
- Visual inspection of oil level still possible

OM4 with 24V supply

OM4 with OM-230V

- Adapters suitable for various types of compressors
- Recommended by leading compressor manufacturers
- marking under Low Voltage and EMC Directive

## Product Selection (select one item of each group)

### 1. Base Units (supplied without adapter and coil)

Type	Part No.	Max. working pressure	Time delay alarm
OM3-020	805133	35 bar	20 sec
OM3-120	805134		120 sec
OM4-020	805135	60 bar	20 sec

ECT-623	804 421	Transformer 230VAC / 24VAC, 60VA (supply of 3 pcs. OM3/OM4)
ODP-33A	800 366	Differential oil check valve 3.5 bar, inlet 15/16 -18UNF female, outlet 5/8 -18UNF male, PS 35 bar, OM3 only

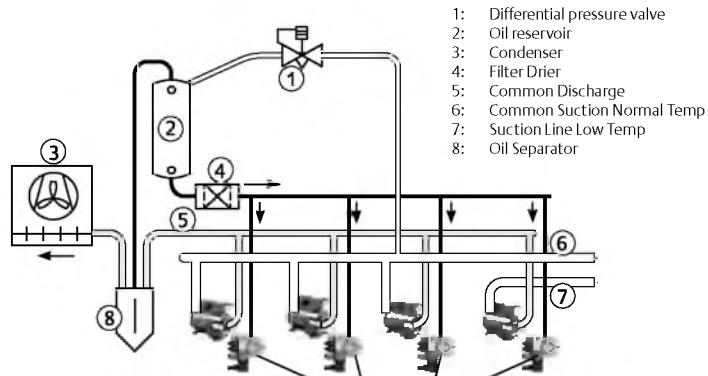

### Technical Data

Supply voltage / total power	OM3/4 with 24VAC ASC coil. 24VAC, 50/60Hz, +10/-15%, 17A  OM3/4 with OM-230V-x module. 230VAC, 50/60 Hz, 17VA
Maximum allowable pressure PS	OM3: 35 bar, OM4: 60 bar
Solenoid valve MOPD	OM3: 21 bar, OM4: 30 bar
Medium temperature	-20 to 80°C
Ambient/Storage Temperature	-20 to 50°C
Time delay filling	10 s
Time delay alarm	20 s, OM3-120: 120 s

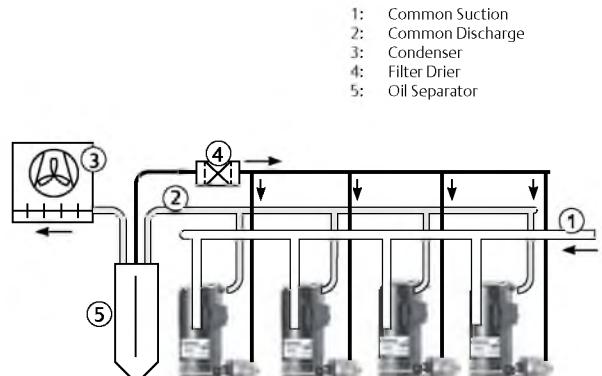

Body material	Aluminum
Screw material	Stainless Steel
Medium compatibility	HCFC, HFC, CO <sub>2</sub> , mineral, synthetic, and ester lubricants
Orientation of base unit	horizontal
Level Control	40 to 60% of sightglass height
Protection class	IP 65 (IEC529/EN 60529)
Weight	850 ... 930g (dep. on adapter)
Alarm contact	max. 3A, 230VAC, SPDT dry contact

### Application

#### Traditional low pressure oil level management system

#### High pressure oil level management system

# Electronic Oil Level Monitoring TraxOil OW4 OilWatch

The TraxOil OW4 is a self-contained system which provides oil level monitoring and alarm functionality, protecting especially compressors having no oil pump.

## Features

- Suitable for HFCs, R410A and CO<sub>2</sub>
- IP65 rating due to molded housing and new electrical connection with molded cable Assemblies
- 3 Zone Level Control by using precise Hall-sensor measurement, not prone to errors by foaming or light like optical sensors
- CE marking under Low Voltage and EMC Directive
- SPDT output contact for compressor shut down or alarming, rating 230VAC / 3A
- Easy installation by sight-glass replacement and front side mounting without nuts
- Self contained unit with oil level sensor
- Alarm, status and 3 zone indication by LED's
- Supply 24V AC, 50/60Hz

Medium compatibility	HFC, HFC, CO <sub>2</sub> , mineral, synthetic and Ester lubricants

Materials: Body and Adaptor Screws Sight Glass	aluminum (EN AW 6060) stainless steel (ISO 4762) nickel-plated steel (1.05.03 DIN EN 10027)
Orientation of base unit: Level control	horizontal, +/- 1° 40% to 60% sight glass height
Alarm contact:	max. 3A, 230VAC SPDT dry contact
Time Delay Alarm:	20 sec
Protection class	IP 65 (IEC529/EN 60529)
Weight	850 ... 920g incl. adapter

# Oil Separator Series OS

## Features

- Three different construction styles:
  - Hermetic
  - Top flange
  - Bottom flange with support bracket
- Stainless steel needle valve and floater
- Permanent magnet to catch iron particles out of the system
- Corrosion resistant epoxy powder painting
- ODF Copper fittings for easy soldering
- Temperature range TS: -10°C ... +150°C
- Max. allowable pressure PS: 31 bar
- CE marking according PED 97/23 EC

\* applied higher module as required

## Capacity Data For Other Than Nominal Operating Conditions

Nominal capacities at +38°C condensing temperature (+38°C bubble point or +43°C dew point for R407C), +4°C evaporating temperature (saturated temperatures / dew point) and 1 K liquid subcooling at the inlet of the expansion valve.

Correction factor for other evaporating temperatures than nominal:

$$Q_n = Q_o \times K_t$$

$Q_n$ : Nominal capacity

$K_t$ : Correction factor for a pressure drop corresponding 1 K saturation temperature

$Q_o$ : Required cooling capacity

### Correction Factors

Refrigerant	Condensing Temperature °C	Correction factor $K_t$						
		10	0	-10	-20	-30	-40	-50

# **Suction Accumulators, Ball Valves and Oil Test Kit**

## Suction Accumulators

### Features

- Hermetic design
- ODF Copper fittings for easy soldering
- Corrosion resistant epoxy powder painting
- Internal orifice with strainer for optimum oil return
- Temperature range TS: -45°C to +65°C
- Max. allowable pressure PS:
  - 20.7 bar (-10°C to +65°C)
  - 15.5 bar (-45°C to -10°C)
- CE marking for certain types according PED 97/23 EC
- HP marking for certain types according German pressurised vessels directive

## Ball Valves Series BVE / BVS

### Features

- BVS version with schrader valve
- Two threads at valve body for easy mounting
- Hermetic design
- Max. allowable pressure PS: 45 bar
- Compatible for high pressure refrigerants as R410A and CO<sub>2</sub> (sub-critical)
- Light weight design
- Virgin PTFE seat gaskets
- Bi-directional flow characteristics
- Valve cap retained by strap attached to main body
- Pressure relief port design
- UL approval and CE marking acc. PED 97/23 EC
- Applied Standards EN 12284, EN 378, EN12420, PED 97/23/EC, RoHS 2002/95/EC
- To protect valve from un-authorized use a special cap is available as accessory (see below)

### Technical Data

Max. allowable pressure PS	45 bar
Test pressure PT	49.5 bar
Medium temperature TS	-40 ... 120°C (150°C short term)
Medium compatibility	HFC, HCFC, CO <sub>2</sub> , Mineral, Synthetic and Polyol-Ester (POE) lubricants

**Special Seal Caps** to protect valve from unauthorized use

BVE / BVS Valve Size	Part No.	Thread (3)	Quantity per pack
1/4" ... 7/8" (6 ... 22mm)	806 770	M18x1	10 pcs
1-1/8" ... 1 3/8" (28 ... 35mm)	806 771	M27x1	10 pcs
1-5/8 (42 mm) ... 2-5/8"	806 772	M36x1	10 pcs

## Acid Test Kit Series AOK

### Features

- Quick & easy test kit
- Universal acid test kit for use with all oils:  
Mineral, POE, etc.
- By changing the percentage of oil sample taken, the acid number of the oil can be accurately determined
- Phase separation of the chemicals in the kit provide a positive colour change regardless of the colour and condition of the oil

Type	Part No.
<b>AOK-U01</b>	<b>804 166</b>

## Ball Valves

BVE/BVS special cap to protect valve from un-authorized use (10 pcs)		
1/4" - 7/8" (6-22mm)		806 770
1 1/8" - 1 3/8" (28-35mm)		806 771
1 5/8" - 3 1/8" (42-54mm)		806 772

## Conversion Table

### Power

kW / h = Kcal / h : 860	Kcal / h = kW / h x 860
kW = US ton of refrigeration : 0,284	US ton of refrigeration = kW x 0,284
kW = BTU / h : 3413	BTU / h = kW x 3413

### Temperature

$^{\circ}\text{C} = (^{\circ}\text{F} - 32) : 1,8$	$^{\circ}\text{F} = (^{\circ}\text{C} \times 1,8) + 32$
--	---

### Pressure

bar = PSI : 14,5 1 bar = 100 000 Pascal	PSI = bar x 14.5 100 Pascal = 1 mbar
--	---

### Connections

## Standard Terms and Conditions Of Sale – Products & Services

### 1. DEFINITIONS:

In these Terms and Conditions of Sale, "Seller" means one of the three Emerson companies mentioned in the title; "Buyer" means the person, firm, company or corporation by whom the order is given; "Goods" means the goods (including any Software and Documentation, as defined in Clause 9) described in Seller's Acknowledgement of Order form; "Services" means the services described in Seller's Acknowledgement of Order Form; "Contract" means the written agreement (including these Terms and Conditions) made between Buyer and Seller for the supply of the Goods and/or provision of Services; "Contract Price" means the price payable to Seller by Buyer for the Goods and/or Services and "Seller Affiliate" means an Emerson Group company which is an affiliate within the meaning of Section 15 AktG [German Stock Corporation Act].

### 2. THE CONTRACT:

2.1 All orders must be in writing and are accepted subject to these Terms and Conditions of Sale. No terms or conditions put forward by Buyer and no representations, warranties, guarantees or other statements not contained in Seller's quotation or Acknowledgement of Order nor otherwise expressly agreed in writing by Seller shall be binding on Seller.

2.2 The Contract shall become effective only upon the date of acceptance of Buyer's order on Seller's Acknowledgement of Order form. If the details of the Goods or Services described in Seller's quotation differ from those set out in the Acknowledgement of Order Form the latter shall apply.

2.3 No alteration or variation to the Contract shall apply unless agreed in writing by both parties. However, Seller reserves the right to effect minor modifications and/or improvements to the Goods before delivery provided that the performance of the Goods is not adversely affected and that neither the Contract Price nor the delivery date is affected.

### 3. VALIDITY OF QUOTATION AND PRICES:

3.1 Unless previously withdrawn, Seller's quotation is open for acceptance within the period stated therein or, when no period is so stated, within thirty days after its date.

3.2 Prices are firm for delivery within the period stated in Seller's quotation and are exclusive of (a) Value Added Tax and (b) any similar and other taxes, duties, levies or other like charges arising outside Germany in connection with the performance of the Contract.

3.3 Prices (a) are for Goods delivered EXW (Ex works) Seller's shipping point, exclusive of freight, insurance and handling and (b) unless otherwise stated in the Seller's quotation, are exclusive of packing. If the Goods are to be packed, packing materials are non-returnable.

### 4. PAYMENT:

4.1 Payment shall be made: (a) in full without set-off, counterclaim or withholding of any kind (save where and to the extent that this cannot by law be excluded); and (b) in the currency of Seller's quotation within thirty days of receipt of invoice unless otherwise specified by Seller's Finance Department. Goods will be invoiced at any time after their readiness for despatch has been notified to Buyer. Services will be invoiced monthly in arrears or, if earlier, upon completion. Without prejudice to Seller's other rights, Seller reserves the right to: (i) charge interest on any overdue sums at 8% above the base lending rate of Section 247 BGB (German Civil Code) during the period of delay; (ii) suspend performance of the Contract (including withholding shipment) in the event that Buyer fails or in Seller's reasonable opinion it appears that Buyer is likely to fail to make payment when due under the Contract or any other contract; and (iii) under the same conditions require reasonable security for payment.

4.2 Customer may set off counterclaims only if recognised or non-appealable. A right of retention may be exercised by Customer only if it concerns the same contractual relationship.

### 5. DELIVERY PERIOD:

5.1 Unless otherwise stated in Seller's quotation, all periods stated for delivery or completion run from the Effective Date and are to be treated as estimates only not involving any contractual obligations.

5.2 If Seller is delayed in or prevented from performing any of its obligations under the Contract due to the acts or omissions of Buyer or its agents (including but not limited to failure to provide specifications and/or fully dimensioned working drawings and/or such other information as Seller reasonably requires to proceed expeditiously with its obligations under the Contract), the delivery/completion period and the Contract Price shall both be adjusted accordingly.

5.3 If delivery is delayed due to any act or omission of Buyer, or if having been notified that the Goods are ready for despatch, Buyer fails to take delivery or provide adequate shipping instructions, Seller shall be entitled to place the Goods into a suitable store at Buyer's expense. Upon placing the Goods into the store, delivery shall be deemed to be complete, risk in the Goods shall pass to Buyer and Buyer shall pay Seller accordingly.

### 6. FORCE MAJEURE:

6.1 The Contract (other than Buyer's obligation to pay all sums due to Seller in accordance with the Contract) shall be suspended, without liability, in the event and to the extent that its performance is prevented or delayed due to any circumstance beyond the reasonable control of the party affected, including but not limited to: Act of God, war, armed conflict or terrorist attack, riot, fire, explosion, accident, flood, sabotage; governmental decisions or actions (including but not limited to prohibition of exports or re-exports or the failure to grant or the revocation of applicable export licenses), or labour trouble, strike, lockout or injunction. Seller shall have no obligation to supply hardware, software or technology or to provide services in the absence of government permits or fulfilment of statutory conditions of exemption from such permits within the framework of import and export control (in particular, according to the regulations applicable in the United States, the European Union and the jurisdiction in which Seller has its registered office or from which components of the Goods are supplied) and the underlying circumstances could not be foreseen by Seller and are outside of Seller's sphere of influence. In the event of revocation of issued government permits or in the event of a change in the applicable statutory import and export control regulations such that Seller is prevented from fulfilling the contract, Seller is discharged from the contractual obligation without any liability of Seller.

6.2 If either party is delayed or prevented from performance of its obligations by reason of this Clause for more than 180 consecutive calendar days, either party may terminate the then unperformed portion of the Contract by notice in writing given to the other party, without liability provided that Buyer shall be obliged to pay the reasonable cost and expense of any work in progress and to pay for all Goods delivered and Services performed as at the date of termination.

### 7. INSPECTION, TESTING, AND CALIBRATION:

7.1 Goods will be inspected by Seller or manufacturer and, where practicable, submitted to Seller's or manufacturer's standard tests before despatch. Any additional tests or inspection (including inspection by Buyer or its representative, or tests in the presence of Buyer or its representative and/or calibration) or the supply of test certificates and/or detailed test results shall be subject to Seller's prior written agreement and Seller reserves the right to charge therefor; if Buyer or its representative fail to attend such tests, inspection and/or calibration after seven days' notice that the Goods are ready therefor, the tests, inspection and/or calibration will proceed and shall be deemed to have been made in the presence of Buyer or its representative and the Seller's statement that the Goods have passed such testing and/or inspection and/or have been calibrated shall be conclusive.

7.2 Buyer's warranty rights are subject to Buyer's proper compliance with Buyer's inspection and complaint obligations set forth in Section 377 of the German Commercial Code (HGB).

### 8. DELIVERY, RISK & TITLE:

8.1 Unless otherwise expressly stated in the Contract, the Goods will be delivered Carriage Paid To (CPT) the destination named in the Contract; freight, packing and handling will be charged at Seller's standard rates. Risk of loss of or damage to the Goods shall pass to Buyer upon delivery as aforesaid and Buyer shall be responsible for insurance of the Goods after risk has so passed. Alternatively, if it is expressly stated in the Contract that Seller is responsible for the insurance of the Goods after their delivery to the carrier, such insurance will be charged at Seller's standard rates. "Ex-works", "FCA", "CPT" and any other delivery terms used in the Contract shall be defined in accordance with the latest version of Incoterms.

### 9. DOCUMENTATION AND SOFTWARE:

9.1 Title to and ownership of the copyrights in software and/or firmware incorporated into or provided for use with the Goods ("Software") and documentation supplied with the Goods ("Documentation") shall remain with the relevant Seller Affiliate (or such other party as may have supplied the Software and/or Documentation to Seller) and is not transferred hereby to Buyer.

9.2 Except as otherwise provided herein, Buyer is hereby granted a non-exclusive, royalty-free licence to use the Software and Documentation in conjunction with the Goods, provided that and for so long as the Software and Documentation are not copied (unless expressly authorised by applicable law) and Buyer holds the Software and Documentation in strict confidence and does not disclose them to others, or permit others to have access to them (other than Seller's standard operating and maintenance manuals). Buyer may transfer the foregoing licence to another party which purchases, rents or leases the Goods, provided the other party accepts and agrees in writing to be bound by the conditions of this Clause 9.

9.3 Notwithstanding Sub-clause 9.2, Buyer's use of certain Software, (as specified by Seller and including but not limited to control system and AMS Software) shall be governed exclusively by the applicable Seller Affiliate or third party licence agreement.

9.4 Seller and Seller Affiliates shall retain ownership of all inventions, designs and processes made or evolved by them and save as set out in this Clause 9 no rights in intellectual property are hereby granted.

### 10. LIABILITY FOR DEFECTS OF QUALITY:

10.1 Seller warrants that upon passing of the risk the Goods and Services will have the quality agreed upon. Unless otherwise agreed, the quality agreed upon shall meet Seller's specifications as valid and published at the time of the order confirmation.

10.2 If, upon passing of the risk, the Goods or Services do not have the quality agreed upon, Seller warrants to provide subsequent performance by either, at its option, repairing or replacing the concerned parts (subsequent rectification) or by replacing the Goods or Services by such Goods or Services which are free from defects (subsequent delivery).

10.3 Seller may rectify any defect several times and may decide at its discretion to change from rectification to subsequent delivery. Seller shall be responsible for all costs incurred in connection with its subsequent performance, especially the transport, shipping, labour and material cost, unless such costs are incurred as a result of the Goods being taken to a place other than the place of performance.

## Emerson Climate Technologies GmbH, Emerson Retail Services Europe GmbH

10.4 Buyer may set a reasonable period of at least four (4) weeks to Seller for him to provide subsequent performance and, if subsequent performance fails during such period, may demand reduction of the Contract Price after expiry of that period or, unless the defect is insignificant, may rescind the Contract. Damages may only be claimed in line with Clause 14.

10.5 Any claims and rights based on defects will become time-barred, except in the case of intent, after expiry of twelve (12) months since taking into operation of the Goods, however no later than eighteen (18) months since delivery. Claims to damages based on defects will become time-barred after expiry of the statutory period if they result from a violation of another's life, health or body, or from Seller's gross negligence.

10.6 Seller assumes no warranty for normal wear and tear, material provided by Buyer, processing of the Goods made by Buyer, damage due to improper storage, installation or operation or due to inadequate maintenance, or damage resulting from any modification or repair not approved beforehand by Seller in writing. Seller will not be liable where any non-authorised software or non-authorised spare or replacement parts are used. Any costs incurred by Seller for examining and removing such defects will be borne by Buyer upon demand. Buyer will always be responsible alone for the completeness and correctness of any information provided by it.

10.7 Regarding products or Services sourced by Seller from a third party (other than a Seller Affiliate) for resale to Buyer, Seller assigns to Buyer all warranty rights against such third party. In addition, Seller remains obliged to assume the guarantees set forth in the preceding clauses towards Buyer, however, only under the restriction that Buyer has beforehand unsuccessfully tried to execute the assigned warranty rights against the third party.

### 11. LIABILITY FOR PROPRIETARY RIGHTS INFRINGEMENTS:

11.1 Seller warrants that upon passing of the risk no patents or other proprietary rights of third parties exist which may be claimed with respect to the Goods or Services if these are used as intended. Clauses 10.2 to 10.5 and 10.7 shall apply correspondingly.

11.2 Seller's liability shall be excluded where a third party patent or proprietary right is infringed because Seller has adhered to a design provided by Buyer or has complied with an instruction given by Buyer, or because the Goods are used in a manner, for a purpose, in a country, or in connection with other goods or services, without this having been communicated to Seller before execution of the Contract.

11.3 During the period of Seller's warranty, Buyer has the obligation to inform Seller in writing as promptly as possible in the event that a third party claims any patent or other proprietary right or asserts any claims in or out of court with respect to the Goods or Services. Before recognising any claim advanced by a third party in or out of court, Buyer shall give Seller the opportunity to comment. At its request, Seller shall be given the authority to handle the negotiations or legal dispute with such third party at its own cost and responsibility. Buyer shall be liable to Seller for any damage sustained by it as a result of a culpable violation of said obligations.

11.4 Buyer warrants that the use of a design provided by it or compliance with an instruction given by it will not lead to Seller infringing any patents or other proprietary rights when performing its contractual obligations. Buyer agrees to indemnify and hold Seller harmless against any reasonable cost and damages incurred by Seller as a result of Buyer's breach of this warranty.

### 12. DAMAGES:

12.1 Seller shall be liable to Buyer only for damage caused with intent or gross negligence. In the event of breach of material contractual obligations, Seller shall, however, be liable for each fault of its personnel (statutory representatives, executive employees and other persons employed in the performance of its obligations) causing damage.

12.2 Except in case of intentional causation of damage by personnel of Seller or causation of damage with gross negligence by statutory representatives or executive employees of Seller, Seller shall not be liable for compensation for indirect damage and, in particular, Seller shall not be liable for compensation for loss of profit, unless such damage is covered by the protective purpose of a warranty explicitly assumed.

12.3 Except in case of intentional causation of damage by personnel of Seller or causation of damage with gross negligence by statutory representatives or executive employees of Seller, the liability of Seller shall, in each case, be limited in terms of amount to the damage which is typically foreseeable in the time of conclusion of the contract.

12.4 Claims to damages which result from the violation of another's life, body or health, from the violation of a warranty given by Seller expressly in writing as well as damage claims under the Product Liability Act shall remain unaffected.

### 13. STATUTORY AND OTHER REGULATIONS:

13.1 If Seller's obligations under the Contract shall be increased or reduced by reason of the making or amendment after the date of Seller's quotation of any law or any order, regulation or bye-law having the force of law that shall affect the performance of Seller's obligations under the Contract, the Contract Price and delivery period shall be adjusted accordingly and/or performance of the Contract suspended or terminated, as appropriate. A price adjustment shall not be implemented if the delivery is to be carried out within 4 months after the closing of the Contract.

13.2 Except to the extent otherwise required by applicable law, Seller shall have no responsibility for the collection, treatment, recovery or disposal of (i) the Goods or any part thereof when they are deemed by law to be 'waste' or (ii) any items for which the Goods or any part thereof are replacements. If Seller is required by applicable law, including waste electrical and electronic equipment legislation, European Directive 2002/96/EC (WEED) and related legislation in EU Member States, to dispose of 'waste' Goods or any part thereof, Buyer shall, unless prohibited by applicable law, pay Seller, in addition to the Contract Price, either (i) Seller's standard charge for disposing of such Goods or (ii) if Seller does not have such a standard charge, Seller's costs (including all handling, transportation and disposal costs and a reasonable mark-up for overhead) incurred in disposing of such Goods.

13.3 Buyer's personnel shall, whilst on Seller's premises, comply with Seller's applicable site regulations and Seller's reasonable instructions, including but not limited to those relating to safety, security and electrostatic discharge.

### 14. COMPLIANCE WITH LAWS

Buyer agrees that all applicable import, export control and sanctions laws, regulations, orders and requirements, as they may be amended from time to time, including without limitation those of the United States, the European Union and the jurisdictions in which Seller and Buyer are established or from which items may be supplied, and the requirements of any licenses, authorisations, general licences or licence exceptions relating thereto will apply to its receipt and use of hardware, software, services and technology. In no event shall Buyer use, transfer, release, export or re-export any such hardware, software or technology in violation of such applicable laws, regulations, orders or requirements or the requirements of any licences, authorisations or licence exceptions relating thereto. Buyer agrees furthermore that it shall not engage in any activity that would expose the Seller or any of its affiliates to a risk of penalties under laws and regulations of any relevant jurisdiction prohibiting improper payments, including but not limited to bribes, to officials of any government or of any agency, instrumentality or political subdivision thereof, to political parties or political party officials or candidates for public office, or to any employee of any customer or supplier. Buyer agrees to comply with all appropriate legal, ethical and compliance requirements.

### 15. DEFAULT, INSOLVENCY AND CANCELLATION:

Seller shall be entitled, without prejudice to any other rights it may have, to cancel the Contract forthwith, wholly or partly, by notice in writing to Buyer, if Buyer is in default of any of its obligations under the Contract and fails, within 30 (thirty) days of the date of Seller's notification in writing of the existence of the default, either to rectify such default if it is reasonably capable of being rectified within such period or, if the default is not reasonably capable of being rectified within such period, to take action to remedy the default.

### 16. SUPPLEMENTARY TERMS AND CONDITIONS:

If the Goods comprise or include a control system, Seller's Supplementary Terms and Conditions Applicable to the Supply of Control Systems and Related Services shall apply to the control system and related services only. Such Supplementary Terms and Conditions shall take precedence over these Standard Terms and Conditions of Sale; copies are available from Seller upon request.

### 17. MISCELLANEOUS:

17.1 No waiver by either party with respect to any breach or default or of any right or remedy and no course of dealing, shall be deemed to constitute a continuing waiver of any other breach or default or of any other right or remedy, unless such waiver is expressed in writing and signed by the party to be bound.

17.2 If any clause, sub-clause or other provision of the Contract is invalid or unenforceable, this shall not affect the validity of the remainder of the Contract. Should one of the clauses be invalid or unenforceable, the parties oblige themselves to replace the invalid or unenforceable clause by such a clause which comes closest to the intended economic purpose of the invalid clause.

17.3 Buyer shall not be entitled to assign its rights or obligations hereunder without the prior written consent of Seller.

17.4 Seller enters into the Contract as principal. Buyer agrees to look only to Seller for due performance of the Contract.

17.5 GOODS AND SERVICES PROVIDED HEREUNDER ARE NOT SOLD OR INTENDED FOR USE IN ANY NUCLEAR OR NUCLEAR RELATED APPLICATIONS. Buyer (i) accepts Goods and Services in accordance with the foregoing restriction, (ii) agrees to communicate such restriction in writing to any and all subsequent purchasers or users and (iii) agrees to defend, indemnify and hold harmless Seller and Seller's Affiliates from any and all claims, losses, liabilities, suits, judgements and damages, including incidental and consequential damages, arising from use of Goods and Services in any nuclear or nuclear related applications, whether the cause of action based in tort, contract or otherwise, including allegations that Seller's liability is based on negligence or strict liability.

17.6 The Contract shall in all respects be construed in accordance with the laws of the Federal Republic of Germany excluding, however, any effect on such laws of the 1980 Vienna Convention on Contracts for the International Sale of Goods, and to the fullest extent permitted by law, shall be without regard to any conflict of laws or rules which might apply the laws of any other jurisdiction. All disputes arising out of the Contract shall be subject to the exclusive jurisdiction of the Berlin courts. However, Seller is entitled to sue Buyer in the court of Buyer's residence as well.

17.7 The headings to the Clauses and paragraphs of the Contract are for guidance only and shall not affect the interpretation thereof.

17.8 All notices and claims in connection with the Contract must be in writing.
